

- **Quality of Life and Health Concerns:** Residents in the Scenic Area of Lake County have a unique topography combined with the Geysers and the smell of Sulfur (Rotten EGG GAS) we are surrounded by hills. from the Napa County line to the Weatherwax Bridge, we have reported to the County that the odor is intense enough to cause physical sickness, including coughing, throat irritation, and headaches. Complaints suggest that the smell is more than just a nuisance, but rather a potential health threat, particularly for those living downwind of large-scale operations.

The smell is often accompanied by concerns about water usage and pollution, with illegal sites potentially contaminating local water sources, such as those that drain into St Helena Creek and Putah Creek water basin . A drop of water today in St Helena creek will in 8 days effects 500.000 people in Solano county and the US Military's Drinking Water. How long Do WE want to ignore these issues?

Let Just create a exclusion zone...and make Changes To Cannabis Ordinance

Very Respectfully Charles Morse
