Revised February 1, 2024

CALIFORNIA ENVIRONMENTAL QUALITY ACT ENVIRONMENTAL CHECKLIST FORM INITIAL STUDY (UP 20-77, IS 20-92)

1. Project Title: Knapp Farms
2. Permit Numbers: Major Use Permit UP 20-77
Initial Study IS 20-92
3. Lead Agency Name and Address: County of Lake
Community Development Department
Courthouse, 3rd Floor, 255 North Forbes Street
Lakeport, CA 95453
4. Contact Person: Andrew Amelung, Cannabis Program Manager
Eric Porter, Associate Planner
(707) 263-2221
5. Project Location(s): 4379 and 4457 New Long Valley Road, Clearlake
Oaks APN: 006-009-23 and 53
6. Project Sponsor's Name & Address: Raphael Knapp
4874 Lynn Street
Los Angeles, CA 90042
7. General Plan Designation: Rural Lands
8. Zoning: "RL-B5-WW", Rural Lands – Special Lot Density –
Waterway (APN 006-009-23)

"RL-FF-B5-WW", Rural Lands – Floodway Fringe -
Special Lot Density – Waterway (APN 006-009-53)
9. Supervisor District: District 3
10. Flood Zone: Lot 23 - "X", low risk of flooding
Lot 53 – "X" and "A", flood plain (north portion of lot 53)
11. Slope: Lot 23 – Flat on North Portion of Lot; Mostly over 30%
on South Portion of Lot

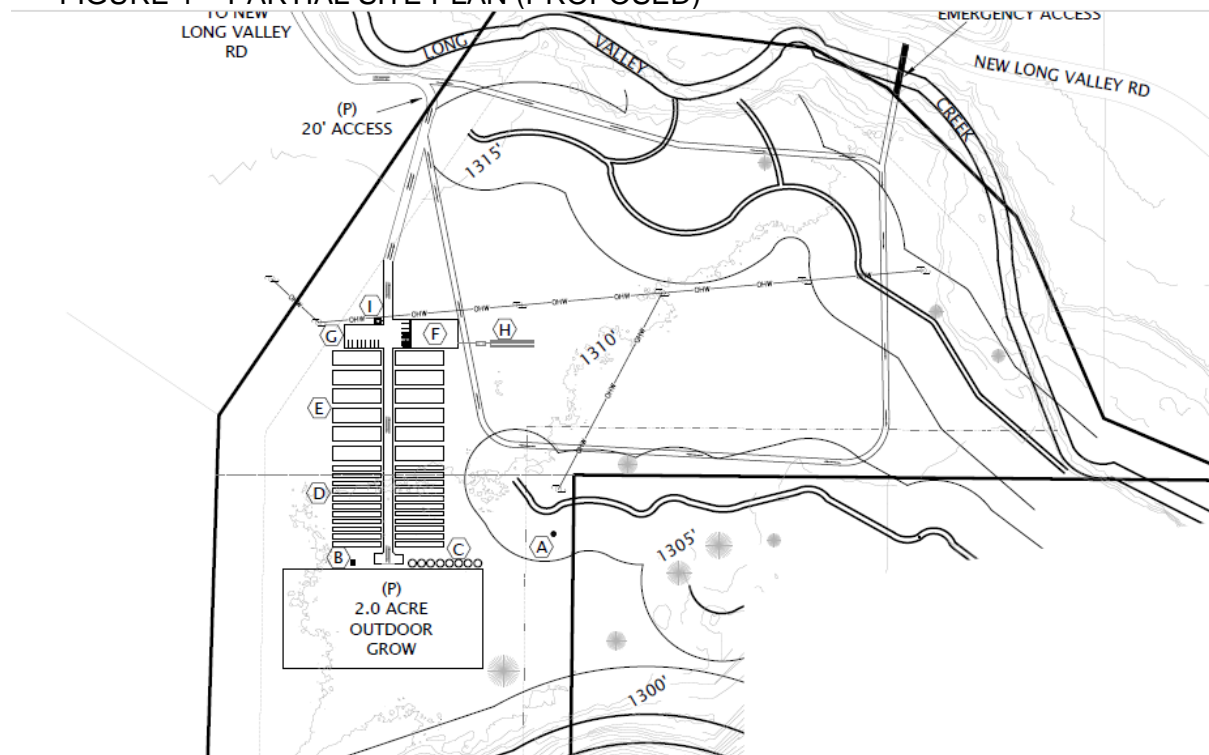

Lot 53 – Flat on Southern 2/3 of Lot; some slope by
creek in Northern portion of Lot

- | | |
|----------------------------------|---|
| 12. Fire Hazard Severity Zone: | California State Responsibility Area (CALFIRE):
High Fire Risk |
| 13. Earthquake Fault Zone: | None mapped |
| 14. Dam Failure Inundation Area: | Not located within Dam Failure Inundation Area |
| 15. Parcel Sizes: | 68.41 Acres (APN 006-009-23)
30.85 Acres (APN 006-009-53)
99.26 Acres Combined |

16. Description of Project:

Cannabis cultivation operation at 4457 New Long Valley Road near Clearlake Oaks, CA on Lake County APNs 006-009-23 & 53 (Project Property). The proposed commercial cannabis cultivation operation would be developed in two stages. During the first stage of site development, the proposed cultivation operation would be composed of four acres (174,240 ft²) of outdoor cultivation/canopy area, a 6,000 ft² Processing Facility (metal building), and a 120 ft² Pesticides & Agricultural Chemicals Storage Area (wooden shed). During the second stage of site development, twelve 3,000 ft² greenhouses and twenty-two 1,000 sq. ft. hoop houses will be constructed within the footprint of two of the four acres of outdoor cultivation/canopy area established in the first stage of site development. The proposed cultivation operation would contain up to 174,240 ft² of Outdoor Canopy after the first stage of site development, and up to 87,120 ft² of Outdoor Canopy and 44,000 sq. ft. of Mixed-Light Canopy after the second stage of site development.

FIGURE 1 – PARTIAL SITE PLAN (PROPOSED)

Source: Material Submitted by Applicant

Construction

Equipment

The following equipment is expected to be required to construct the proposed project facilities:

- Excavator,
- Backhoe,
- Pickup trucks
- Water truck

Construction Details

Construction during the first stage of site development is projected to last up to eight weeks primarily to build the 6,000 sq. ft. metal processing building. Construction during the second stage of site development is anticipated to last up to twelve weeks to construct the greenhouses and hoop houses. Construction of both stages of site development will take place Monday through Saturday, between 7 a.m. and 7 p.m. during construction days. Included in both stages of site development is a 6' tall screening fence around the proposed outdoor cultivation areas. The applicant proposes fabric mesh as the screening material for the fence, however fabric is not durable and is no longer permitted. The applicant will be required to use either chain link with slats, or solid wood or metal fencing.

Vehicle Trips During Construction

The County estimates that between 8 and 16 daily trips will result during construction, plus up to four weekly deliveries. If the first stage of site development takes eight weeks of construction time, a total of about 576 vehicle trips is probable over the eight-week period of time. If the second stage of site development takes twelve weeks of construction time, a total of about 864 vehicle trips is probable over the twelve-week period of time. The County estimates that between 4 and 8 employees will work during construction. This will result in up to 16 trips per day excluding deliveries. Deliveries during construction will likely generate up to four additional trips per week.

Post Construction

Hours of Operation/Work Shifts and Traffic Generation

The proposed project will operate from 7 a.m. to 7 p.m., Monday through Sunday. Estimated to have up to four employees during normal operations, and up to ~~eight~~ six employees during peak harvest season. Vehicle trips per day during operations are estimated up to ~~16~~ 12 daily employee trips, and 2 deliveries per week on average. A total of ~~114~~ 86 weekly trips are projected. Assuming a 270 day cultivation season, a total of about ~~4,332~~ 3,316 trips annually are anticipated.

The nearest populated area is Clearlake Oaks, which for purposes of estimating total vehicle impacts is considered to be the living area for employees. Clearlake Oaks is located about ~~4~~ 16 miles from the cultivation site. Assuming ~~4,332~~ 3,316 annual vehicle trips from ~~four~~ miles away, a total of ~~17,328~~ 53,056 vehicle miles per year can be anticipated. Each car produces an average of 404 grams of CO₂ per vehicle mile traveled (source: EPA). Total anticipated CO₂ emissions is ~~7,000,512~~ 21,434,624 grams of CO₂ per year, or 21.4 tons. Lake County has no thresholds for air emissions and uses Bay Area Air Quality Management District's (BAAQMD) standards for thresholds of significance. The BAAQMD's threshold is

1,100 tons of CO₂ per project. Based on this threshold amount, it would take this project decades to meet the BAAQMD threshold for 'significant impact' to air quality.

Water Analysis

Hydrology Reports

Two Hydrology Reports ("Report 1 and 2") were prepared for this project by Western Groundwater Surveyors, Inc. Report 1 is dated September 21, 2021; Report 2 is dated December 27, 2021. The Reports evaluate annual water demand for the project; aquifer capacity and recharge rate; competitive well demands, and well data for the on-site well. There is an existing pond on site that Report #1 is recommending be removed and the original water course restored.

Report #2 evaluated the aquifer in greater detail than Report #1. Report #2 identifies the geology in this area as being older alluvial fan deposits and alluvial terrace deposits. Water is found at a static groundwater depth of 29 feet. Report #2 identifies the aquifer boundary as being about 1.05 miles side, tapering down to about 0.17 miles at the convergence of the two nearest creeks. The total recharge area of the aquifer is about 569 acres in size.

Well Test

There is one existing permitted on-site well that was drilled to a depth of 54 feet. The well was tested by Jim's Pumps on September 22, 2021. The three-hour test yielded an average output of 100 gallons per minute (GPM) with virtually no drawdown, indicating a strong water table at this location. According to Report #1, the well is located about 415 feet from the nearest surface water source, a Class 2 stream on the property. A second test was conducted by Alpha Analytical Laboratories Inc. on October 13, 2021. The second test was limited to evaluating water quality rather than quantity; the report determined that the water produced by the well did not contain any toxic elements that might otherwise harm people and plants.

According to the site plans submitted for this project, the applicant is proposing eight (8) 2,500 gallon water tanks for irrigation purposes with an additional 5,000-gallon metal water storage tank for fire suppression purposes.

Projected Water Use

Report #2 projects the annual water demand from the Knapp Farm as being about 7.92 acre-feet per year, or about 2,580,700 gallons per year. The Report states that competing wells demand about 203.1 acre-feet per year, or about 66,007,000 gallons of water per year.

