Critical Habitat, Essential Fish Habitat, and Wildlife Corridors: Critical habitat is a term defined in the ESA as a specific and formally-designated geographic area that contains features essential for the conservation of a threatened or endangered species and that may require special management and protection. The ESA requires federal agencies to consult with the USFWS to conserve listed species on their lands and to ensure that any activities or projects they fund, authorize, or carry out will not jeopardize the survival of a threatened or endangered species. In consultation for those species with critical habitat, federal agencies must also ensure that their activities or projects do not adversely modify critical habitat to the point that it will no longer aid in the species' recovery. Note that designated critical habitat areas that are currently unoccupied by the species but which are deemed necessary for the species' recovery are also protected by the prohibition against adverse modification.

The Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) provides for conservation and management of fishery resources in the U.S. This Act establishes a national program intended to prevent overfishing, rebuild overfished stocks, ensure conservation, and facilitate long-term protection through the establishment of Essential Fish Habitat (EFH). EFH consists of aquatic areas that contain habitat essential to the long-term

survival and health of fisheries, which may include the water column, certain bottom types, vegetation (e.g. eelgrass (*Zostera* spp.)), or complex structures such as oyster beds. Any federal agency that authorizes, funds, or undertakes action that may adversely affect EFH is required to consult with NMFS.

3.0 ENVIRONMENTAL SETTING

The Study Area is set in a single parcel of approximately 13 acres, located in southeast Lake County, approximately 0.29 mile northwest of the downtown Middletown. It is situated in the Collayomi Valley along Dry Creek (USGS 2018). Detailed descriptions of the local setting are below.

3.1 Topography and Soils

The overall topography of the Study Area is flat. The elevation is approximately 1,100 feet above sea level. According to the *Soil Survey of Lake County* (USDA 1989), the Study Area is underlain by three soil mapping units: Kelsey Fine Sandy Loam, Talmage Very Gravelly Sandy Loam, and Xerofluvents, Very Gravelly. The parent soil series of these mapping units are summarized below.

Kelsey series: This series consists of very deep fine sandy loam that formed in alluvium from mixed rock sources situated on floodplains ranging from 900 to 1,600 feet. Soil pH is neutral (7.0) to slightly alkaline (7.4). These soils are listed as hydric in Lake County, but are well drained with very slow runoff and moderately rapid permeability and did not display any field indicators of hydric soils. Native vegetation includes annual grasses and forbs with scattered valley oaks (*Quercus lobata*) (USDA 1989, CSRL 2019).

Talmage Series: This series consist of very deep gravelly sandy loam formed in alluvium from mixed rock alluvial fans and plains at elevations ranging from 350 to 1,800 feet. Soil pH is slightly acidic (6.5) to neutral (7.0). These soils listed as hydric in Lake County, but are somewhat excessively drained with slow to medium runoff and moderately rapid permeability and did not display any field indicators of hydric soils. Native vegetation typically includes annual grasses and forbs with scattered oaks (*Quercus* spp.) (USDA 1989, CSRL 2019).

Xerofluvents Very Gravelly: This map unit consist of very deep, excessively drained soils formed from gravelly alluvium from mixed rock on narrow floodplains adjacent to stream channels. These soils are listed as hydric in Lake County, but have very slow runoff with rapid permeability and did not display any field indicators of hydric soils. Native vegetation typically includes vinegar weed (*Trichostema* spp.), foxtail fescue (*Festuca myuros*), and filaree (*Geranium* spp.) (USDA 1989).

3.2 Climate and Hydrology

The Study Area is located outside of the coastal fog belt of the San Francisco Bay Area, but annual rainfall is substantial in winter through early spring. The average monthly maximum temperature in Lakeport, approximately 25 miles to the northwest of Middletown, is 72.7 degrees Fahrenheit, while the average monthly minimum temperature is 41.4 degrees Fahrenheit. Precipitation predominantly falls as rainfall with an annual average of 44.1 inches in Middletown. Precipitation-bearing weather systems are predominantly from the west and south with the majority of rain falls between November and March, with a combined average of 36.95 inches (Western Regional Climate Center 2019).

The local watershed is Dry Creek-Putah Creek (HUC 12: 180201620303) and the regional watershed is Putah Creek (HUC 8: 18020162). One mapped blue-line stream, Dry Creek, is located within the Study Area (USGS 2018); this feature is also mapped as an intermittent stream in the National Wetlands Inventory (NWI 2019). No other wetland or stream features are mapped within the Study Area. The primary hydrologic sources are direct precipitation and consequent sheetflow, as well as channelized stream flow and occasional overbank flooding from Dry Creek.

3.3 Biota and Land Use

A majority of the Study Area was burned in the Valley Fire of September 2015; the fire intensity was at a level which charred trees and large shrubs, and cleared the herbaceous layer. However, the property was not developed and has not been developed in recent history (Historical Aerials 2019); evidence of discing for fire breaks was observed during the site visits. The Study Area is composed of grassland and oak woodland with riparian scrub associated with Dry Creek. Detailed plant community descriptions are included in Section 5.1 and all observed plant species are listed in Appendix B.

Currently the Study Area is undeveloped. Regional land-uses are primarily residential and commercial. Historically, the region was likely open rangeland consisting of numerous small ranches. There does not appear to be a history of intensive agriculture, quarrying, mining, or timbering (Historic Aerials 2019).

4.0 ASSESSMENT METHODS

Prior to the site visit, WRA biologists reviewed the following literature and performed database searches to assess the potential for sensitive natural communities (e.g., wetlands) and special-status species (e.g., endangered plants):

- *Soil Survey of Lake County, California* (USDA 1989)
- Middletown 7.5-minute quadrangle (USGS 2018)
- Aerial photographs (Google Earth 2019)
- Historical Aerial photographs (Historical Aerials 2019)
- National Wetlands Inventory (USFWS 2019a)
- California Natural Diversity Database (CNDDB, CDFW 2019a)
- California Native Plant Society Electronic Inventory (CNPS 2019a)
- Consortium of California Herbaria (CCH 2019)
- USFWS Information for Planning and Conservation Species Lists (USFWS 2018)
- CDFG publication *California Bird Species of Special Concern* (Shuford and Gardali 2008)
- CDFW publication *Fish Species of Special Concern in California* (Moyle et. al. 2015)
- USFWS publication *Birds of Conservation Concern* (2008)
- Western Bat Working Group Online Species Accounts (2018)
- CDFW and University of California Press publication *California Amphibian and Reptile Species of Special Concern* (Thomson et al. 2016)
- *A Manual of California Vegetation Online* (CNPS 2019b)
- *California Natural Community List* (CDFW 2018b)

Database searches (i.e., CNDDB, CNPS) focused on the Middletown, Clearlake Highlands, Lower Lake, Wilson Valley, Whispering Pines, Jericho Valley, Mount St. Helena, Detert Reservoir, and

Aetna Springs USGS 7.5-minute quadrangles for special-status plants. The special-status wildlife evaluation was based on database searches for the entirety of Lake County. Figures 3 and 4 in Appendix A contain observations of special-status species documented within a five-mile radius of the Study Area.

Following the remote assessment, a botanist with 40-hour Corps wetland delineation training and a wildlife biologist traversed the entire Study Area on foot to document: (1) biological communities (e.g., terrestrial communities, aquatic resources), (2) existing conditions and to determine if such provide suitable habitat for any special-status plant or wildlife species, (3) if and what type of aquatic resources (e.g., wetlands) are present, and (4) if special-status species are present.

4.1 Biological Communities

4.1.1 Terrestrial Natural Communities

The Study Area's terrestrial natural communities were evaluated to determine if such areas have the potential to support special-status plants or wildlife. In most instances, communities are delineated based on distinct shifts in plant assemblage (vegetation), and follow the *California Natural Community List* (CDFW 2018b), *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986), and *A Manual of California Vegetation, Online Edition* (CNPS 2019b). In some cases it may be necessary to identify variants of community types or to describe non-vegetated areas that are not described in the literature; should an undescribed variant be used, it will be noted in the description.

Vegetation alliances (natural communities) with a CDFW Rank of critically imperiled (S1/G1), imperiled (S2/G2), or vulnerable (S3/G3) as well as associations ranked with a "Y", were evaluated as sensitive as part of this evaluation.[2]

4.1.2 Aquatic Natural Resources

Aquatic natural resources include Waters of the U.S., Waters of the State, and Streams Lakes, and Riparian Habitat as defined in the CWA, Porter-Cologne Act, and CFGC, respectively. Lake County mandates setbacks from these aquatic resources, and therefore requires mapping of the outward extent of such features.