The project will likely use a drip irrigation system to disperse water to the plants, although this is not specified within the report. The plants will be in fabric pots or raised beds; the drip irrigation systems are typically used for this type of outdoor cultivation.

Aquifer Data

The Report states that the 569 acre aquifer recharge area, and the total estimated storage capacity of the aquifer is about 8,080 acre-feet of water with a total usable amount of water being 20% of the total water storage, or about 1,600 acre-feet of usable water. The total annual demand represents about 13% of the total usable amount of water in this aquifer.

The Report estimates that annual recharge of the aquifer is about 737 acre-feet per year, about 5 times the amount of total demand on this aquifer.

Conclusion Regarding Water

The Report states that the completed well is of sufficient yield to irrigate the proposed project without over-drafting the aquifer.

Energy Usage

According to the applicant's application material, the proposed use would rely on grid power and would consist of four acres of outdoor cultivation area during the first stage of site development, and three total acres of cannabis canopy during the second stage of site development, however the project would have twelve 3,000 sq. ft. greenhouses in interior lighting and carbon filtration systems during the second stage of site development, which will increase the power demand by an estimated 600 amps.

There are no grid capacity issues at this location. PG&E was notified of this project, and sent a initial response acknowledging receipt of the Request for Review, but did not submit any project-related comments.

Solid Waste Management

Annual non-hazardous solid waste generated by project operations is estimated to be about 500 pounds per year per acre of cannabis plant material, or about 1 ton per year from this project. All non-hazardous waste will be hauled to the nearest waste disposal transfer station located in Lakeport. There are no capacity issues at the South Lake Waste Facility in Clear Lake, and it appears that there are no conflicts with the ability of the site to generate solid waste to a usable disposal site.

Wastewater Management

The site will rely on portable ADA-compliant restroom and wash station on a temporary basis until the processing building is built. The portable restrooms will be serviced at regular intervals by the applicant's septic company.

Stormwater Management

A Stormwater Management Plan (SMP) has been prepared and submitted to Lake County Planning Department; the Plan identifies the method of stormwater containment in the cultivation area (straw wattles), which are typical for this type of cultivation activity. The cultivation area is set back more than 100 feet from all water courses on site. Setbacks from any surface water channel or above-ground water storage facility is 100 feet or more as is required by Article 27.11(at) of the Lake County Code.

17. Surrounding Land Uses and Setting:

All properties surrounding the project property are zoned "RL" Rural Lands. The following neighboring lot characteristics are present. See Figure 2, next page for map.

- North: "RL-FF-WW-B5", Rural Lands – Floodway Fringe – Waterway – Special Lot Density. The parcels are between 9 and 53 acres in size and are mostly developed with single family dwellings that are served by New Long Valley Road.
- East: "RL-FF-WW-B5", Rural Lands – Floodway Fringe – Waterway – Special Lot Density. Parcels are between 9 and 58 acres in size and are mostly developed with dwellings, however the lot adjacent to lot 23 is undeveloped.
- South: "RL-WW", Rural Lands – Waterway. Parcel is 315.07 acres in size and is developed with a dwelling and a small hobby farm.

- West: “RL-WW-B5”, Rural Lands – Waterway – Special Lot Density. Parcel is 85.83 acres in size and is undeveloped with a seasonal water course.
- West: “APZ-WW”, Agriculture Preserve - Waterway. Parcel is 180.86 acres in size and is developed with a dwelling and agricultural uses.

FIGURE 2 – ZONING OF SITE AND VICINITY

Source: Lake County Parcel Viewer

18. Other public agencies whose approval is required (e.g., Permits, financing approval, or participation agreement).

The extent of this environmental review falls within the scope of the Lead Agency, the Lake County Community Development Department, and its review for compliance with the Lake County General Plan, the Northshore Area Plan, the Lake County Zoning Ordinance, and the Lake County Municipal Code. Other organizations in the review process for permitting purposes, financial approval, or participation agreement can include but are not limited to:

- Lake County Community Development Department
- Lake County Department of Environmental Health
- Lake County Air Quality Management District
- Lake County Department of Public Works
- Lake County Department of Public Services
- Lake County Agricultural Commissioner
- Lake County Sheriff Department
- Northshore Fire Protection District,
- Central Valley Regional Water Quality Control Board
- State Water Resources Control Board
- California Department of Forestry & Fire Protection (Calfire)
- California Department of Fish & Wildlife (CDFW)

- California Department of Food and Agriculture (CalCannabis)
- California Department of Pesticides Regulations
- California Department of Public Health
- California Bureau of Cannabis Control
- California Department of Consumer Affairs
- California Department of Transportation (CalTrans)

19. Have California Native American tribes traditionally and culturally affiliated with the Project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and Project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process, per Public Resources Code §21080.3.2. Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3 (c) contains provisions specific to confidentiality.

Lake County sent an AB52 notice to 11 Lake County-based Tribes on September 4, 2020, informing tribes of the proposed project and offering consultation under AB-52. None of the 11 notified Tribes responded to the notice. The project site appears to be located in the ancestral boundary of the Elem Colony Tribe who received notice of this project.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|---|--|---|
| <input checked="" type="checkbox"/> Aesthetics | <input type="checkbox"/> Greenhouse Gas Emissions | <input type="checkbox"/> Public Services |
| <input type="checkbox"/> Agriculture & Forestry Resources | <input type="checkbox"/> Hazards & Hazardous Materials | <input type="checkbox"/> Recreation |
| <input checked="" type="checkbox"/> Air Quality | <input type="checkbox"/> Hydrology / Water Quality | <input type="checkbox"/> Transportation |
| <input checked="" type="checkbox"/> Biological Resources | <input type="checkbox"/> Land Use / Planning | <input checked="" type="checkbox"/> Tribal Cultural Resources |
| <input checked="" type="checkbox"/> Cultural Resources | <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Utilities / Service Systems |
| <input type="checkbox"/> Energy | <input checked="" type="checkbox"/> Noise | <input checked="" type="checkbox"/> Wildfire |
| <input type="checkbox"/> Geology / Soils | <input type="checkbox"/> Population / Housing | <input type="checkbox"/> Mandatory Findings of Significance |

DETERMINATION: (To be completed by the lead Agency)

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☒ I find that although the proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been

made by or agreed to by the Project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

- ☐ I find that the proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed Project, nothing further is required.

Initial Study Prepared By: Eric J. Porter, Associate Planner

Signature: Eric J. Porter

Date: 5-4-2023

Mireya G. Turner, Director
Lake County Community Development Department

SECTION 1

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to Projects like the one involved (e.g., the Project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on Project-specific factors as well as general standards (e.g., the Project will not expose sensitive receptors to pollutants, based on a Project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as Project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, and then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

- 4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c) (3) (D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the Project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a Project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significance

I. AESTHETICS

Except as provided in Public Resource Code Section 21099, would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 6, 9
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	2, 3, 4, 9

- | | | | | | |
|--|--------------------------|-------------------------------------|--------------------------|--------------------------|------------------------|
| c) Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area would the project conflict with applicable zoning and other regulations governing scenic quality? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1, 2, 3, 4,
5, 6, 9 |
| d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1, 2, 3, 4,
5, 6, 9 |

Discussion:

- a) The project site is located on a relatively flat portion of a property that is partially occluded from view from New Long Valley Road, which is a well-maintained dirt County road at this location. Tree coverage along the road partially obscures the view of the site from the road. The project will need to have screening fencing around the perimeter of the cultivation area because of its visibility and for security reasons. A mitigation measure requiring this is added as follows:

FIGURE 3 – VIEW OF SITE FROM NEW LONG VALLEY ROAD

AES-1: Prior to cultivation, the applicant shall install a minimum 6' tall screening fence around the cultivation area. Fabric screening shall not be used due to poor durability; the screening material shall be chain link with slats, or a solid wood or metal fence. This shall occur prior to any cultivation occurring on site.

AES-2: Prior to Phase II cultivation, the applicant shall install blackout screening inside any translucent building to prevent light visibility from neighboring lots and public roads.

AES-3: All lighting shall be downcast and shall not be directly visible from public roads or neighboring lots. All lighting shall comply with fixture recommendations found in darksky.org.

Less than Significant Impact with Mitigation Measure AES-1 through AES-3 incorporated

- b) The proposed project will be somewhat visible from New Long Valley Road, which passes somewhat close to the cultivation area. The applicant has stated that no trees will be removed by this proposal. There are no rock outcroppings on site, and there are no historic buildings that might otherwise be impacted by this project. The terrain is varied; the cultivation area is relatively flat, however the southern portion of lot 23 and the northern portion of lot 53 are relatively steep and heavily treed. The requirement for a 6' tall screening fence will help to screen the cultivation site from view.

Less than Significant Impact

- c) The site is located within a rural area that has large lots and relatively sparse development. The four acre cultivation site will not adversely impact the scenic quality of this area if it is screened as is required by mitigation measure AES-1.

Less than Significant Impact with mitigation measures added

- d) The project has potential to create additional light or glare due to the proposed greenhouses and hoop house buildings proposed. Mitigation measures AES-1 through AES-3 will help to reduce potential light-related impacts to 'less than significant' levels.

Less than Significant Impact with mitigation measures added

II. AGRICULTURE AND FORESTRY RESOURCES	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 7, 8, 11, 13, 39
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 2, 3, 4, 5, 7, 8, 11, 13
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 2, 3, 4, 5, 7, 8, 11, 13

- | | | | | | |
|--|--------------------------|--------------------------|-------------------------------------|-------------------------------------|-----------------------------------|
| d) Result in the loss of forest land or conversion of forest land to non-forest use? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | 1, 2, 3, 4,
5, 6, 9 |
| e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 2, 3, 4,
5, 7, 8, 11,
13 |

Discussion:

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board.

- a) The cultivation site is mapped as 'farmland of local importance' where the greenhouse cultivation is proposed, and 'other land' on most of lot 23 to the south, which would contain the outdoor cannabis cultivation area. Greenhouse cultivation is permitted on 'farmland of local importance' with approval of a major use permit. The project does not appear to be problematic for the agriculturally-productive lot to the west due to prevailing wind direction (from northwest to southeast), and due to separation between the outdoor cultivation site and the neighboring agricultural use, which is about 350 feet west of the cultivation area.

Less Than Significant Impact

- b) The site is not under a Williamson Act contract, however the site to the immediate west is under a Williamson Act contract and is zoned APZ, Agricultural Preserve, and is agriculturally productive. The outdoor cultivation site is located downwind from the prevailing wind direction at this location, and is about 350 feet from the traditional crop-producing lot to the west.

Less Than Significant Impact

- c) The project site is zoned "RL" Rural Lands, and is not zoned for forestland or timberland, nor has it been used historically for timber production.

No Impact

- d) The project is limited to one acre of outdoor commercial cannabis cultivation and would not result in the loss or conversion of forest land to a non-forest use since no timber production is occurring on the land.

No Impact

- e) As proposed, this project would not induce changes to existing farmland that would result in its conversion to non-agricultural use.

Less Than Significant Impact

III. AIR QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 21, 24, 31, 36
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under and applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 21, 24, 31, 36
c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 10, 21, 24, 31, 36
d) Result in other emissions (such as those leading to odors or dust) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 21, 24, 31, 36

Discussion:

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations.

- a) The Project site is located within the Lake County Air Basin, which is under the jurisdiction of the Lake County Air Quality Management District (LCAQMD). The LCAQMD applies air pollution regulations to all major stationary pollution sources and monitors air quality. The Lake County Air Basin is in attainment with both state and federal air quality standards.

Because the Lake County Air Basin is in attainment of both state and federal air quality standards, LCAQMD has not adopted an Air Quality Management Plan, but rather uses Bay Area Air Quality Management District's 'significance thresholds' address air quality standards that are associated with a project.

According to the USDA Soil Survey and the ultramafic, ultrabasic, serpentine rock and soils map of Lake County, serpentine soils have not been found on the Project Property, and would pose no threat of asbestos exposure during either the construction phase or the operational phase. Air impacts from vehicle use is addressed in section c) below.

Less than Significant Impact

- b) The Project area is in the Lake County Air Basin, which is designated as in attainment for state and federal air quality standards for criteria pollutants (CO, SO₂, NO_x, O₃, PM₁₀, PM_{2.5}, VOC, ROG, Pb). Any Project with daily emissions that exceed any of the thresholds of significance for these criteria pollutants should be considered as having an individually and cumulatively significant impact on both a direct and cumulative basis.

As indicated by the Project's Air Quality Management Plan, near-term construction activities and long-term operational activities would not exceed any of the thresholds of significance for criteria pollutants. Lake County has adopted Bay Area Air Quality Management District (BAAQMD) thresholds of significance as a basis for determining the significance of air quality and greenhouse gas impacts. Using the California Emissions Estimator Model, air emissions modeling performed for this Project, in both the construction phase and the operational phase, will not generate significant quantities of ozone or particulate matter and does not exceed the Project-level thresholds. Construction and operational emissions are summarized in the following tables:

Comparison of Daily Construction Emissions Impacts with Thresholds of Significance

Criteria Pollutants	Project Emissions unmitigated (pounds/day)	BAAQMD Threshold (pounds/day)	Significance
ROG (VOC)	1 to 10	54	Less than significant
NO _x	10 to 20	54	Less than significant
CO	10 to 30	548	Less than significant
SO _x	< 1	219	Less than significant
Exhaust PM ₁₀	1 to 10	82	Less than significant
Exhaust PM _{2.5}	1 to 10	54	Less than significant
Greenhouse Gasses (CO ₂ e)	2,000 to 3,500	No threshold established	Less than significant

Comparison of Daily Operational Emissions Impacts with Thresholds of Significance

Criteria Pollutants	Project Emissions unmitigated (pounds/day)	BAAQMD Threshold (pounds/day)	Significance
ROG (VOC)	1 to 10	54	Less than significant
NO _x	1 to 5	54	Less than significant
CO	1 to 10	548	Less than significant

PM _{2.5}	0 to 1	10	Less than significant
Greenhouse gasses (as CO ₂ or methane)	1 to 100	10,000	Less than significant

According to the Lake County Zoning Ordinance section on commercial cannabis cultivation (§27.11), Air Quality must be addressed in the Property Management Plan. The intent of addressing this is to ensure that “all cannabis permittees shall not degrade the County’s air quality as determined by the Lake County Air Quality Management District” and that “permittees shall identify any equipment or activity that may cause, or potentially cause the issuance of air contaminants including odor and shall identify measures to be taken to reduce, control or eliminate the issuance of air contaminants, including odors”. This includes obtaining an Authority to Construct permit pursuant to LCAQMD Rules and Regulations.

Less than Significant Impact

- c) Sensitive receptors (i.e., children, senior citizens, and acutely or chronically ill people) are more susceptible to the effects of air pollution than the general population. Land uses that are considered sensitive receptors typically include residences, schools, playgrounds, childcare centers, hospitals, convalescent homes, and retirement homes.

There are no schools, parks, childcare centers, convalescent homes, or retirement homes located in proximity to the Project site. The nearest off-site residences are over 1,000 feet from the cultivation site, well over the 200-foot setback for offsite residences from commercial cannabis cultivation as described in Article 27.11 of the Lake County Zoning.

The proposed Project has some potential to result in short- and long-term air quality impacts from construction and operation of the proposed Project.

Construction impacts, which include the construction of a 6,000 sq. ft. metal building during the first stage of site development, and the construction of twelve 3,000 sq. ft. greenhouses and twenty-two 1,000 sq. ft. hoop houses during the second stage of site development; the preparing of soils for planting and the installation of security / screening fencing, would be temporary in nature and would occur over about a two to three month period for each stage of site development.

Operational impacts would include dust and fumes from site preparation of the cultivation area and vehicular traffic, including small delivery vehicles that would be contributors during and after site preparation and construction. The EPA has indicated that a vehicle produces 404 grams of CO₂ on average for each vehicle mile traveled. The proposed project will operate from 7 a.m. to 7 p.m., Monday through Sunday. Estimated to have up to four employees during normal operations, and up to ~~eight~~ six employees during peak harvest season. Vehicle trips per day during operations are estimated up to ~~16~~ 12 daily employee trips, and 2 deliveries per week on average. A total of ~~114~~ 86 weekly trips are projected. Assuming a 270 day cultivation season, a total of about ~~4,332~~ 3,316 trips is anticipated.

The nearest populated area is Clearlake Oaks, which for purposes of estimating total vehicle impacts is considered to be the living area for employees. Clearlake Oaks is located about ~~4~~ 16 miles from the cultivation site. Assuming ~~4,332~~ 3,316 annual vehicle trips from four 16 miles away, a total of ~~17,328~~ 53,056 vehicle miles per year can be anticipated. Each car produces an average of 404 grams of CO₂ per vehicle mile traveled (source: EPA). Total anticipated CO₂ emissions is ~~7,000,512~~ 21,434,624 grams of CO₂ per year, or 21.4 tons.

Lake County has no thresholds for air emissions and uses Bay Area Air Quality Management District’s (BAAQMD) standards for thresholds of significance. The

BAAQMD's threshold is 1,100 tons of CO₂ per project. Based on this threshold amount, it would take this project decades to meet the BAAQMD threshold for 'significant impact' to air quality.

Pesticide application will be used during the growing season and only within the cultivation area. The cultivation area will be surrounded by a fence which will help to prevent off-site drift of pesticides. Additionally, no demolition or renovation will be performed which would cause asbestos exposure, and there are no mapped serpentine soils on the subject site.

Implementation of mitigation measures would reduce air quality impacts to less than significant. Dust during site preparation would be limited during periods of high winds (over 15 mph). All visibly dry, disturbed soil and road surfaces would be watered to minimize fugitive dust emissions.

Cannabis cultivation activities involve certain disturbance of soil; whether its related to grading to upgrade interior driveways to meet PRC 4290 and 4291 commercial driveway standards; preparing areas as parking lots, or importing soil for outdoor cultivation (usually fabric pots). Lake County routinely puts mitigation measures in place to prevent dust from the project to migrate, and to protect the site and area from air quality-related impacts.

Therefore the following mitigation measures are added:

AQ-1: Prior to obtaining the necessary permits and/or approvals for any phase, applicant shall contact the Lake County Air Quality Management District (LCAQMD) and obtain an Authority to Construct (A/C) permit for all operations and for any diesel-powered equipment and/or other equipment with potential for air emissions.

AQ-2: All mobile diesel equipment used must be in compliance with state registration requirements. Portable and stationary diesel-powered equipment must meet all federal, state, and local requirements, including the requirements of the State Air Toxic Control Measures for compression ignition engines. Additionally, all engines must notify LCAQMD prior to beginning construction activities and prior to any diesel engine use.

AQ-3: The applicant shall maintain records of all hazardous or toxic materials used, including a Material Safety Data Sheet (MSDS) for all volatile organic compounds utilized, including cleaning materials. Said information shall be made available upon request and/or the ability to provide the LCAQMD such information in order to complete an updated Air Toxic emission Inventory.

AQ-4: All vegetation removed during site development shall be chipped and spread for ground cover and/or erosion control. The burning of vegetation, construction debris, including waste material is prohibited.

AQ-5: The applicant shall have the primary access and parking areas surfaced with chip seal, asphalt, or an equivalent all weather surfacing to reduce fugitive dust generation. The use of white rock as a road base or surface material for travel routes and/or parking areas is prohibited.

AQ-6: All areas subject to infrequent use of driveways, overflow parking, etc., shall be surfaced with gravel, chip seal, asphalt, or an equivalent all weather surfacing. Applicant shall regularly use and/or maintain graveled area to reduce fugitive dust generations.

AQ-7: Prior to greenhouse and/or hoop house cultivation, and prior to use of the 6,000 sq. ft. metal building for cannabis drying and packaging, the applicant shall install carbon or similar air filters in each structure.

Less than Significant Impact with mitigation measures added

- d) The Project Property is located in a rural area of the County of Lake, where the majority of development is single family residential dwellings on relatively large lots with a few agricultural uses in the vicinity. The potential impacts to air quality are dust and odor; the dust has been addressed in mitigation measures. The odor is seasonal around harvest time, and given the sparse population, the terrain and lot sizes in this area, the impact associated with cannabis odor should be minimal.

Less than Significant Impact

IV. BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	2, 5, 11, 12, 13, 16, 24, 29, 30, 31, 32, 33, 34, 45
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 11, 12, 13, 16, 17, 29, 30, 31, 32, 33, 34, 45
c) Have a substantial adverse effect on state or federally protected wetlands (including, not limited to, marsh, vernal pool, coastal wetlands, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 11, 12, 13, 16, 17, 21, 24, 29, 30, 31, 32, 33, 34, 45
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	13
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 11, 12, 13
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 2, 3, 5, 6

Discussion:

- a) A Biological Assessment (BA) of the Project Property was prepared by Northwest Biosurvey, and is dated August 16, 2019. Site visits for in-season floristic surveys, mapping, and aquatic resources delineation were made on May 22 and August 12, 2019. The Assessment concluded that the proposed project should not have any adverse impacts on sensitive environments based on the data collected during the site visits, and based on documentation on area flora and fauna that was used.