A formal wetland delineation was conducted during the site assessment. Results of the delineation are included in a separate report. In areas expressing superficial indicators of wetlands such as hydrophytic vegetation (i.e., plant communities dominated by wetland species), evidence of inundation or flowing water, saturated soils and seepage, and topographic depressions/swales, WRA biologists performed sample points following the *Corps of Engineers Wetlands Delineation Manual* (Environmental Laboratory 1987) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (Corps 2008).

Streams potentially jurisdictional under the CWA and/or the CFGC were delineated using a mix of surveyed topography data, high resolution aerial photographs, and a sub-meter GPS unit. The ordinary high water mark was used to determine the extent of potential Section 404 jurisdiction, while the top-of-bank was used to determine the extent of CFGC Section 1602. Streams with associated woody vegetation were assessed to determine if these areas would be considered

[2] Ranking of CDFW List of Vegetation Alliances is based on NatureServe Rankings (NatureServe 2018)

riparian habitat by the CDFW following *A Field Guide to Lake and Streambed Alteration Agreements, Section 1600-1607, California Fish and Game Code* (CDFG 1994).

4.2 Special-Status Species

4.2.1 General Assessment

Potential occurrence of special-status species in the Study Area was evaluated by first determining which special-status species occur in the vicinity of the Study Area through a literature and database review. Database searches for known occurrences of special-status species focused on the 7.5-minute USGS quadrangles mentioned above for special-status plants and the entirety of Lake County for special-status wildlife.

An initial site visit was made on October 22, 2018 to evaluate the presence of suitable habitat for special-status species. Suitable habitat conditions are based on physical and biological conditions of the site, as well as the professional expertise of the investigating biologists. The potential for each special-status species to occur in the Study Area was then determined according to the following criteria:

- **No Potential.** Habitat on and adjacent to the site is clearly unsuitable for the species requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).
- **Unlikely**. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.
- **Moderate Potential**. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
- **High Potential**. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
- **Present**. Species is observed on the site or has been recorded (i.e. CNDDB, other reports) on the site in the recent past.

If a more thorough assessment was deemed necessary, a focused or protocol-level assessment or survey was conducted or recommended as a future study. Methods for the assessments are described below. If a special-status species was observed during the site visit, its presence was recorded and discussed below in Section 5.2.

4.2.2 Special-Status Plants

WRA biologists conducted initial habitat assessments and floristic survey within the Study Area on October 22, 2018. The initial site assessment is intended to identify the presence or absence of suitable habitat for each special-status species known to occur in the vicinity in order to determine its potential to occur in the Study Area. Based on the October site assessment and database search results, additional site visits were conducted on March 14, April 28, and May 20, 2019 to conduct focused surveys for special-status plants. If a special-status species was observed during the site visits, its presence was recorded and discussed. Plants were identified to the taxonomic level necessary to determine whether or not they were sensitive using *The Jepson Manual, 2nd Edition* (Baldwin et. al. 2012) and Jepson Flora Project (eFlora 2019). Plant names follow those of Jepson Flora Project (eFlora 2019), unless otherwise noted.

4.2.3 Special-Status Wildlife

WRA biologists conducted wildlife habitat assessments and general wildlife visual encounter surveys within the Study Area during the October 22 site visit. Targeted assessments (e.g., in-depth evaluation of ponds for aquatic organisms) and protocol-level surveys were deemed inapplicable at the time of the site visit, due to inappropriate timing between such a survey and any future development on the site.

4.3 Critical Habitat, Essential Fish Habitat, and Wildlife Corridors

Prior to the site visit the USFWS Critical Habitat Mapper (USFWS 2018b) and the NMFS Essential Fish Habitat Mapper (NMFS 2018) were queried to determine if critical habitat for any species or EFH, respectively, occurs within the Study Area.

To account for potential impacts to wildlife movement/migratory corridors, biologists reviewed maps from the California Essential Connectivity Project (CalTrans 2010), habitat connectivity data available through the CDFW Biogeographic Information and Observation System (BIOS) (CDFW 2019a). Additionally, aerial imagery (Google 2019) for the local area was referenced to assess if local core habitat areas were present within, or connected to the Study Area. This assessment was refined based on observations of on-site physical and/or biological conditions.

5.0 ASSESSMENT RESULTS

5.1 Biological Communities

WRA observed six terrestrial biological communities and one aquatic biological community within the Study Area: developed, non-native grassland, popcorn flower fields, native grassland, blue oak woodland, mixed riparian woodland and perennial stream. Biological communities within the Study Area are illustrated in Figure 2 (Appendix A). The non-sensitive biological communities in the Study Area include non-native grasslands and developed areas. Sensitive biological communities within the Study Area are the valley oak woodland, mixed riparian woodland, popcorn flower patches, perennial stream and native grassland. Table 3 summarizes the acreage and sensitivity of the biological communities present within the Study Area.

Table 3. Biological Communities Present within the Study Area

Vegetation Alliance (CNPS 2019b)	Acres within Study Area
Non-Sensitive	
Developed (no vegetation alliance)	0.37
Non-native Annual Grassland – Wild Oat-Brome Grassland (*Avena* spp.-*Bromus* spp. Semi-Natural Herbaceous Stands)	11.18
Sensitive	
Valley Oak Woodland (*Quercus lobata* Woodland Alliance)	0.29

Native Grassland – Squirreltail Patches (*Elymus multisetus* Provisional Herbaceous Alliance)	0.83
Riparian Scrub – Arroyo Willow Thicket (*Salix lasiolepis* Shrubland Alliance)	0.25
Intermittent Stream (no vegetation alliance)	0.41 (227 linear feet)

5.1.1 Terrestrial Biological Communities

Non-Sensitive

Developed (no vegetation alliance). Rank: None. Developed portions of the Study Area are limited to a gravel access road leading from the terminus of Santa Clara Road along the eastern side of the site to a utility station located on the property to the north. The Study Area contains 0.37-acre of developed.

Non-native Annual Grassland – Wild Oat-Brome Grassland (*Avena* spp.-*Bromus* spp. Semi-Natural Herbaceous Stands). CDFW Rank: None: The Study Area contains 11.18 acres of non-native grassland. These grasslands are dominated by non-native grasses including wild oat (*Avena barbata*), soft chess (*Bromus hordeaceus*), medusa head (*Elymus caput-medusae*), and rye (*Secale* sp.). Non-native forbs including vetch (*Vicia* spp.), rose clover (*Trifolium hirtum*), western filaree (*Erodium moschatum*), big heron bill (*Erodium botrys*), and yellow star thistle (*Centaurea solstitialis*) are characteristically present within the non-native grassland. This community is not considered sensitive by Lake County, CDFW, or any other regulatory entity.

Sensitive

Valley Oak Woodland (*Quercus lobata* Woodland Alliance). CDFW Rank: G3 S3: Valley oak woodlands typically occur in the outer and inner Coast Ranges, Transverse Ranges, Sierra Nevada foothills, and coast from southern Humboldt County south to San Diego County, situated on valley bottoms, lower slopes, and summit valleys underlain by alluvial or residual well-drained substrates with high organic content (CNPS 2019b). The Study Area contains 0.29 acre of valley oak woodland situated in the southwestern corner. The dominant tree is valley oak (*Quercus lobata*) with intermittent cover. The understory is similar in composition to the non-native grasslands. These woodlands are considered sensitive to CDFW as indicated by the S3 ranking. Additionally, oak woodland retention is required in the Lake County General Plan Open Space, Conservation, and Recreation Policy OSC-1.13. See Section 6.0 below for further discussion of recommendations.

Native Grassland – Squirreltail Patches (*Elymus multisetus* Provisional Herbaceous Alliance). CDFW Rank: G4 S4?: Squirreltail patches are typically located throughout the state under a wide range of ecological and topographical positions (CNPS 2019b). The Study Area contains 0.83 acre of native grassland dominated by squirreltail grass (*Elymus multisetus*). Within the Study Area, the native grassland patches contained 10 to 40 percent absolute cover of squirreltail grass mixed with California poppy (*Eschscholzia californica*), California plantago, tarweed (*Hemizonia congesta* ssp. *luzulifolia*.), q-tips, soft chess, and dense flower owl's clover (*Castilleja exserta*) as associated species. While the alliance is ranked "S4?" by CDFW, the association which best fits the squirreltail patch alliance *(Elymus multisetus-Eschscholzia californica-Plantago erecta*) is ranked "Y," therefore this native grassland type may be considered sensitive. See Section 6.0 below for further discussion of recommendations.