The following mitigation measures are added to protect potentially sensitive wildlife:

- BIO-1: In order to avoid impacts passerines and raptors protected under the Migratory Bird Treaty Act and California Fish and Wildlife Code, the following recommendation is made: Removal of trees during the nesting season (February 1 to August 31) must be preceded by a survey for nesting birds conducted by a qualified biologist. In the event that nesting birds are identified, a suitable construction buffer will be established around the nest site until either the end of the nesting season or upon determination by a qualified biologist that fledging has been completed, or that the nest has been abandoned. It is recommended that trees approved for removal be felled outside of the nesting season.
- BIO-2: In order to avoid incidental take of bats, the following recommendation is made: If work is proposed within woodland habitat during the maternity roosting season for bats (April 1 through September 15), trees with features capable of supporting roosting bats shall be surveyed for bat roosts or evidence of bat roosting (guano, urine staining and scent, dead bats) within 14 days of the start of project activities or removal of vegetation. If active roosts are discovered, a buffer of 50 feet around the active roost should be established by a qualified biologist. Removal may occur once active roosting ceases as determined by the biologist.
- BIO-3: In order to avoid impacts to sensitive herptiles, any project-related work within the riparian zones of Sulphur Canyon or Long Valley creeks should be preceded by a survey for foothill yellow-legged frog and western pond turtle. If these species are present, any work done within the bed or banks of these channels when flows or pooled water is present should be monitored by a qualified biologist with a California Department of Fish and Wildlife collecting permit covering the potentially affected herptiles. The biologist will assure that these herptiles are temporarily cleared from the work area.
- BIO-4: All work should incorporate extensive erosion control measures consistent with Lake County Grading Regulations. Coverage under the National Pollutant Discharge Elimination System (NPDES), General Permit for Storm Water Discharges associated with a Construction Activity (General Permit) and a Storm Water Pollution Prevention Plan (SWPPP) may be required.

Less Than Significant Impact with mitigation measures added

- b) No removal of riparian vegetation is proposed as part of this project. The applicant will be required to remove some shrubs and grasses in order to meet CALFIRE's Public Resource

Code requirements for commercial driveways (primarily widening the existing driveway), however the applicant is not proposing any removal of vegetation; the proposed buildings are to be placed on flat portions of the site that are already cleared of vegetation.

Less Than Significant Impact

- c) There are no federally-protected wetlands located in or within 100 feet of the cultivation sites; therefore the project will not impact any wetlands.

Less Than Significant Impact

- d) A Biological Assessment (BA) of the Project Property was prepared by Northwest Biosurvey, and is dated August 16, 2019. Site visits for in-season floristic surveys, mapping, and aquatic resources delineation were made on May 22 and August 12, 2019. The surveying Biologist did not see any listed species according to the study, but put mitigation measures in place in the event of inadvertent discovery, which were added as mitigation measures BIO-1 through BIO-4. The Study Area was also assessed for the presence of potentially-jurisdictional water features, including riparian areas, isolated wetlands and vernal pools, and other biologically-sensitive aquatic habitats.

The Study concluded that “no critical habitat for any Federally-protected species occurs in the Project Area or surrounding Study Area during the field survey other than ephemeral watercourses.

Less than Significant Impact

- e) The proposed project would be consistent with all Lake County ordinances related to the protection of biological resources, because there are no protected biological resources present on the project site. The proposed project would not affect any wetlands, ephemeral drainages, or other sensitive habitats protected by the Lake County Zoning Ordinance. According to the material submitted, no tree removal will be required, so no County tree removal policies or ordinances would apply.

Less than Significant Impact

- f) No adopted Habitat Conservation Plans, Natural Community Conservation Plans, or other local, regional, or state habitat conservation plans have been adopted for the Project area and no impacts are anticipated.

No Impact

V. CULTURAL RESOURCES

Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
--------------------------------------	--	------------------------------------	--------------	------------------

Would the project:

- | | | | | | |
|--|--------------------------|-------------------------------------|--------------------------|--------------------------|-------------------------------|
| a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5,
11, 14c,
15 |
| b) Cause a substantial adverse change in the significance of an archeological resource pursuant to §15064.5? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5,
11, 14, 15 |
| c) Disturb any human remains, including those interred outside of formal cemeteries? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5,
11, 14, 15 |

Discussion:

- a) A Cultural Resource Evaluation was prepared for this project by Wolf Creek Archaeology Services, and is dated May 17, 2019.

The summary indicated that there no cultural resources were discovered within the project boundaries that were surveyed, however a small antique brass bell was discovered hanging on a tree near a location where a small barn or out building had been located, which had burned in the 2018 Mendocino Complex Fire. The bell was not considered as being a significant historic resource by the surveying archaeologist.

The Evaluation also stated that although it is possible that some significant relics or artifacts may exist on the site that were not seen during the site survey, the project should proceed as planned. The Evaluation also stated that it was unlikely that human remains exist on the site, but stated that if inadvertent discovery were to occur, that the Tribe and a qualified Archaeologist be made aware of the discovery. The County also requires the Sheriff's Department to be notified in the event of such inadvertent discoveries; mitigation measures are added to address this occurrence if it were to happen.

The County sent all eleven tribes based on Lake County an AB 52 notice on September 4, 2020, informing tribes of the proposed project and offering consultation under AB-52. None of the 11 notified Tribes responded to the notice. The project site appears to be located in the ancestral boundary of the Elem Colony Tribe who received notice of this project.

The following mitigation measures are therefore added as a precautionary measure:

- CUL-1: Should any archaeological, paleontological, or cultural materials be discovered during site development, all activity shall be halted in the vicinity of the find(s), the applicant shall notify the culturally affiliated Tribe, and a qualified archaeologist to evaluate the find(s) and recommend mitigation procedures, if necessary, subject to the approval of the Community Development Director. Should any human remains be encountered, the applicant shall notify the Sheriff's Department, the culturally affiliated Tribe, and a qualified archaeologist for proper internment and Tribal rituals per Public Resources Code Section 5097.98 and Health and Safety Code 7050.5.

- CUL-2: All employees shall be trained in recognizing potentially significant artifacts that may be discovered during ground disturbance. If any artifacts or remains are found, the culturally affiliated Tribe shall immediately be notified; a licensed archaeologist shall be notified, and the Lake County Community Development Director shall be notified of such finds.

Less than Significant Impacts with Mitigation Measures CUL-1 and CUL-2 incorporated.

- b) Site disturbance will take place as part of project and site preparation, so there is a potential for inadvertent discovery of as-of-yet undiscovered resources during project construction. Therefore, this impact is considered significant. Mitigation measures CUL-1 and CUL-2 will reduce potential effects of inadvertent discovery to 'less than significant levels'.

Less than Significant Impact with Mitigation Measures CUL-1 and CUL-2 incorporated.

- c) The Project site does not contain a cemetery and no known formal cemeteries are located within the immediate site vicinity. In the event that human remains are discovered on the Project site, the Project would be required to comply with the applicable provisions of Health and Safety Code §7050.5, Public Resources Code §5097 et. seq. and CEQA Guidelines §15064.5(e). California Health and Safety Code §7050.5 states that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin. Pursuant to California Public Resources Code §5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner.

If the Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted and the Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98. Mandatory compliance with these requirements would ensure that potential impacts associated with the accidental discovery of human remains would be less than significant.

Less than Significant Impact with Mitigation Measures CUL-1 and CUL-2 incorporated.

VI. ENERGY

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resource, during construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	5
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5

Discussion:

- a) The proposed Project consists of four acres of outdoor cultivation, a 6,000 sq. ft. processing building and security fencing with limited supplemental lighting for security purposes, during the first stage of site development. During the second and final stage of site development, the proposed Project includes twelve 3,000 sq. ft. greenhouses and twenty-two 1,000 sq. ft. hoop houses which will have an energy demand. The overall power usage of this operation would be about 400 to 600 additional amps of power.

The County notified PG&E about this project; the company sent the County a preliminary response, but did not indicate whether the grid could accommodate the increased power demand at this location. The biggest potential power demand will be during the second and final stage of site development, however light deprivation is limited in wattage per square foot, and in order for the project to retain Tier 1 status, a limit of 6 watts per square foot is permitted by the state, which may reduce the overall power demand to serve the project.

Given the lack of response from PG&E, staff believes that the grid can accommodate the project at this location with no required mitigation measures needed.

Less than Significant Impact

- b) According to the California Department of Cannabis Control's Title 4 Division 19 §15010 on compliance with the CEQA, all cannabis applications must describe their project's anticipated operational energy needs, identify the source of energy supplied for the project and the anticipated amount of energy per day, and explain whether the project will require an increase in energy demand and the need for additional energy resources. The proposed Project consists of outdoor cultivation with minimal security lighting. The cultivation site will require power for greenhouses, the processing building, hoop houses, security systems, water pumps, minor outdoor lighting and cannabis odor filtration equipment. Electricity will be provided by 'on-grid' power. The project would meet the standards of Title 4 Division 19 §16305 Renewable Energy Requirements.

Less Than Significant Impact

VII. GEOLOGY AND SOILS

	Potentially Significant Impact	Less Than Significant With Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Directly or indirectly cause potentially substantial adverse effects, including the risk of loss, injury, or death involving:					
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 18, 19
ii) Strong seismic ground shaking?					

iii) Seismic-related ground failure, including liquefaction?					
iv) Landslides?					
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 19, 21, 24, 25, 30
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-site or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 9, 18, 21
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	5, 7, 39
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	2, 4, 5, 7, 13, 39
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 4, 5, 14, 15

Discussion:

- a) The Project site is located in a seismically active area of California and is expected to experience moderate to severe ground shaking during the lifetime of the Project. That risk is not considered substantially different than that of other similar properties and projects in California.

Earthquake Faults (i)

According to the USGS Earthquake Faults map available on the Lake County GIS Portal, there are no mapped earthquake faults within two miles of the Project Property. Thus, no rupture of a known earthquake fault is anticipated and the proposed Project would not expose people or structures to an adverse effects related rupture of a known earthquake fault as no structures for human occupancy are being proposed.

Seismic Ground Shaking (ii) and Seismic-Related Ground Failure, including liquefaction (iii)

Lake County contains numerous known active faults. Future seismic events in the Northern California region can be expected to produce seismic ground shaking at the site. All proposed construction is required to be built under Current Seismic Safety Construction Standards.

Landslides (iv)

The Project site is flat where the cultivation activities will occur. According to the Landslide Hazard Identification Map prepared by the California Department of Conservation's Division of Mines and Geology, the area is considered generally stable. As such, the

Project site is considered unlikely to be susceptible to landslides and will not likely expose people or structures to substantial adverse effects involving landslides, including losses, injuries or death.