Riparian Scrub – Arroyo Willow Thicket (*Salix lasiolepis* Shrubland Alliance). CDFW Rank: G4 S4 and Section 1602 of CFGC: The Study Area contains 0.25 acres of riparian scrub, located along the banks of Dry Creek. The riparian scrub best fits the arroyo willow thicket (*Salix lasiolepis* Shrubland Alliance) (CNPS 2019b). Arroyo willow thickets typically occur on stream banks and slopes, slope seeps, and stringers along drainages throughout California (CNPS 2019b). The riparian scrub was burned during the Valley Fire and is growing in, forming woody thickets mixed with open herbaceous areas. The shrub canopy is dominated by arroyo willow, with sandbar willow (*Salix exigua*) and Oregon ash (*Fraxinus latifolia*) as co-dominants. The herbaceous areas are dominated by wetland species including tall cyperus (*Cyperus eragrostis*), iris-leaved rush (*Juncus xiphioides*), fiddleleaf dock (*Rumex pulcher*), annual beard grass (*Polypogon monspeliensis*), and western goldenrod (*Euthamia occidentalis*). This community is associated with Dry Creek and therefore considered to be riparian vegetation. Riparian vegetation is within CDFW jurisdiction under Section 1600 of the CFGC. Additionally, Lake County requires riparian setbacks as outlined in Policy OSC-1.4 of the County General Plan; see Section 6.0 below for further discussion of recommendations.

5.1.2 Aquatic Natural Resources

Sensitive

Intermittent Stream. Section 404/401 of CWA and Section 1602 of CFGC. A 227-linear foot (0.41 acre) portion of Dry Creek is located along the western boundary of the Study Area. Dry Creek is a tributary of Putah Creek, located approximately 0.39 mile northeast of the Study Area. Dry Creek is an intermittent stream with water going subsurface during the driest portions of the year. The stream was dry during the October site visit; however, water was flowing during the spring site visits. The stream bottom is unvegetated, consisting of mixed gravel and fine sediment. The slopes of the bank are somewhat gradual, with evidence of scour to the top of the ordinary high water mark (OHWM). The banks are vegetated with herbaceous species and arroyo willow (*Salix lasiolepis*), sandbar willow (*Salix exigua*) and Oregon ash (*Fraxinus latifolia*) in the shrub canopy. This stream is sensitive as it is within the jurisdiction of the Corps and RWQCB under Section 404/401 of the CWA and within CDFW jurisdiction under Section 1602 of the CFGC. Additionally, Lake County requires stream setbacks as outlined in Sec 30-9 of the County Code and Article 37; see Section 6.0 below for further discussion of recommendations.

5.2 Special-Status Species

A total of 116 plant species and 22 wildlife species were identified within the Study Area during the site visits. A list of all observed species can be found in Appendix B. Figures 3 and 4 in Appendix A includes figures depicting known occurrences of special-status plants and wildlife within a 5-mile radius of the Study Area. A table summarizing the potential for special-status species to occur within the Study Area is included in Appendix C.

5.2.1 Special-Status Plant Species

Based upon a review of the resource databases listed in Section 4.0, 110 special-status plant species have been documented in the vicinity of the Study Area. Figure 3 in Appendix A shows the subset of those species documented within 5 miles of the Study Area. Eight of these species were originally considered to have the potential to occur in the Study Area based on habitat conditions observed during the October 2018 site visit. The remaining species documented from

the greater vicinity of the Study Area were determined to be unlikely or have no potential to occur for one or more of the following:

- Hydrologic conditions (e.g., tidal, seeps; vernal pools) necessary to support the special-status plant species are not present in the Study Area;
- Edaphic (soil) conditions (e.g., volcanics, serpentine, rocky barrens) necessary to support the special-status plant species are not present in the Study Area;
- Topographic conditions (e.g., slopes, montane conditions) necessary to support the special-status plant species are not present in the Study Area;
- Unique pH conditions (e.g., alkali scalds, acidic bogs) necessary to support the special-status plant species are not present in the Study Area;
- Associated natural communities (e.g., interior chaparral, coniferous forest) necessary to support the special-status plant species are not present in the Study Area;
- The Study Area is geographically isolated (e.g. below elevation, coastal environ) from the documented range of the special-status plant species.

Based on the type and quality of natural communities present within the Study Area, eight special-status plants were determined to have potential to occur. Each species is discussed below and summarized in Appendix C. Focused special-status plant surveys were conducted during the March, April, and May site visits; however, no special-status plants were observed and none are anticipated to occur.

Special-Status Plants with Potential to Occur within the Study Area

Bent-flowered fiddleneck (*Amsinckia lunaris*); CRPR 1B. Moderate Potential. Not Observed. Bent-flowered fiddleneck is an annual forb in the forget-me-not family (Boraginaceae) that blooms from March to June. It typically occurs in open areas within cismontane woodland, valley and foothill grassland, and coastal bluff scrub habitat often underlain by clay substrate at elevations ranging from 10 to 1625 feet (CDFW 2019a, CNPS 2019a). Known associated species include coast live oak, blue oak (*Quercus douglasii*), California juniper (*Juniperus californicus*), buck brush (*Ceanothus cuneatus*), poison oak, miniature lupine (*Lupinus bicolor*), foothill lotus (*Acmispon brachycarpus*), calf lotus (*A. wrangelianus*), fringe pod (*Thysanocarpus curvipes*), q-tips (*Micropus californicus*), cream cups (*Platystemon californicus*), slender tarweed (*Madia gracilis*), common yarrow (*Achillea millefolium*), goldenback fern (*Pentagramma triangularis*), one-sided bluegrass (*Poa secunda*), woolly sunflower (*Eriophyllum lanatum*), and slender wild oat (*Avena barbata*) (CDFW 2019a).

There are eight CNDDB (CDFW 2019a) records of this species in the greater vicinity of the Study Area. The nearest documented occurrence is from May 1953, on Highway 29 approximately two miles northeast of the Study Area (CDFW 2019a). Bent-flowered fiddleneck was originally determined to have a moderate potential to occur in the grassland and open woodland habitat within the Study Area due to the presence of suitable substrates and associated species in woodland and grassland habitat. However, this species was not observed during the focused surveys in March and April and is considered absent.

Congested-headed hayfield tarplant (*Hemizonia congesta* ssp. *congesta*); CRPR 1B. Moderate Potential. Not Observed. Congested-headed hayfield tarplant is an annual herb in the sunflower family (Asteraceae) that blooms from April to November. It typically occurs in grassy areas and fallow fields in coastal scrub, and valley and foothill grassland at elevations ranging from 65 to 1,840 feet (CDFW 2019a, CNPS 2019a). Known associated species include coast live oak, white hyacinth (*Triteleia hyacinthina*), Italian rye grass (*Festuca perennis*), little rattlesnake

grass (*Briza minor*), pennyroyal (*Mentha pulegium*), and spiny-fruited buttercup (*Ranunculus muricatus*) (CDFW 2019a).

There is one CNDDB (CDFW 2019a) record of this species in the greater vicinity of the Study Area. This documented occurrence is from 1980 along Highway 29, approximately two miles northeast of the Study Area (CDFW 2019a). Congested-headed hayfield tarplant was originally determined to have a moderate potential to occur in the grassland areas of the Study Area due to the presence of associated species, suitable substrate and the observation of hayfield tarplant (*Hemizonia* sp.) during the October site visit. However, this species was not observed during the focused survey in May and is considered absent.

Colusa layia (*Layia septentrionalis*); CRPR 1B. Moderate Potential. Not Observed. Colusa layia is an annual forb in the sunflower family (Asteraceae) that blooms from April through May. It typically occurs in openings and herbaceous areas underlain by serpentine substrates within chaparral, cismontane woodland, and valley and foothill grassland habitats at elevations ranging from 330 to 3,595 feet (CNPS 2019a, CDFW 2019a). Known associated species include blue oak (*Quercus douglasii*), white-leaf manzanita (*Arctostaphylos manzanita*), wooly sunflower (*Eriophyllum lanatum*), one-sided blue grass (*Poa secunda*), few flowered Collinsia (*Collinsia sparsiflora*), soft chess (*Bromus hordeaceus*), miners lettuce (*Claytonia perfoliata*), cream cups (*Platystemon californicus*), bluehead gilia (*Gilia capitata*), and purple Chinese houses (*Collinsia heterophylla*).

There are 16 CNDDB (CDFW 2019) records of this species in the greater vicinity of the Study Area. The nearest documented occurrence in the vicinity of the Study Area is from 1932 in Cobb Valley, approximately 8 miles northwest of the Study Area (CDFW 2019a). Colusa layia was originally determined to have a moderate potential to occur in the grassland and woodland areas. However, this species was not observed during the focused survey in April and May and is considered absent.

Bristly leptosiphon (*Leptosiphon acicularis*); CRPR 4. Moderate Potential. Not Observed. Bristly leptosiphon is an annual forb in the phlox family (Polemoniaceae) that blooms from April to July. It typically occurs in chaparral, cismontane woodland, coastal prairie, and valley and foothill grassland habitat at elevations ranging from 175 to 4875 feet (CNPS 2019a). Known associated species include bird's-eyes (*Gilia tricolor*), true babystars (*Leptosiphon bicolor*), redstem filaree (*Erodium cicutarium*), purple needlegrass (*Stipa pulchra*), European hair grass (*Aira caryophyllea*), short pod lotus (*Acmispon brachycarpus*), Spanish lotus (*Acmispon americanus*), and miniature lupine (*Lupinus bicolor*) (CCH 2019).

Bristly leptosiphon is known from the Clearlake Highlands, Middletown, and Kelseyville USGS quads (CNPS 2019a). There are seven CCH (2019) records within the vicinity of the Study Area. The nearest documented occurrence is from April 1933 in Middletown. Bristly leptosiphon was originally determined to have a moderate potential to occur in the Study Area due to the presence of suitable habitat, and the relative location of the nearest documented occurrence. However, this species was not observed during the focused survey in April and May and is considered absent.

Jepson's Leptosiphon (*Leptosiphon jepsonii*); CRPR 1B. Moderate Potential. Not Observed. Jepson's Leptosiphon is an annual herb in the phlox family (Polemoniaceae) that blooms from March to May. It typically occurs in open to partially shaded areas on volcanic or serpentine substrate in chaparral and cismontane woodland habitat at elevations ranging from 325 to 1640 feet (CDFW 2019a, CNPS 2019a). Known associated species include California bay laurel (*Umbellularia californica*), coast live oak (*Quercus agrifolia*), toyon (*Heteromeles*

arbutifolia), purple needlegrass (*Stipa pulchra*), California oat grass (*Danthonia californica*), and non-native annual grasses (CDFW 2019a).

There are nine CNDDB (CDFW 2019a) records of this species in the greater vicinity of the Study Area. The nearest documented occurrence is from 1936 in Collayomi Valley (CDFW 2019a). Jepson's leptosiphon was originally determined to have a moderate potential to occur in the oak woodland habitat within the Study Area. However, this species was not observed during the focused survey in March, April or May and is considered absent.

Cobb Mountain lupine (*Lupinus sericatus*). CRPR 1B. High Potential. Not Observed. Cobb Mountain lupine is a perennial forb in the pea family (Fabaceae) that blooms from March to June. It typically occurs in openings in wooded slopes underlain by gravelly, often serpentine, substrate in stands of knobcone pine in chaparral, cismontane woodland, and lower montane coniferous forest at elevations ranging from 890 to 4960 feet (CDFW 2019a, CNPS 2019a). Known associated species include knobcone pine (*Pinus attenuata*), ponderosa pine (*Pinus ponderosa*), California black oak (*Quercus kelloggii*), leather oak (*Q. durata*), Pacific madrone (*Arbutus menziesii*), chamise (*Adenostoma fasciculatum*), coyote brush (*Baccharis pilularis*), manzanita (*Arctostaphylos* spp.), poison oak (*Toxicodendron diversilobum*), woodland tarweed (*Anisocarpus madioides*), forest sedge (*Carex multicaulis*), Sonoma sage (*Salvia sonomensis*), and woolly sunflower (*Eriophyllum lanatum*) (CDFW 2019a).

There are 24 CNDDB (CDFW 2019a) records of this species within the greater vicinity of the Study Area. The nearest documented occurrence is from 1976 located near Putah Creek, approximately 4 miles northwest of the Study Area (CDFW 2019a). Cobb Mountain lupine was originally determined to have a high potential to occur in the Study Area due to the presence of associated species and suitable habitat, suitable substrate, and the relative location of documented occurrences. However, this species was not observed during the focused survey in March, April, and May and is considered absent.

Jepson's navarretia (*Navarretia jepsonii*); CRPR 4. Moderate Potential. Not Observed. Jepson's navarretia is an annual herb in the phlox (Polemoniaceae) family that blooms from April through June. The species typically occurs in transitional zones between cismontane woodland, chaparral, and valley and foothill annual grassland habitats on clay soils (often serpentine) at elevations ranging from 550 to 2,800 feet (CNPS 2019a). Known associated species are not provided in the databases.

The nearest previously documented occurrence of this species in the vicinity of the Study Area is from 1937 in Middletown, with several others along Highway 29 northeast of the Study Area (CCH 2019). Jepson's navarretia was originally determined to have a moderate potential to occur in the grasslands or edge of woodlands. However, this species was not observed during the focused survey in April and May and is considered absent.

Keck's checkerbloom (*Sidalcea keckii*); FE, Rank 1B. Moderate Potential. Not Observed. Keck's checkerbloom is an annual herb in the mallow (Malvaceae) family that blooms from April through June. It typically occurs on exposed serpentine clays in cismontane woodland or non-native valley and foothill grassland habitats at elevations ranging from 250 to 2,200 feet (CNPS 2019a). Known associated species includes grey pine (*Pinus sabiniana*), blue oak (*Quercus douglasii*), tarplant (*Holocarpha* spp.) Italian ryegrass (*Festuca perennis*), soft chess *(Bromus hordeaceus*), and blowives (*Achyrachaena mollis*).

There is one CNDDB (CDFW 2019a) record of this species within the greater vicinity of the Study Area. The nearest documented occurrence in the vicinity of the Study Area is from May 2002 near

Pocock Creek, approximately 12 miles east of the Study Area (CDFW 2019a). This species was originally determined to have moderate potential to occur in the grasslands due to presence of associated species. However, this species was not observed during the focused survey in April or May and is considered absent.

5.2.2 Special-Status Wildlife Species

Based upon a review of the resources databases listed in Section 4.0, it was determined that more than 50 special-status wildlife species have been documented in one or more of the 7.5-minute quadrangles in the vicinity of the Study Area. Figure 4 in Appendix A shows the subset of those species that occur within 5 miles of the Property. Appendix C summarizes the potential for each of these species to occur within the Study Area. During the site visit, no special-status wildlife species were observed within the Study Area; however, 20 special-status wildlife species were determined to have a moderate or high potential to occur within the Study Area based on the type and conditions of habitats observed there. The Study Area does not contain designated critical habitat for any species. The remaining species were determined to be unlikely or have no potential to occur in the Study Area for one or more of the following reasons:

- The Study Area is outside of the known or historical range of the species;
- The Study Area lacks specific habitat requirements (i.e. marsh, old growth conifers, cliffs, mines etc.),
- There are barriers to dispersal that make it unlikely for the species to occur on-site.

Special-status wildlife species determined to be potentially present based on the type and condition of habitats present within the Study Area are listed below; the preferred habitat(s) of each species is summarized in Appendix C. Table 4 lists the special-status wildlife species determined to have potential to occur within the Study Area. A list of all wildlife species observed during the site assessments is included as Appendix B.

Table 4. Special-Status Wildlife Species with the Potential to Occur within the Study Area

Scientific Name	Common Name	Conservation Status*
Species with High Potential to Occur		
Birds		
Selasphorus sasin	Allen's hummingbird	BCC
Baeolophus inornatus	oak titmouse	BCC
Elanus leucurus	white-tailed kite	CFP
Species with Moderate Potential to Occur		
Mammals		
Lasiurus blossevillii	western red bat	SSC, WBWG High
Myotis evotis	long-eared myotis	WBWG Medium

Scientific Name	Common Name	Conservation Status*
Lasiurus cinereus	hoary bat	WBWG Medium
Myotis thysanodes	fringed myotis	WBWG High
Antrozous pallidus	pallid bat	SSC, WBWG
Birds		
Progne subis	purple martin	SSC
Setophaga (Dendroica) petechia brewsteri	yellow warbler	SSC, BCC
Lanius ludovicianus	loggerhead shrike	SSC, BCC
Melanerpes lewis	Lewis' woodpecker	BCC
Picoides nuttallii	Nuttall's woodpecker	BCC
Chamaea fasciata	wrentit	BCC
Asio otus	long-eared owl	SSC
Spinus (= Carduelis) lawrencei	Lawrence's goldfinch	BCC
Contopus cooperi	olive-sided flycatcher	SSC, BCC
Icteria virens	yellow-breasted chat	SSC
Reptiles		
Emmys marmorata	western pond turtle	SSC
Amphibians		
Rana boylii	foothill yellow-legged frog	SSC, SC

CFP California Fully Protected Species
SC State Candidate
SE State Endangered
SSC CDFW Species of Special Concern
WBWG Western Bat Working Group

Mammals

During the site visit on October 22, 2018, no special-status mammals were observed. The only special-status mammals with moderate potential to occur in the Study Area are bats, and no special-status mammals have a high potential to occur. Habitat for bats is marginal, with only a few suitable trees being present that could support roosting. Measures to reduce impacts to special-status bats to a less than significant level are described in Section 6 of this report.