FIGURE 4 – SLOPE MAP OF SUBJECT SITE

Source: Lake County GIS Mapping

Less Than Significant Impact

- b) Some grading for building pad preparation and utility / waterline trenching is proposed to prepare the Project site for cultivation. The applicant is required to apply for a Grading Permit, which is typical for most cannabis projects.

The applicant has provided an Erosion and Sediment Control Plan prepared by Realm Engineering that addresses potential erosion through the application of gravel/rock to access roads, weed-free straw mulch to disturbed areas, and the installation of straw wattles around the proposed outdoor cultivation area. Additionally, the applicant shall comply with the State Water Resources Control Board's Cannabis General Order (Order No. WQ-2019-001-DWQ) and Chapters 29 and 30 of the Lake County Code, to protect water quality through the implementation of Best Management Practices (BMPs) / Best Practicable Treatment or Control (BPTC) measures, which include erosion and sediment control BMPs/BPTC measures.

Less Than Significant Impact

- c) The Project Property mostly contains some slopes that are greater than 30%, but the cultivation site is flat; the sloped areas are located to the south and to a lesser extent to the north of the cultivation site. According to the Landslide Hazard Identification Map, prepared by the California Department of Conservation, Division of Mines and Geology, the project parcel is not located within and/or adjacent to an existing known "landslide area".

The applicant is required to apply for a Grading Permit and to follow the Stormwater Mitigation Measures that they are proposing on the site plans submitted; this includes placing straw wattles around the cultivation area to channel drainage in a manner that it will not adversely affect the site or surrounding area. The drawings submitted by the applicant show stormwater mitigation measures, so the project is proposing sufficient mitigation measures to control stormwater on site.

Less Than Significant Impact

- d) Type 158 soil is the soil type mapped on this site. Type 158 soil is not overly expansive or prone to 'shrink-swell' that might otherwise put structures in danger. The processing building and the greenhouses will be engineered; the hoop houses are made from light materials that would not be likely to injure or kill persons working within the hoop houses if they were for some reason to collapse.

A zoning clearance is required for each shed regardless of its size.

Less Than Significant Impact

- e) The proposed project will be served by portable toilets and restroom facilities while the processing building is being built, which contains restrooms. A new septic system will need to be installed to service the new restrooms.

Less Than Significant Impact

- f) According to the Wolf Creek Archaeological Services survey, the project site does not contain any known unique geologic feature or paleontological resources that might otherwise require protection or avoidance.

Less than Significant Impact

VIII. GREENHOUSE GAS EMISSIONS	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 36
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 36

Discussion:

- a) The Project Property is located within the Lake County Air Basin, which is under the jurisdiction of the Lake County Air Quality Management District (LCAQMD). The LCAQMD applies air pollution regulations to all major stationary pollution sources and monitors countywide air quality. Climate change is caused by greenhouse gases (GHGs) emitted into the atmosphere around the world from a variety of sources, including the combustion

of fuel for energy and transportation, cement manufacturing, and refrigerant emissions. GHGs are those gases that have the ability to trap heat in the atmosphere, a process that is analogous to the way a greenhouse traps heat. GHGs may be emitted as a result of human activities, as well as through natural processes. Increasing GHG concentrations in the atmosphere are leading to global climate change. The Lake County Air Basin is in attainment for all air pollutants and has therefore not adopted thresholds of significance for GHG emissions.

The proposed Project consists of outdoor cultivation for the first stage of site development with no supplemental lighting, and reduced outdoor cultivation with 44,000 sq. ft. of greenhouse cultivation for the second and final stage of site development. In general, greenhouse gas emissions associated with cannabis cultivation come from construction activities and vehicle trips during construction and operation. The outdoor cultivation areas will not have specific greenhouse gas-producing elements, and the cannabis plants will capture some carbon dioxide. Construction activities are expected to occur over a two to three month period per stage of site development, generating between 8 and 16 vehicle trips per day. The operation is expected to generate the same amount of vehicle trips per day during the cultivation season (May through October).

Lake County uses the Bay Area Air Quality Management District (BAAQMD) thresholds of significance as a basis for determining the significance of air quality and GHG impacts. The BAAQMD threshold of significance for a project is 1,100 metric tons of CO₂ emissions per project. As stated in the Air Quality section of this document, the projected amount of CO₂ emissions is about 21,434,624 grams, or 21.4 ~~7.1~~ tons per year. Assuming the 'per project' threshold of 1,100 tons per project, it would take decades for this project to reach the threshold of significance for CO₂ emissions.

Construction emissions and operational emissions were calculated using the California Emissions Estimator Model (CalEEMod®), Version 2016.3.2. Construction and operational CO₂ emissions are summarized above and in the tables of the Air Quality Section of this Initial Study. The results are expressed as a range of potential emissions. To magnify any air quality impacts, the model was run using the worst-case scenarios, and emissions estimates are reported here using the unmitigated emissions values. Air emissions modeling performed for this project demonstrates that the project, in both the construction phase and the operational phase, would not generate significant quantities of greenhouse gases and does not exceed the project-level thresholds established by BAAQMD.

Less than Significant Impact

- b) For purposes of this analysis, the Project was evaluated against the following applicable plans, policies, and regulations:
- The Lake County General Plan
 - The Lake County Air Quality Management District
 - AB 32 Climate Change Scoping Plan
 - AB 1346 Air Pollution: Small Off-Road Equipment

Policy HS-3.6 of the Lake County General Plan on Regional Agency Review of Development Proposals states that the "County shall solicit and consider comments from local and regional agencies on proposed projects that may affect regional air quality. The County shall continue to submit development proposals to the Lake County Air Quality

Management District for review and comment, in compliance with the California Environmental Quality Act (CEQA) prior to consideration by the County.” The proposed Project was sent out for review from the LCAQMD and the only concern was restricting the use of an onsite generator to emergency situations only.

The Lake County Air Basin is in attainment for all air pollutants with a high air quality level, and therefore the LCAQMD has not adopted an Air Quality Management Plan, but rather uses its rules and regulations for the purpose of reducing the emissions of greenhouse gases. The proposed Project does not conflict with any existing LCAQMD or BAAQMD rules or regulations and would therefore have a less than significant impact.

The 2017 AB Climate Change Scoping Plan recognizes that local government efforts to reduce emissions within their jurisdiction are critical to achieving the State’s long term GHG goals, which includes a primary target of no more than six (6) metric tons CO₂e per capita by 2030 and no more than two (2) metric tons CO₂e per capita by 2050. The Project will have up to three (3) individuals working on site (owners/operators) during normal operational hours, and with an expected 6.875 metric tons of overall operational CO₂e per year, the per capita figure of 2.29 metric tons of operational CO₂e per year meets the 2017 Climate Change Scoping Plan’s 2030 target, and nearly meets the 2050 target.

On October 9, 2021, AB 1346 Air Pollution: Small Off-Road Equipment (SORE) was passed, which will require the state board, by July 1, 2022, consistent with federal law, to adopt cost-effective and technologically feasible regulations to prohibit engine exhaust and evaporative emissions from new small off-road engines, as defined by the state board. The bill would require the state board to identify and, to the extent feasible, make available funding for commercial rebates or similar incentive funding as part of any updates to existing applicable funding program guidelines to local air pollution control districts and air quality management districts to implement to support the transition to zero-emission small off-road equipment operations, and the applicant should be aware of and expected to make a transition away from SOREs by the required future date.

Less than Significant Impact

IX. HAZARDS AND HAZARDOUS MATERIALS	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 5, 13, 21, 24, 29, 31, 32, 33, 34
b) Create a significant hazard to the public or the environment through reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 5, 13, 21, 24, 29, 31, 32, 33, 34
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 2, 5

- | | | | | | |
|---|--------------------------|--------------------------|-------------------------------------|-------------------------------------|----------------------------|
| d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | 2, 40 |
| e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | 1, 3, 4, 5, 20, 22 |
| f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5, 20, 22, 35, 37 |
| g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5, 20, 35, 37 |

Discussion:

a) Chemicals Storage and Effluent

According to the applicant, chemicals stored and used at/by the proposed cultivation operation include fertilizers/nutrients, pesticides, and some petroleum products (Agricultural Chemicals). All fertilizers/nutrients and pesticides, when not in use, will be stored in their manufacturer's original containers/packaging, undercover, and at least 100 feet from surface water bodies, inside the secure Pesticides & Agricultural Chemicals Storage Area (proposed metal shipping/storage container). Petroleum products will be stored under cover, in State of California-approved containers with secondary containment, and separate from pesticides and fertilizers within the proposed Pesticides & Agricultural Chemicals Storage Area. Spill containment and cleanup equipment will be maintained within the proposed Pesticides and Agricultural Chemicals Storage Area, as well as Materials Safety Data Sheets (MSDS/SDS) for all potentially hazardous materials used onsite. No effluent is expected to be produced by the proposed cultivation operation.

Solid Waste Management

According to the applicant, the types of solid waste that will be generated from the proposed cultivation operation include gardening materials and wastes (such as plastic mulch and plastic/fertilizer/pesticide bags and bottles) and general litter from staff/personnel. All solid waste will be stored in bins with secure fitting lids, located directly adjacent to the proposed cultivation areas. At no time will the bins be filled to a point that their lids cannot fit securely. Solid waste from the bins will be deposited into a dump trailer and hauled to a Lake County Integrated Waste Management facility, at least every seven (7) days/weekly. The Eastlake Landfill is the closest Lake County Integrated Waste Management facility to the project site.

Site Maintenance

According to the applicant, all equipment will be stored in its proper designated area upon completion of the task for which the equipment was needed. Any refuse created during the work day will be placed in the proper waste disposal receptacle at the end of each shift, or at a minimum upon completion of the task assigned. Any refuse which poses a risk for contamination or personal injury will be disposed of immediately.

100 feet of defensible space will be established and maintained around the proposed processing building and the fenced cultivation area for fire protection and to ensure safe and sanitary working conditions. Areas of defensible space will be mowed and trimmed regularly around the cultivation operation to provide for visibility and security monitoring. Access roads and parking areas will be graveled to prevent the generation of fugitive dust, and vegetative ground cover will be preserved throughout the entire site to filter and infiltrate storm water runoff from access roads, parking areas, and the proposed cultivation operation. Temporary portable restroom facilities will be made available for use whenever staff are onsite until the processing building with restrooms is built. The portable restrooms will be regularly serviced to ensure a safe and sanitary working environment.