Birds

During the site visit on October 22, 2018, no special-status birds were observed. However, the site does contain habitat that could support nesting for several special-status species, as well as species that receive protections under the California Fish and Game Code and Migratory Bird Treaty Act. Additionally, one California Fully Protected Species, white-tailed kite, could also nest in the Study Area or near enough to the Study Area that nest avoidance buffers for that species could impact future development on the site. Measures to reduce impacts to nesting birds are discussed further in Section 6 of this report.

Amphibians and Reptiles

During the site visit on October 22, 2018, no amphibians were observed. Habitat for special-status amphibians in the Study Area is limited to Dry Creek, which is immediately adjacent to the property, to the west. During the site visit, Dry Creek was entirely dry where it runs along the property boundary and for at least several hundred feet upstream and downstream. No lentic habitats that would support any special-status amphibians were identified during the site visit.

Despite Dry Creek being intermittent, it does have potential to support metamorphosed foothill yellow-legged frog (*Rana boylii*; FYLF), a candidate for listing under the CESA, for most of the year based on aerial imagery. In addition, the stream may be able to support reproduction for the species in most or some years because it contains water beyond August (when tadpoles typically metamorphose). However, the majority of the habitat in the Study Area is a long pool with steep sides at the time of year when breeding occurs, so most of it would not be suitable for FYLF egg laying. Other areas could not be assessed in terms of their capacity to support breeding. That said, this species has been documented up- and downstream of the Study Area (CDFW 2019), so it is possible that metamorphosed FYLF would pass through the Study Area, even if only briefly in transit to or from breeding sites.

Given their protected status under the CESA and potential for presence in or near the Study Area, any impacts to FYLF would need to be addressed in the CEQA process. Impacts to FYLF are reduced significantly if no impacts to the riparian zone occur, because FYLF is a semi-aquatic species and is unlikely to be found far from water. Due to its potential for presence within the Study Area, the CEQA lead agency may request that surveys and/or avoidance measures be implemented to ensure that no take of FYLF occur as a result of the project. Surveys typically consist of a minimum of two discrete surveys during suitable conditions within the Study Area and areas 500 feet up- and downstream. If no FYLF are found during these surveys it is likely that minimal avoidance measures would be recommended. Measures to avoid FYLF are described in Section 6 of this document.

During the site visit on October 22, 2018, no special-status reptiles were observed. The only special-status reptile assessed as having a moderate potential to occur is western pond turtle, and no reptiles were determined to have a high potential to occur. Pond turtles have been documented near the Study Area (CDFW 2019a) and the section of Dry Creek adjacent to the Study Area is suitable for the species for most of the year. Some areas in the riparian zone may be suitable for nesting by the species. Western pond turtle would be unlikely to nest above the stream terraces associated with Dry Creek and is unlikely to traverse areas greater than 300 feet from Dry Creek. If work is to occur within 300 feet of the stream, measures to reduce impacts to western pond turtle to less than significant levels may be required by the CEQA lead agency. These measures are discussed in Section 6.

5.3 Wildlife Corridors

In addition to the special-status wildlife that may occur, non-special-status wildlife species occur and may use portions of the Study Area as a migration corridor. Uncultivated land can be used by a variety of native species to move to various territories seasonally and throughout their life cycle. Within the Study Area, some habitats including, but not limited to the stream corridor associated with Dry Creek may facilitate wildlife movement. Additionally, reservoirs and ponds within close proximity to the Study Area are anticipated to attract native wildlife species. Therefore, portions of the Study Area may occur within one or more wildlife migration corridors.

6.0 RECOMMENDATIONS

6.1 Sensitive Biological Communities

6.1.1 Valley Oak Woodland

The Study Area contains 0.29 acre of valley oak woodland. Valley oak woodlands are considered sensitive by CDFW, and the Lake County General Plan Policy OSC 1.13 requires that oak woodland be maintained and/or improved to the extent feasible to provide for oak woodland and wildlife habitat; however no specific requirements are provided. The oak woodlands should be preserved to the maximum extent practical. If preservation is not practical, mitigation plantings may be necessary if impacts are determined to be significant.

6.1.2 Stream

A portion of Dry Creek is present along the western boundary of the Study Area. Any development should avoid the stream to the extent practical and apply the appropriate stream setback as outlined in the Lake County Code Section 30-9 (Watercourses and Drainage) and/or Article 37 (Regulations for the Waterway or "WW" Combining District). For intermittent streams, a minimum 20 foot setback from the stream TOB is required. If work is to be conducted within the top of bank or ordinary high water mark of Dry Creek, then 404/401 permits from the Corps, RWQCB, and/or a Lake and Streambed Alteration Agreement (LSAA) from CDFW should be acquired.

6.1.3 Riparian Scrub

The Study Area contains 0.25 acre of riparian vegetation. Any development should avoid the riparian vegetation to the extent practical. No specific setbacks are required by Lake County regulations. However, if work is to be conducted within the riparian habitat, then a 401 permit from RWQCB and an LSAA from CDFW should be acquired.

6.1.4 Native Grassland

The Study Area contains 0.83 acre of native grassland. The native grassland is considered sensitive by the CDFW, therefore impacts require consideration under CEQA. Native grassland should be avoided to the extent practical. If avoidance is not practical, mitigation for impacts may be necessary if impacts are determined to be significant.

6.2 Special-Status Species

6.2.1 Special-Status Plants

The Study Area was determined to have the potential to support eight special-status plants. However, no special-status plants were observed during focused surveys conducted in March, April and May 2019. Therefore, it was determined that no special-status plants are likely to occur and no avoidance measures are recommended.

6.2.2 Special-Status Wildlife

Several special-status species were determined to have moderate to high potential to occur, or were observed within the Study Area. One frog, FYLF, a state listed species, and one bird, white-tailed kite, is a California Fully Protected Species. The Study Area is not located within Critical Habitat as designated by USFWS or NMFS. Lake Berryessa forms a total barrier to anadromous fish including steelhead and Chinook salmon, and as such no listed fish species would occur within the reach of Dry Creek that runs along the Study Area. The following recommendations and potential constraints are provided based on the potential for special-status species and their habitat to occur within the Study Area. Where applicable, species with similar requirements and guidance are grouped together.

Mammals

Bats

No bats were observed within the Study Area during the site visit. There is moderate potential for some bat species to occur within the oak trees and riparian woodland within the Study Area. Direct impacts to roosting special-status bat species could occur due to the removal or modification of large living trees (DBH >12 inches) and snags. The destruction or injury of special-status bats or loss of a maternity roost would constitute a potentially significant impact under CEQA and is a violation of the CFGC. Indirect impacts to maternity roosting and/or roosting bat species may include roost abandonment due to noise, increased nighttime lighting, and/or other human disturbances during construction and would also constitute a potentially significant impact under CEQA. The following programmatic-level measures are recommended to avoid impacts to roosting bats during future development of the site:

- Pre-construction survey(s) for bat roosts should be conducted by a qualified biologist in large tees (DBH >12 inches), broadleaf trees in riparian forest habitat, buildings, bridges, and cliffs/rocky outcroppings within 100 feet of a planned work areas. Surveys should occur at least 14 days prior to the start of work, and one or more surveys may be needed for the biologist to evaluate if potential roost habitat occurs and then to determine the type (i.e. maternity or non-maternity) and status (i.e. active or inactive) of the roost. If an active maternity or special-status bat roost is found, and is proposed to be removed or directly impacted as a result of project activities, then consultation with the CDFW will be required.

- Large trees (DBH >12 inches) to be removed should be allowed to lay on the ground for one night to allow any undetected roosting bats to leave the tree before it is chipped or taken offsite.

Birds

Raptors

Raptor nests, including white-tailed kite nests, are protected by the MBTA and CFGC. Protective exclusion buffers around active raptor nests can vary greatly and may extend up to 0.5 mile for some listed species. While project-specific impacts may require additional measures, the following programmatic-level measures are recommended to avoid impacts to raptors:

- Prior to starting construction activities during the nesting season, generally defined as February 1 through August 31, targeted surveys for active raptor nests should be conducted by a qualified biologist. An active nest contains eggs or young.

- For construction activities planned within 0.25 mile of a documented white-tailed kite nest, pre-construction surveys should be conducted in accordance with the most current guidance available from the USFWS and CDFW.

- If a raptor nest containing eggs or young is determined to be present within or adjacent to the work area, then a protective buffer should be established and no project work should occur within the buffered area until the chicks have fledged and no longer require parental support for survival or the nest has been determined to be inactive. Buffer size should be determined by the biologist based on species, nest location, planned disturbance footprint, and presence of any visual or auditory buffers.

Nesting Birds

In addition to white-tailed kite, the site assessment determined that special-status passerine bird species (e.g., Allen's hummingbird, Nuttall's woodpecker, oak titmouse) have a high potential to occur in the Study Area. Several other special-status bird species were determined to have a moderate potential to occur within the Study Area. A variety of native bird species protected under the MBTA as well as the CFCG may also use the Study Area for nesting.

Avoidance of nesting birds is considered a general biological resources "best practice" in California and avoids potential enforcement action by CDFW. Nesting bird pre-construction survey obligations are a common component of various permits and authorizations, including CEQA documents and even local grading permits, and may be deemed applicable to project activities within the Study Area.

Initial vegetation removal, clearing, grubbing activities, along with tree removal and demolition of structures, have the potential to affect nesting migratory birds. Adverse effects to nesting birds covered by the MBTA and the CFGC—including active nests, eggs, and young—would constitute a potential impact that may occur as a result of these activities. While project-specific impacts may require additional measures, the following programmatic-level measures are recommended to avoid impacts to nesting birds:

- If vegetation removal, demolition of buildings or work on bridges, or initial ground disturbance activity occur during the nesting season, defined as February 1 through August 31, then a pre-construction nesting bird survey within the work area should be completed by a qualified biologist no more than 14 days prior to the start of work.

- If active nests (nests with eggs and/or chicks) are observed during the pre-construction survey, project activities should cease within a protective buffer established around the nest by the biologist and work should only resume within the protective buffer after the young have fledged the nest or the nest otherwise becomes inactive. Buffer size should be determined by the biologist based on species, nest location, planned disturbance footprint, and presence of any visual or auditory buffers.

Reptiles and Amphibians

This assessment determined that western pond turtle (WPT) and foothill yellow-legged frog (FYLF) have a moderate potential to occur in the Study Area. Direct impacts to stream features, floodplains, wetlands, ponds, and reservoirs could result in the loss of suitable habitat or potential take of amphibian and reptile species. WRA recommends the development of project-specific avoidance and minimization measures. Work taking place within any river, stream, or lake in the Study Area would require a CDFW-issued Lake or Streambed Alteration Agreement (LSAA). Measures pertaining to aquatic species would be dictated by the LSAA. Measures that may be included in an LSAA are discussed below.

FYLF

Work within streams, riparian areas, and along streamside corridors could impact FYLF by disrupting migratory movements, rearing, or breeding and could result in injury or mortality to individuals. Additional impacts may occur from the removal or altering of habitat, such as those associated with the loss of cover or altering localized water flow. Actions that increase the use of riverine habitats, especially during the breeding and larval rearing stages for FYLF could impact the species. Although there is no time of year when complete avoidance of FYLF is possible, if working in an area where the species is known to occur, there are periods when encountering the species is less likely (CDFW 2018d). Conducting work outside the typical FYLF breeding season and after the onset of autumnal rains, away from wetted features allows for the greatest opportunity for avoidance (CDFW 2018d). While project-specific impacts may require additional measures, the following measures are recommended to avoid impacts to FYLF:

- Activities within 100 feet of the top of bank where FYLF has been documented within the Study Area, or its associated riparian areas, should avoid the FYLF breeding season (March 1 to June 30), and to the extent possible, should be limited to the dry season (July 1 to October 31). No work should occur within 72 hours of rains occurring in October or November when FYLF are likely to be making overland movements.

- Pre-construction surveys should be conducted by a qualified biologist within 5 days of the start of initial project work planned within 100 feet of wetted streams in the Study Area. These surveys should cover at least 500 feet upstream and 500 feet downstream of the work area and should investigate for the presence of all life stages (adults, subadults, tadpoles, or egg masses). If FYLF are observed, the biologist should provide measures to avoid directly impacting the species based on the planned work; such measures may include a protective no-work buffer, exclusion fencing, monitoring, and/or coordination with the CDFW.

FYLF is currently a candidate species for listing under CESA and as such is afforded the protections conveyed by CESA, including protection from "take" without a permit. The clade that occurs in the Project Area has been evaluated as not warranting listing under CESA at this time by the CDFW Staff Review and the CDFG commission has voted to adopt this finding. While the species is technically still a candidate for listing, the ending of candidacy for this clade is imminent and is not likely to result in listing under CESA. However, this clade will remain a species of special concern and will continue to be considered during CEQA processes and permitting processes administered by CDFW. While the implementation of the above described measures should minimize impacts to the species, there is a potential for incidental take of FYLF to occur during work activities in and adjacent to FYLF habitat and this take would still require an ITP, if it occurs during the candidacy period.

WPT

This assessment determined that western pond turtle (WPT) could be present in the Study Area during most parts of the year. Direct impacts to stream features and floodplains could result in the loss of suitable habitat or potential take of pond turtles. Direct mortality, loss of aquatic habitat, or loss of nesting habitat may be considered potentially significant impacts under CEQA. While project-specific impacts may require additional measures, the following measures are recommended to avoid impacts to WPT:

- To the extent possible, initial ground disturbance, vegetation clearing, and associated project activities within 300 feet of Dry Creek are recommended to occur during the dry season (July 1 – October 31).

- Within 14 days prior to the start of work, pre-construction surveys for WPT should occur within 300 feet of Dry Creek. If WPT is observed, the biologist should provide measures to avoid directly impacting the species based on the planned work; such measures may include a protective no-work buffer, exclusion fencing, monitoring, or coordination with the CDFW.

6.3 Wildlife Corridors

This assessment determined that portions of the Study Area may facilitate wildlife movement and may be considered a wildlife corridor. Changes in land use, such as the conversion of raw land to agriculture or installation of buildings and fencing, and increased presence of human disturbance, can diminish or eliminate qualities that make an area a corridor for native species. Under CEQA, project impacts to wildlife corridors are assessed and evaluated.

The Study Area is positioned in an agricultural and urban setting. Development nearby consists of low-density housing with increasingly dense residential and commercial areas to the east. The remaining areas are in current or historic agriculture. None of the areas immediately near the Study Area are entirely natural. The Study Area is likely to serve as a corridor and habitat for a number of species commonly associated with edge habitats such as deer, raccoons, etc. Large mammalian predators would likely avoid the Study Area due to the relatively high density of development. Dry Creek and its riparian zone, along the western edge of the Study Area, is the most likely corridor for transiting wildlife such as frogs and turtles. Some mammals such as otters may use it for movement while it is inundated, and terrestrial animals such as coyotes may use its adjacent riparian edge year round or use the channel itself when it is dry. Provided that a riparian buffer is maintained around the stream, it is unlikely that project activities would alter the Dry Creek's capacity to serve as a corridor from its current condition.

APPENDIX B

PLANT AND WILDLIFE SPECIES OBSERVED WITHIN THE STUDY AREA

Appendix B: Plant and Wildlife Species Observed within the Study Area.

Table B-1. Plant Species

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Acmispon americanus var. *americanus*	Spanish lotus	native	annual herb	-	-	UPL
Acmispon brachycarpus	Short podded lotus	native	annual herb	-	-	-
Acmispon wrangelianus	Chilean trefoil	native	annual herb	-	-	-
Aegilops cylindrica	Jointed goatgrass	non-native	annual grass	-	Watch	-
Agoseris heterophylla	Mountain dandelion	native	annual herb	-	-	-
Ailanthus altissima	Tree of heaven	non-native (invasive)	tree	-	Moderate	FACU
Aira caryophyllea	Silvery hairgrass	non-native	annual grass	-	-	FACU
Ancistrocarphus filagineus	Woolly fishhooks	native	annual herb	-	-	-
Aphanes occidentalis	Ladie's mantle	native	annual, perennial herb	-	-	-
Artemisia douglasiana	California mugwort	native	perennial herb	-	-	FAC
Avena barbata	Slim oat	non-native (invasive)	annual, perennial grass	-	Moderate	-
Baccharis pilularis	Coyote brush	native	shrub	-	-	-
Brassica nigra	Black mustard	non-native (invasive)	annual herb	-	Moderate	-
Brickellia californica	California brickellia	native	perennial herb	-	-	FACU