The Project shall comply with Section 41.7 of the Lake County Zoning Ordinance that specifies that all uses involving the use or storage of combustible, explosive, caustic, or otherwise hazardous materials shall comply with all applicable local, state, and federal safety standards and shall be provided with adequate safety devices against the hazard of fire and explosion, and adequate firefighting and fire suppression equipment.

The Lake County Division of Environmental Health, which acts as the Certified Unified Program Agency (CUPA) for Hazardous Materials Management, has been consulted about the project and the project is required to address Hazardous Material Management in the Property Management Plan, which has been reviewed by the Lead Agency to ensure the contents are current and adequate. In addition, the Project will require measures for employee training to determine if they meet the requirements outlined in the Plan and measures for the review of hazardous waste disposal records to ensure proper disposal methods and the amount of wastes generated by the facility.

Less Than Significant Impact

- b) The Project involves the use of fertilizers and pesticides which will be stored in a secure stormproof structure.

Flood risk on the Project site is minimal; the entire property is located in the "X" flood zone, which has a very low risk of flooding. According to Lake County GIS Portal data and the Project is not located in or near an identified earthquake fault zone.

The Project site is mapped as being within a very high fire hazard severity zone. Wildfire mitigation measures are added and found within the Wildfire section of this document.

The Project Property does not contain any identified areas of serpentine soils or ultramafic rock, and risk of asbestos exposure during site disturbance is minimal.

Less than Significant Impact

- c) There are no schools located within one-quarter mile of the proposed Project site. The nearest school is East Lake School, which is located over four (4) miles south of the Project Property.

No Impact

- d) The California Environmental Protection Agency (CALEPA) has the responsibility for compiling information about sites that may contain hazardous materials, such as hazardous waste facilities, solid waste facilities where hazardous materials have been reported, leaking underground storage tanks and other sites where hazardous materials have been detected. Hazardous materials include all flammable, reactive, corrosive, or toxic substances that pose potential harm to the public or environment.

The following databases compiled pursuant to Government Code §65962.5 were checked for known hazardous materials contamination within ¼-mile of the project site:

- The SWRCB GeoTracker database
- The Department of Toxic Substances Control EnviroStor database
- The SWRCB list of solid waste disposal sites with waste constituents above hazardous waste levels outside the waste management unit.

The Project site is not listed in any of these databases as a site containing hazardous materials as described above.

No Impact

- e) The Project site is located about 10 miles from the nearest public airport or public use airport (Lampson Field). Lampson Field is administered by the Lake County Airport Land Use Commission, which has not adopted an Airport Land Use Compatibility Plan. There will be no hazard for people working in the Project area from a public airport or public use airport.

No Impact

- f) The Project would not impair or interfere with an adopted emergency response or evacuation plan. Hunter Point Road to Elk Mountain Road would be used to evacuate the site if an evacuation were needed. During evacuations, all persons at the Project site would be required to follow emergency response instructions for evacuations. Because the Project would not interfere with an adopted emergency response or evacuation plan, impacts are less than significant with the mitigation measures required in the Wildfire section of this document.

Less than Significant Impact

- g) The Project site is within a mapped very high fire hazard severity zone. The applicant shall adhere to all federal, state, and local fire requirements and regulations for setbacks and defensible space. Please refer to Section XX. Wildfire for additional information pertaining to risks associated with wildland fire.

Less than Significant Impact

X. HYDROLOGY AND WATER QUALITY

Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
--------------------------------------	--	------------------------------------	--------------	------------------

Would the project:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 29, 30
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 29, 30, 45
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:					
i) Result in substantial erosion or siltation on-site or off-site;					
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 7, 15, 18, 29, 32, 45
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or					
iv) Impede or redirect flood flows?					
d) In any flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 7, 9, 23, 32
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 29

Discussion:

- a) The Project Parcel is enrolled in the State Water Resources Control Board's Cannabis General Order (Order No. WQ 2019-001-DWQ) as a Tier 2, Low Risk site (WDID: 5S17CC428007). As required in the Cannabis Order's Policy for coming into compliance with Best Practicable Treatment or Control (BPTC) measures, the applicant had to prepare a Site Management Plan (SMP) and a Nitrogen Management Plan (NMP) within 90 days of enrollment. "The purpose of the Cannabis Policy is to ensure that the diversion of water and discharge of waste associated with cannabis cultivation does not have a negative impact on water quality, aquatic habitat, riparian habitat, wetlands, and springs" (State Water Board, 2019). BPTC measures have been implemented at the site for erosion control and stormwater pollution. The purpose of the NMP is to identify how nitrogen is stored, used, and applied to crops in a way that is protective to water quality. The applicant is required to complete online Annual Monitoring and Reporting to assess compliance with the Cannabis General Order and Notice of Applicability. This includes BPTC measures for winterization.

The applicant provided a Hydrology Report and an Erosion and Sediment Control Site Plan (Sheet 6) for the proposed Project. According to the applicant's Property Management Plan, the following erosion control measures will be followed:

- Established and re-established vegetation within and around the proposed cultivation operation will be maintained/protected as a permanent erosion and sediment control measure.

- Gravel will be applied to the surfaces of access roads, pathways, and the aisles between the garden beds/pots of the proposed cultivation areas, to allow for infiltration while mitigating the generation of sediment laden stormwater runoff.
- Straw rolls/wattles will be installed before November 15th of each year throughout the proposed cultivation operation per the Project's engineered Erosion and Sediment Control Site Plan, to filter pollutants and promote stormwater retention and infiltration.
- If areas of concentrated stormwater runoff begin to develop, additional erosion and sediment control measures will be implemented to protect those areas and their outfalls

The County's Cannabis Ordinance requires that all cultivation operations be located at least 100-feet away from all waterbodies (i.e. spring, top of bank of any creek or seasonal stream, edge of lake, wetland or vernal pool). Additionally, cultivators who enroll in the State Water Board's Waste Discharge Requirements for Cannabis Cultivation Order WQ 2019-001-DWQ must comply with the Minimum Riparian Setbacks. Cannabis cultivators must comply with these setbacks for all land disturbances, cannabis cultivation activities, and facilities (e.g., material or vehicle storage, diesel powered pump locations, water storage areas, and chemical toilet placement).

The proposed Project has been designed to meet the required riparian setbacks on the flattest portion of the property to reduce the potential for water pollution and erosion.

Less Than Significant Impact

- b) Due to exceptional drought conditions, the Lake County Board of Supervisors passed an Urgency Ordinance (Ordinance 3106) on July 27, 2021, requiring land use applicants to provide enhanced water analysis during a declared drought emergency. Ordinance 3106 requires that all project that require a CEQA analysis of water use include the following items in a Hydrology Report prepared by a licensed professional experienced in water resources:

- Approximate amount of water available for the project's identified water source,
- Approximate recharge rate for the project's identified water source, and
- Cumulative impact of water use to surrounding areas due to the project

Hydrology Reports

Two Hydrology Reports ("Report 1 and 2") were prepared for this project by Western Groundwater Surveyors, Inc. Report 1 is dated September 21, 2021; Report 2 is dated December 27, 2021. The Reports evaluate annual water demand for the project; aquifer capacity and recharge rate; competitive well demands, and well data for the on-site well.

Report #2 evaluated the aquifer in greater detail than Report #1. Report #2 identifies the geology in this area as being older alluvial fan deposits and alluvial terrace deposits. Water is found at a static groundwater depth of 29 feet. Report #2 identifies the aquifer boundary as being about 1.05 miles side, tapering down to about 0.17 miles at the convergence of the two nearest creeks. The total recharge area of the aquifer is about 569 acres in size.

Well Test

There is one existing permitted on-site well that was drilled to a depth of 54 feet. The well was tested by Jim's Pumps on September 22, 2021. The three-hour test yielded an average output of 100 gallons per minute (GPM) with virtually no drawdown, indicating a

strong water table at this location. According to Report #1, the well is located about 415 feet from the nearest surface water source, a Class 2 stream on the property. A second test was conducted by Alpha Analytical Laboratories Inc. on October 13, 2021. The second test was limited to evaluating water quality rather than quantity; the report determined that the water produced by the well did not contain any toxic elements that might otherwise harm people and plants.

According to the site plans submitted for this project, the applicant is proposing eight (8) 2,500 gallon water tanks for irrigation purposes with an additional 5,000-gallon metal water storage tank for fire suppression purposes.

Projected Water Use

Report #2 projects the annual water demand from the Knapp Farm as being about 7.92 acre-feet per year, or about 2,580,700 gallons per year. The Report states that competing wells demand about 203.1 acre-feet per year, or about 66,007,000 gallons of water per year.

The project will likely use a drip irrigation system to disperse water to the plants, although this is not specified within the report. The plants will be in fabric pots or raised beds; the drip irrigation systems are typically used for this type of outdoor cultivation.

Aquifer Data

The Report states that the 569 acre aquifer recharge area, and the total estimated storage capacity of the aquifer is about 8,080 acre-feet of water with a total usable amount of water being 20% of the total water storage, or about 1,600 acre-feet of usable water. The total annual demand represents about 13% of the total usable amount of water in this aquifer.

The Report estimates that annual recharge of the aquifer is about 737 acre-feet per year, about 5 times the amount of total demand on this aquifer.

Conclusion Regarding Water

The Report states that the completed well is of sufficient yield to irrigate the proposed project without over-drafting the aquifer.

Less Than Significant Impact

- c) According to Lake County Ordinance Section 27.13 (at) 3, the Property Management Plan must have a section on Storm Water Management based on the requirements of the California Regional Water Quality Control Board Central Valley Region or the California Regional Water Quality Control Board North Coast Region, with the intent to protect the water quality of the surface water and the stormwater management systems managed by Lake County and to evaluate the impact on downstream property owners. All cultivation activities shall comply with the California State Water Board, the Central Valley Regional Water Quality Control Board, and the North Coast Region Water Quality Control Board orders, regulations, and procedures as appropriate.

The cultivation operation is enrolled in the State Water Resources Control Board's Order *WQ 2019-0001-DWQ General Waste Discharge Requirements for Discharges of Waste Associated with Cannabis Cultivation Activities* (General Order). Compliance with this Order will ensure that cultivation operations will not significantly impact water resources by using a combination of Best Management Practices, buffer zones, sediment and

erosion controls, inspections and reporting, and regulatory oversight. Additionally, an engineered erosion and sediment control site plan was submitted by the applicant as part of the Property Management Plan.