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Briza minor	Little rattlesnake grass	non-native	annual grass	-	-	FAC
Brodiaea elegans ssp. *elegans*	Harvest brodiaea	native	perennial herb	-	-	FACU
Bromus diandrus	Ripgut brome	non-native (invasive)	annual grass	-	Moderate	-
Bromus hordeaceus	Soft chess	non-native (invasive)	annual grass	-	Limited	FACU
Bromus madritensis	Foxtail chess, foxtail brome	non-native	annual grass	-	-	UPL
Calandrinia menziesii	Red maids	native	annual herb	-	-	FACU
Capsella bursa-pastoris	Shepherd's purse	non-native	annual herb	-	-	FACU
Cardamine hirsuta	Hairy bitter cress	non-native	annual herb	-	-	FACU
Castilleja exserta ssp. *exserta*	Purple owl's clover	native	annual herb	-	-	-
Centaurea solstitialis	Yellow starthistle	non-native (invasive)	annual herb	-	High	-
Clarkia purpurea ssp. *quadrivulnera*	Purple clarkia	native	annual herb	-	-	-
Claytonia parviflora ssp. *parviflora*	Miner'slettuce	native	annual herb	-	-	FACU
Claytonia perfoliata	Miner's lettuce	native	annual herb	-	-	FAC
Croton setiger	Turkey-mullein	native	perennial herb	-	-	-
Cynosurus echinatus	Dogtail grass	non-native (invasive)	annual grass	-	Moderate	-
Cyperus eragrostis	Tall cyperus	native	perennial grasslike herb	-	-	FACW

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Daucus pusillus	Wild carrot	native	annual herb	-	-	-
Elymus caput-medusae	Medusa head	non-native (invasive)	annual grass	-	High	-
Elymus multisetus	Big squirreltail grass	native	perennial grass	-	-	-
Epilobium canum	California fuchsia	native	perennial herb	-	-	-
Epilobium ciliatum	Slender willow herb	native	perennial herb	-	-	FACW
Epilobium minutum	Minute willowherb	native	annual herb	-	-	FACU
Erigeron canadensis	Canada horseweed	native	annual herb	-	-	FACU
Eriodictyon californicum	Yerba santa	native	shrub	-	-	-
Eriogonum sp.	buckwheat	native	perennial herb	-	-	-
Erodium botrys	Big heron bill	non-native	annual herb	-	-	FACU
Erodium cicutarium	Red stemmed filaree	non-native (invasive)	annual herb	-	Limited	-
Erodium moschatum	White-stem filaree	non-native	annual herb	-	-	-
Eschscholzia californica	California poppy	native	annual, perennial herb	-	-	-
Euthamia occidentalis	Western goldenrod	native	perennial herb	-	-	FACW
Festuca arundinacea	Reed fescue	non-native (invasive)	perennial grass	-	Moderate	FACU
Festuca microstachys	Small fescue	native	annual grass	-	-	-

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Festuca myuros	Rattail sixweeks grass	non-native (invasive)	annual grass	-	Moderate	FACU
Fraxinus latifolia	Oregon ash	native	tree	-	-	FACW
Galium aparine	Cleavers	native	annual herb	-	-	FACU
Gastridium phleoides	Nit grass	non-native	annual grass	-	-	FACU
Githopsis diffusa ssp. *diffusa*	Southern blue cup	native	annual herb	-	-	FAC
Hemizonia congesta ssp. *clevelandii*	Cleveland's tarweed	native	annual herb	-	-	-
Hirschfeldia incana	Short-podded mustard	non-native (invasive)	perennial herb	-	Moderate	-
Hypericum perforatum ssp. *perforatum*	Klamath weed	non-native	perennial herb	-	Moderate	FACU
Hypochaeris radicata	Hairy cats ear	non-native (invasive)	perennial herb	-	Moderate	FACU
Juglans hindsii	Northern California black walnut	native	tree	Rank 1B.1[1]	-	FAC
Juncus xiphioides	Iris leaved rush	native	perennial grasslike herb	-	-	OBL
Lactuca serriola	Prickly lettuce	non-native	annual herb	-	-	FACU
Lagophylla ramosissima	Common hareleaf	native	annual herb	-	-	-
Lamium amplexicaule	Henbit	non-native	annual herb	-	-	-

[1] While Northern California black walnut is considered rare, that designation is only for individuals occurring within the native range of the species, in the vicinity of the Sacramento Delta. Therefore, it is not considered rare within the Study Area.

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Leontodon saxatilis	Hawkbit	non-native	annual herb	-	-	FACU
Lepidium latifolium	Perennial pepperweed	non-native (invasive)	perennial herb	-	High	FAC
Lepidium nitidum	Shining pepper grass	native	annual herb	-	-	FAC
Logfia gallica	Narrowleaf cottonrose	non-native	annual herb	-	-	-
Lupinus affinis	Fleshy lupine	native	annual herb	-	-	-
Lupinus bicolor	Lupine	native	annual, perennial herb	-	-	-
Lupinus nanus	Valley sky lupine	native	annual herb	-	-	-
Lythrum hyssopifolia	Hyssop loosestrife	non-native (invasive)	annual, perennial herb	-	Limited	OBL
Marah fabacea	California man-root	native	perennial herb, vine	-	-	-
Marrubium vulgare	White horehound	non-native (invasive)	perennial herb	-	Limited	FACU
Medicago polymorpha	California burclover	non-native (invasive)	annual herb	-	Limited	FACU
Melilotus indicus	Annual yellow sweetclover	non-native	annual herb	-	-	FACU
Micropus californicus	Q tips	native	annual herb	-	-	FACU
Microsteris gracilis	Slender phlox	native	annual herb	-	-	FACU
Navarretia pubescens	Purple navarretia	native	annual herb	-	-	-
Nemophila menziesii var. *menziesii*	Baby blue eyes	native	annual herb	-	-	-

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Nemophila parviflora	Small flowered nemophila	native	annual herb	-	-	-
Nemophila pedunculata	Meadow nemophila	native	annual herb	-	-	FAC
Plagiobothrys nothofulvus	Rusty haired popcorn flower	native	annual herb	-	-	FAC
Plantago erecta	California plantain	native	annual herb	-	-	-
Plectritis sp.	Plectritis	native	annual herb	-	-	-
Poa bulbosa	Bulbous blue grass	non-native	perennial grass	-	-	FACU
Polypogon monspeliensis	Annual beard grass	non-native (invasive)	annual grass	-	Limited	FACW
Quercus lobata	Valley oak	native	tree	-	-	FACU
Rumex crispus	Curly dock	non-native (invasive)	perennial herb	-	Limited	FAC
Rumex pulcher	Fiddleleaf dock	non-native	perennial herb	-	-	FAC
Rumex salicifolius	Willow leaved dock	native	perennial herb	-	-	FACW
Salix exigua	Narrowleaf willow	native	tree, shrub	-	-	FACW
Salix lasiolepis	Arroyo willow	native	tree, shrub	-	-	FACW
Sambucus nigra ssp. *caerulea*	Blue elderberry	native	shrub	-	-	FAC
Scleranthus annuus ssp. annuus	German knotgrass	non-native	annual herb	-	-	FACU
Secale cereale	Rye	non-native	annual grass	-	-	-

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Senecio vulgaris	Common groundsel	non-native	annual herb	-	-	FACU
Sidalcea diploscypha	Fringed checker mallow	native	annual herb	-	-	-
Silene gallica	Common catchfly	non-native	annual herb	-	-	-
Stellaria nitens	Shining chickweed	native	annual herb	-	-	-
Thysanocarpus curvipes	Common fringe pod	native	annual herb	-	-	-
Toxicodendron diversilobum	Poison oak	native	vine, shrub	-	-	FACU
Trichostema laxum	Turpentine weed	native	annual herb	-	-	-
Trifolium ciliolatum	Tree clover	native	annual herb	-	-	-
Trifolium dubium	Shamrock	non-native	annual herb	-	-	UPL
Trifolium hirtum	Rose clover	non-native (invasive)	annual herb	-	Limited	-
Trifolium microcephalum	Small head clover	native	annual herb	-	-	FAC
Trifolium microdon	Valparaiso clover	native	annual herb	-	-	-
Trifolium willdenovii	Tomcat clover	native	annual herb	-	-	FACW
Triphysaria pusilla	Little owl's clover	native	annual herb	-	-	-
Umbellularia californica	California bay	native	tree	-	-	FAC
Verbascum blattaria	Moth mullein	non-native	perennial herb	-	-	UPL