According to the materials provided by the applicant, the establishment of the proposed cultivation operation will not require grading or vegetation clearing, however the requirement for improving the interior driveway to meet PRC 4290 and 4291 standards will require the removal of some brush, grasses and the movement of some earth to widen the driveway. There would be an increase in impermeable surface area; there are proposed to be 22 1,000 sq. ft. hoop houses with impermeable coverings, twelve 3,000 sq. ft. greenhouses, and one 6,000 sq. ft. processing building – the total impermeable square footage of these buildings is 64,000 sq. ft. of impermeable roofing. The proposed parking lot will have a permeable gravel surface.

The applicant has submitted proposed erosion and sediment control plans that have stormwater control measures, thus enabling stormwater to remain in a confined area on site and which will prevent the water from re-entering any surface water courses that are on site.

Less than Significant Impact

- d) The Project site is not located in an area of potential inundation by seiche or tsunamis. The Project site is mapped as being in Flood Zone X – areas of low flooding risk. There is a mapped flood plain located north of the cultivation area that will not be impacted by the cannabis cultivation activities.

Less than Significant Impact

- e) The Project Property is located within the Sacramento River Basin. The Water Quality Control Plan for the California Regional Water Quality Control Board Central Valley Region (Basin Plan) is applicable to the Sacramento River Basin, as well as the San Joaquin River Basin. The State Water Resource Control Board's Cannabis General Order (2019-001-DWQ) adheres to water quality and management standards identified and outlined within the Basin Plan. Compliance with the Cannabis General Order will ensure that the project does not conflict with or obstruct implementation of a water quality control plan.

There are no groundwater management plans for the affected groundwater basin(s) at this time.

Less than Significant Impact

XI. LAND USE PLANNING

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 2, 3, 5, 6

- | | | | | | |
|--|--------------------------|--------------------------|-------------------------------------|--------------------------|----------------------------------|
| b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5,
20, 21, 22,
27 |
|--|--------------------------|--------------------------|-------------------------------------|--------------------------|----------------------------------|

Discussion:

- a) The Project Property is located in a rural area of Lake County, characterized by large parcels containing scattered residential uses. The proposed Project would place four acres of cannabis cultivation area on a ±99 acre lot; there are no roads other than the interior driveway that would be affected, and the project would not physically divide an established community.

No Impact

- b) The proposed Project is consistent with the Lake County General Plan and Lower Lake Area Plan, and would create future employment opportunities for several local residents.

The General Plan Land Use and Base Zoning District designation currently assigned to the Project Parcel is "RL" Rural Lands. The Lake County Zoning Ordinance allows for commercial outdoor cannabis cultivation in the "RL" land use zone with a major use permit. The project is consistent with all other development standards within the zoning code for commercial cannabis cultivation.

Less than Significant Impact

XII. MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 3, 4, 5, 26
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 3, 4, 5, 26

Discussion:

- a) The Lake County Aggregate Resource Management Plan does not identify the portion of the Project parcel planned for cultivation as having an important source of aggregate resources. The California Department of Conservation describes the generalized rock type for the Project Property as the Lower Cretaceous-Upper Jurassic Great Valley Sequence and the Lower Cretaceous Great Valley Sequence, composed mostly of marine mudstones, siltstones, sandstones, and conglomerate. Additionally, according to the California Department of Conservation, Mineral Land Classification, there are no known mineral resources on the project site.

No Impact

- b) According to the California Geological Survey's Aggregate Availability Map, the Project site is not within the vicinity of a site being used for aggregate production. In addition, the site not delineated on the County of Lake's General Plan, the Lower Lake Area Plan nor the Lake County Aggregate Resource Management Plan as a mineral resource site. Therefore, the project has no potential to result in the loss of availability of a local mineral resource recovery site.

No Impact

XIII. NOISE

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 13
b) Result in the generation of excessive ground-borne vibration or ground-borne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 13
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 3, 4, 5, 11, 14, 15

Discussion:

- a) Noise related to outdoor cannabis cultivation typically occurs either during construction, or as the result of machinery related to post construction equipment such as well pumps or emergency backup generators during power outages.

This project will have some noise related to site preparation, primarily for the second stage of site development but also for construction of the processing building, trenching and post-hole digging for the fencing of the first stage of site development. The hours of construction are limited through standard conditions of approval.

Although the property size and location will help to reduce any noise detectable at the property line, mitigation measures will still be implemented to further limit the potential sources of noise.

In regards to the Lake County General Plan Chapter 8 - Noise, there are no sensitive noise receptors within one (1) mile of the project site, and Community Noise Equivalent Levels (CNEL) are not expected to exceed the 55 dBA during daytime hours (7 a.m. – 10 p.m.) or 45 dBA during night hours (10 p.m. – 7 a.m.) when measured at the property line.

The following mitigation measures will reduce the impacts associated with noise to 'less than significant' levels:

- NOI-1: All construction activities including engine warm-up shall be limited Monday Through Friday, between the hours of 7:00 a.m. and 7:00 p.m., and Saturdays from 12:00 noon to 5:00 p.m. to minimize noise impacts on nearby residents. Back-up beepers shall be adjusted to the lowest allowable levels. This mitigation does not apply to night work.
- NOI-2: Maximum non-construction related sounds levels shall not exceed levels of 55 dBA between the hours of 7:00 a.m. to 10:00 p.m. and 45 dBA between the hours of 10:00 p.m. to 7:00 a.m. within residential areas as specified within Zoning Ordinance Section 21-41.11 (Table 11.1) at the property lines.

Less than Significant Impact with Mitigation Measures NOI-1 and NOI-2 incorporated.

- b) Under existing conditions, there are no known sources of ground-borne vibration or noise that affect the Project site such as railroad lines or truck routes. Therefore, the Project would not create any exposure to substantial ground-borne vibration or noise.

The Project would not generate ground-borne vibration or noise, except potentially during the construction phase from the use of heavy construction equipment. The Project is not expected to employ any pile driving, rock blasting, or rock crushing equipment during construction activities, which are the primary sources of ground-borne noise and vibration during construction. As such, the Project is not expected to create unusual groundborne vibration due to site development or facility operation.

Less Than Significant Impact

- c) The Project site is located over 10 miles from the nearest airport. Therefore, the Project would not expose people residing or working in the Project area to excessive noise levels from air travel.

No Impact

XIV. POPULATION AND HOUSING

	Potentially Significant Impact	Less Than Significant With Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 3, 4, 5

- | | | | | | |
|---|--------------------------|--------------------------|--------------------------|-------------------------------------|------------|
| b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | 1, 3, 4, 5 |
|---|--------------------------|--------------------------|--------------------------|-------------------------------------|------------|

Discussion:

- a) The Project is not anticipated to induce significant population growth to the area. The increased employment will be between four and eight fulltime employees to be hired locally.

No Impact

- b) The Project will not displace any existing housing.

No Impact

XV. PUBLIC SERVICES

Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
--------------------------------------	--	------------------------------------	--------------	------------------

Would the project:

- a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--------------------------	--------------------------	-------------------------------------	--------------------------

1, 2, 3, 4,
5, 20, 21,
22, 23, 27,
28, 29, 32,
33, 34, 36,
37

- 1) Fire Protection?
- 2) Police Protection?
- 3) Schools?
- 4) Parks?
- 5) Other Public Facilities?

Discussion:

- a) The Project site is serviced by the Northshore Fire Protection District, the Lake County Sheriff's Department, and the Lake County Public Works Department, and it is located within the Konocti Unified School District.

The Project does not propose any new housing or other uses that would necessitate new or altered government facilities. No new roads are proposed. The Project would be required to comply with all applicable local and state fire code requirements related to design and emergency access. Construction and operation of the proposed project may result in accidents or crime emergency incidents that would require police services. Construction activities would be temporary and limited in scope. Accidents or crime emergency incidents during operation are expected to be infrequent and minor in nature.

There will not be a need to increase fire or police protection, schools, parks or other public facilities as a result of the project's implementation.

Less than Significant Impact

XVI. RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 2, 3, 4, 5
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 3, 4, 5

Discussion:

- a) As the small staff for the proposed Project will be hired locally, there will be no increase in the use of existing neighborhood and regional parks or other recreational facilities and no impacts are expected.

No Impact

- b) The proposed Project does not include any recreational facilities and will not require the construction or expansion of existing recreational facilities, and no impacts are expected.

No Impact

XVII. TRANSPORTATION

	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
Would the project:					
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 9, 20, 22, 27, 28, 35
b) For a land use project, would the project conflict with or be inconsistent with CEQA guidelines section 15064.3, subdivision (b)(1)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 9, 20, 22, 27, 28, 35
c) For a transportation project, would the project conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(2)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 3, 4, 5, 9, 20, 22, 27, 28, 35
d) Substantially increase hazards due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1, 3, 4, 5, 9, 20, 22, 27, 28, 35
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 3, 4, 5, 9, 20, 22, 27, 28, 35

Discussion:

- a) The Project Property is accessed via private interior driveway that connects with New Long Valley Road, a County-maintained dirt road at this location. A minimal increase in traffic is anticipated due to construction, employee use, and weekly and/or monthly incoming and outgoing deliveries through the use of small vehicles.

There are no pedestrian or bicycle facilities on New Long Valley Road in the vicinity of the project site.

The applicant will be required to obtain and maintain all the necessary Federal, State and local agency permits for any works that occurs with the right-of-way. The proposed Project does not conflict with any existing program plan, ordinance or policy addressing roadway circulation, including the Lake County General Plan Chapter 6 –Transportation and Circulation, and a less than significant impact on road maintenance is expected.

Less than Significant Impact

- b) State CEQA Guidelines Section 15064.3, Subdivision (b) states that for land use projects, transportation impacts are to be measured by evaluating the proposed Project's vehicle miles traveled (VMT), as follows:

"Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact."

The cultivation site is located about ~~4~~ 16 miles from Clearlake Oaks, the nearest population base and the likely residency of employees. A total of four employees are likely during regular operations and construction, and a total of ~~eight~~ six employees is anticipated during peak harvest times.

The proposed project will operate from 7 a.m. to 7 p.m., Monday through Sunday. Estimated to have up to four employees during normal operations, and up to ~~eight~~ six employees during peak harvest season. Vehicle trips per day during operations are estimated up to ~~16~~ 12 daily employee trips, and 2 deliveries per week on average. A total of ~~114~~ 86 weekly trips are projected. Assuming a 270 day cultivation season, a total of about ~~4,332~~ 3,316 annual trips total are anticipated.

The nearest populated area is Clearlake Oaks, which for purposes of estimating total vehicle impacts is considered to be the living area for employees. Clearlake Oaks is located about 4 miles from the cultivation site. Assuming ~~4,332~~ 3,316 annual vehicle trips from ~~four~~ 16 miles away, a total of ~~17,328~~ 53,056 vehicle miles per year can be anticipated. To date, the County has not yet formally adopted its transportation significance thresholds or its transportation impact analysis procedures. As a result, the project-related VMT impacts were assessed based on guidelines described by the California Office of Planning and Research (OPR) in the publication *Transportation Impacts (SB 743 CEQA Guidelines Update and Technical Advisory, 2018)*. The OPR Technical Advisory identifies several

criteria that may be used to identify certain types of projects that are unlikely to have a significant VMT impact and can be “screened” from further analysis. One of these screening criteria pertains to small projects, which OPR defines as those generating fewer than 110 new vehicle trips per day on average. OPR specifies that VMT should be based on a typical weekday and averaged over the course of the year to take into consideration seasonal fluctuations.

The proposed Project would not generate or attract more than 110 trips per day, and therefore it is not expected for the Project to have a significant level of VMT. Impacts related to CEQA Guidelines section 15064.3, subdivision (b) would be less than significant.

Less than Significant Impact

- c) The Project is not a transportation project. The proposed use will not conflict with and/or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)(2).

No Impact

- d) The Project does not propose any changes to road alignment or other features, does not result in the introduction of any obstacles, nor does it involve incompatible uses that could increase traffic hazards. Improvements to the interior driveway will be required to make the driveway PRC 4290 and 4291 compliant; no other road improvements appear to be necessary for this project. No Impact.
- e) The proposed Project would not alter the physical configuration of the existing roadway network serving the area and will have no effect on access to local streets or adjacent uses, including access for emergency vehicles. Internal gates are proposed to be 20’ wide, however CALFIRE requires emergency access routes that are gated to have gates that are 2 feet wider than the road, and the road is required to be 20’ wide to meet PRC 4290 and 4291 road standards for a commercial driveway. Staff completed a site visit in June, 2023, with CalFire, Public Works, and the Building Division. In August 2023, the applicant provided a stamped letter from his engineer providing a statement that the bridge has the capacity to meet the 75,000 pound rating required by PRC 4290 and 4291. A condition of approval is added to the project, requiring that a building permit for engineered bridge improvements be submitted within 90 days of approval of the use permit. The proposed Project would not inhibit the ability of local roadways to continue to accommodate emergency response and evacuation activities. The proposed Project would not interfere with the City’s adopted emergency response plan.

Less than Significant Impact

XVIII. TRIBAL CULTURAL RESOURCES

Would the project Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
--------------------------------	--	------------------------------	-----------	---------------

- | | | | | | |
|---|--------------------------|-------------------------------------|--------------------------|--------------------------|---------------------------|
| a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5,
11, 14, 15 |
| b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5,
11, 14, 15 |

Discussion:

- a) A Cultural Resource Evaluation (CRE) was prepared for this project by Wolf Creek Archaeology Services, and is dated May 17, 2019.

The summary indicated that there no cultural resources were discovered within the project boundaries that were surveyed, however a small antique brass bell was discovered hanging on a tree near a location where a small barn or out building had been located, which had burned in the 2018 Mendocino Complex Fire. The bell was not considered as being a significant historic resource by the surveying archaeologist.

The Evaluation also stated that although it is possible that some significant relics or artifacts may exist on the site that were not seen during the site survey, the project should proceed as planned. The Evaluation also stated that it was unlikely that human remains exist on the site, but stated that if inadvertent discovery were to occur, that the Tribe and a qualified Archaeologist be made aware of the discovery. The County also requires the Sheriff's Department to be notified in the event of such inadvertent discoveries; mitigation measures are added to address this occurrence if it were to happen.

The County sent all eleven tribes based on Lake County an AB 52 notice on September 4, 2020, informing tribes of the proposed project and offering consultation under AB-52. None of the 11 notified Tribes responded to the notice. The project site appears to be located in the ancestral boundary of the Elem Colony Tribe who received notice of this project.

Less than Significant Impact with Mitigation Measures CUL-1 and CUL-2 incorporated.

- b) No prehistoric sites were discovered during the field survey conducted for the CRE. The lead agency has determined that, in its discretion and supported by substantial evidence, no resources pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1 will be affected by the proposed Project, with implementation of mitigation measures CUL-1 through CUL-2.

Less than Significant Impact with Mitigation Measures CUL-1 and CUL-2 incorporated.

XIX. UTILITIES

Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
--------------------------------------	--	------------------------------------	--------------	------------------

Would the project:

- | | | | | | |
|--|--------------------------|--------------------------|-------------------------------------|--------------------------|------------------------------------|
| a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 3, 4, 5, 29, 32, 33, 34, 37, 45 |
| b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 2, 3, 5, 6, 22, 31, 45 |
| c) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 2, 3, 5, 6, 22 |
| d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 2, 3, 5, 6, 35, 36 |
| e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | 1, 2, 3, 5, 6, 35, 36 |

Discussion:

- a) The proposed Project will be served by an existing onsite irrigation well and on-grid power for all project-related energy and water demands. The Project will use onsite portable restroom and handwashing facilities until the processing building, which includes restrooms, is built.

The Project will not require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.

Less than Significant Impact

- b) Two Hydrology Reports ("Report 1 and 2") were prepared for this project by Western Groundwater Surveyors, Inc. All water for the proposed cultivation operation will come from an existing onsite groundwater well located on the cultivation site.

The total aquifer capacity is over 8080 acre-feet in this area, with about 20% or 1600 acre-feet of the aquifer considered to be usable water supply. The total demand on the aquifer, including the proposed project, is estimated to be 203 acre-feet per year according to the Hydrology Report #2 submitted. Annual recharge rate of the aquifer is projected to be 737 acre-feet per year on average.

Staff has concluded that the aquifer is sufficient to accommodate the project during a drought year based on the information received by the County.

Less than Significant Impact

- c) The Project will be served by temporary onsite portable restroom and handwashing facilities until the processing building is built. A restroom including a new septic system will be installed for the new processing building during first stage of construction/site development.

Less Than Significant Impact

- d) It is estimated that approximately 2000 pounds of waste from the proposed Project will be taken to the Eastlake Landfill each year. The Eastlake Landfill, South Lake Refuse Center, and Quackenbush Mountain Resource Recovery and Compost Facility are located within reasonable proximity of the Project site. As of 2019, the Eastlake Landfill had 659,200 cubic yards available for solid waste, with an additional 481,000 cubic yards approved in 2020.

There is adequate solid waste capacity to accommodate the proposed Project, and the project would not generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure.

Less than Significant Impact

- e) The Project will be in compliance with federal, state, and local management and reduction statutes and regulations related to solid waste.

Less than Significant Impact

XX. WILDFIRE	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:					
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 23, 25, 28, 29
b) Would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 23, 25, 28, 29
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1, 2, 3, 5, 6, 21, 23, 32

Discussion:

- a) The Project will not impair an adopted emergency response plan or evacuation plan. The applicant shall adhere to all regulation of California Code Regulations Title 14, Division 1.5, Chapter 7, Subchapter 2, and Article 1 through 5 shall apply to this project; and all regulations of California Building Code, Chapter 7A, Section 701A, 701A.3.2.A.

Less than Significant Impact

- b) The Project site is situated in a very high fire hazard severity zone. The site has significant slopes, however the cultivation area is located on a comparatively mildly sloping portion of the site, and according to the applicant, no grading is to occur. The cultivation site would not further exacerbate the risk of wildfire or the overall effect of pollutant concentrations on area residents in the event of a wildfire. The Project would improve fire access on site by being required to improve the interior driveway to meet PRC 4290 and 4291 standards, and by requiring the installation of water tanks that would be reserved for use by Fire Protection agencies if needed.

The following mitigation measures are required for this project due to the high severity risk associated with this site:

WDF-1: Construction activities will not take place during a red flag warning (per the local fire department and/or national weather service) and wind, temperature and relative humidity will be monitored in order to minimize the risk of wildfire. Grading will not occur on windy days that could increase the risk of wildfire spread should the equipment create a spark.

WDF-2: Prior to cultivation, the applicant shall provide 100' of defensible space around the processing building and the fenced cultivation area. This does not require tree removal, but it does require removal of grasses and brush, and limbing trees up to a height of 8'.

WDF-3: Prior to cultivation, the applicant shall schedule a site visit with the Building Official or designee to verify that the roads, gates and site are PRC 4290 and 4291 compliant.

WDF-4: The applicant shall place at least 5,000 gallons of water on site that is designated specifically as for use of fire suppression. Water tanks shall have connectors that are able to be used by Fire Protection Districts.

Less than Significant Impact with Mitigation Measures WDF-1 through WDF-4 incorporated.

- c) The proposed site improvements are generally limited to widening the interior driveway to meet PRC 4290 and 4291 standards for a commercial driveway, and for clearing brush for defensible space around structures.

Less than Significant Impact

- d) There is some chance of increased risks associated with post-fire slope runoff, instability, or drainage impacts based on the slopes of the southern lot near the cultivation site. Mitigation measures WDF-1 through WDF-4 are intended to reduce runoff-related impacts to 'less than significant' levels.

Less than Significant Impact with mitigation measure added.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE	Potentially Significant Impact	Less Than Significant with Mitigation Measures	Less Than Significant Impact	No Impact	Source Number
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	ALL
b) Does the project have impacts that are individually limited, but cumulatively considerable? (incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	ALL
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	ALL

Discussion:

- a) The project proposes the cultivation of commercial cannabis in a rural area of the County on an "RL" Rural Lands-zoned parcel.

According to the biological and cultural studies conducted, the proposed Project does not have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory when mitigation measures are implemented.

Mitigation measures are listed herein to reduce impacts related to Aesthetics, Air Quality, Cultural/Tribal Resources, Noise, and Wildfire.

Less than significant impact with mitigation measures added.

- b) Potentially significant impacts have been identified related to Aesthetics, Air Quality, Cultural and Tribal Resources, Noise, and Wildfire. These impacts in combination with the impacts of other past, present, and reasonably foreseeable future projects could cumulatively contribute to significant effects on the environment.

Implementation of and compliance with the mitigation measures identified in each section as Project Conditions of Approval would avoid or reduce potential impacts to less than significant levels and would not result in any cumulatively considerable environmental impacts.

Less than significant impact with mitigation measures added

- c) The proposed Project has the potential to result in adverse indirect or direct effects on human beings. In particular, Aesthetics, Air Quality, Cultural and Tribal Resources, Noise, and Wildfire have the potential to impact human beings. Implementation of and compliance with the mitigation measures identified in each section as conditions of approval would not result in substantial adverse indirect or direct effects on human beings and impacts would be considered less than significant.

Less than significant with mitigation measures added