Scientific name	Common name	Life form	Origin	Rare Status[1]	Invasive Status[2]	Wetland indicator[3]
Verbascum thapsus	Woolly mullein	non-native (invasive)	perennial herb	-	Limited	FACU
Veronica anagallis-aquatica	Water speedwell	non-native	perennial herb	-	-	OBL
Vicia benghalensis	Purple vetch	non-native	annual herb, vine	-	-	-
Vicia sativa	Spring vetch	non-native	annual herb, vine	-	-	FACU
Vitis californica	California wild grape	native	vine, shrub	-	-	FACU
Xanthium strumarium	Cocklebur	native	annual herb	-	-	FAC

[1]Rare Status: The CNPS Inventory of Rare and Endangered Plants (CNPS 2019a)

FE: Federal Endangered
FT: Federal Threatened
SE: State Endangered
ST: State Threatened
SR: State Rare
Rank 1A: Plants presumed extirpated in California and either rare or extinct elsewhere
Rank 1B: Plants rare, threatened, or endangered in California and elsewhere
Rank 2A: Plants presumed extirpated in California, but more common elsewhere
Rank 2B: Plants rare, threatened, or endangered in California, but more common elsewhere
Rank 3: Plants about which we need more information – a review list
Rank 4: Plants of limited distribution – a watch list

[2]Invasive Status: California Invasive Plant Inventory (Cal-IPC 2019)

High: Severe ecological impacts; high rates of dispersal and establishment; most are widely distributed ecologically.
Moderate: Substantial and apparent ecological impacts; moderate-high rates of dispersal, establishment dependent on disturbance; limited-moderate distribution ecologically
Limited: Minor or not well documented ecological impacts; low-moderate rate of invasiveness; limited distribution ecologically
Assessed: Assessed by Cal-IPC and determined to not be an existing current threat

[3]Wetland Status: National List of Plant Species that Occur in Wetlands, Arid West Region (Lichvar et al. 2016)

OBL: Almost always a hydrophyte, rarely in uplands

FACW: Usually a hydrophyte, but occasionally found in uplands
FAC: Commonly either a hydrophyte or non-hydrophyte
FACU: Occasionally a hydrophyte, but usually found in uplands
UPL: Rarely a hydrophyte, almost always in uplands

Table B-2. Observed Wildlife

Common Name	Scientific Name
Mammals	
California mule deer	*Odocoileus hemionus californicus*
coyote	*Canis latrans*
pocket gopher	*Thomomys bottae*
Birds	
acorn woodpecker	*Melanerpes formicivorus*
American crow	*Corvus brachyrhynchos*
Brewer's blackbird	*Euphagus cyanocephalus*
California scrub-jay	*Aphelocoma californica*
California towhee	*Melozone crissalis*
common raven	*Corvus corax*
Eurasian collared-dove	*Streptopelia decaocto*
European starling	*Sturnus vulgaris*
great blue heron	*Ardea herodias*
mourning dove	*Zenaida macroura*
northern flicker	*Colaptes auratus*
northern mockingbird	*Mimus polyglottos*

Common Name	Scientific Name
red-tailed hawk	*Buteo jamaicensis*
turkey vulture	*Cathartes aura*
Reptiles	
western fence lizard	*Sceloporus occidentalis*

APPENDIX C

POTENTIAL FOR SPECIAL-STATUS PLANT AND WILDLIFE SPECIES TO OCCUR WITHIN THE STUDY AREA

Appendix C. Potential for Special-Status Plant and Wildlife Species to Occur within the Study Area. List compiled from database searches focused on the following 7.5-minute USGS quadrangles: Aetna Springs, Detert Reservoir, Jericho Valley, Clearlake Highlands, Lower Lake, Middletown, Mount St. Helena, Whispering Pines and Wilson Valley USGS 7.5' quadrangles (CNPS 2018a, CDFW 2018a; USFWS 2018). List also compiled by a review of other CDFW and USFWS lists and publications (Tomson et al. 2016, Shuford and Gardali 2008, Moyle et al. 2015, USFWS 2008, Bolster 1998, WBWG 2018) focused on the region.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Plants				
Napa false indigo *Amorpha californica var. napensis*	Rank 1B.2	Broadleaved upland forest (openings), chaparral, cismontane woodland. Elevation ranges from 390 to 6560 feet (120 to 2000 meters). Blooms Apr-Jul.	**No Potential.** While the Study Area contains woodland habitat, it is limited in extent and does not have a shrubby understory.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
bent-flowered fiddleneck *Amsinckia lunaris*	Rank 1B.2	Coastal bluff scrub, cismontane woodland, valley and foothill grassland. Elevation ranges from 5 to 1640 feet (3 to 500 meters). Blooms Mar-Jun.	**Moderate Potential.** The Study Area contains grassland habitat which may support this species.	**Not Observed.** This species was not observed during the March or April site visits. No further recommendations.
dimorphic snapdragon *Antirrhinum subcordatum*	Rank 4.3	Chaparral, lower montane coniferous forest. Elevation ranges from 605 to 2625 feet (185 to 800 meters). Blooms Apr-Jul.	**No Potential.** The Study Area does not contain serpentine soils, slopes, nor suitable habitat types.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
twig-like snapdragon *Antirrhinum virga*	Rank 4.3	Chaparral, lower montane coniferous forest. Elevation ranges from 325 to 6610 feet (100 to 2015 meters). Blooms Jun-Jul.	**No Potential.** The Study Area does not contain serpentine soils nor rocky openings. Also suitable habitat types are not present	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
coast rockcress *Arabis blepharophylla*	Rank 4.3	Broadleaved upland forest, coastal bluff scrub, coastal prairie, coastal scrub. Elevation ranges from 5 to 3610 feet (3 to 1100 meters). Blooms Feb-May.	**No Potential.** The Study Area does not contain forest or scrub habitat and is not located very near the coast.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
modest rockcress *Arabis modesta*	Rank 4.3	Chaparral, lower montane coniferous forest. Elevation ranges from 390 to 2625 feet (120 to 800 meters). Blooms Mar-Jul.	**No Potential.** The Study Area does not contain chaparral or coniferous forest habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Oregon rockcress *Arabis oregana*	Rank 4.3	Chaparral, lower montane coniferous forest. Elevation ranges from 1965 to 6005 feet (600 to 1830 meters). Blooms May.	**No Potential.** The Study Area does not contain serpentine soils, chaparral, or coniferous forest.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Konocti manzanita *Arctostaphylos manzanita ssp. elegans*	Rank 1B.3	Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 1295 to 5300 feet (395 to 1615 meters). Blooms (Jan)Mar-May(Jul).	**No Potential.** The Study Area does not contain volcanic soils, chaparral or forest habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Raiche's manzanita *Arctostaphylos stanfordiana ssp. raichei*	Rank 1B.1	Chaparral, lower montane coniferous forest (openings). Elevation ranges from 1475 to 3395 feet (450 to 1035 meters). Blooms Feb-Apr.	**No Potential.** The Study Area does not contain serpentine soils, chaparral or forest habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
serpentine milkweed *Asclepias solanoana*	Rank 4.2	Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 750 to 6100 feet (230 to 1860 meters). Blooms May-Jul(Aug).	**No Potential.** The Study Area does not contain serpentine soils, chaparral or forest habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Brewer's milk-vetch *Astragalus breweri*	Rank 4.2	Chaparral, cismontane woodland, meadows and seeps, valley and foothill grassland (open, often gravelly). Elevation ranges from 295 to 2395 feet (90 to 730 meters). Blooms Apr-Jun.	**Unlikely.** While the Study Area contains grassy flats with gravelly soils, this species typically occurs on or near volcanic or serpentine soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Cleveland's milk-vetch *Astragalus clevelandii*	Rank 4.3	Chaparral, cismontane woodland, riparian forest. Elevation ranges from 655 to 4920 feet (200 to 1500 meters). Blooms Jun-Sep.	**Unlikely.** While the Study Area contains sandy stream bank and gravel bars, this species typically occurs on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Jepson's milk-vetch *Astragalus rattanii var. jepsonianus*	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 965 to 2295 feet (295 to 700 meters). Blooms Mar-Jun.	**Unlikely**. While the Study Area contains grassland habitat, this species typically occurs on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
big-scale balsamroot *Balsamorhiza macrolepis*	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 145 to 5100 feet (45 to 1555 meters). Blooms Mar-Jun.	**Unlikely.** While the Study Area contains grassland habitat, this species is typically not found in alluvial valleys and generally found on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
narrow-anthered brodiaea *Brodiaea leptandra*	Rank 1B.2	Broadleaved upland forest, chaparral, cismontane woodland, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 360 to 3000 feet (110 to 915 meters). Blooms May-Jul.	**Unlikely.** While the Study Area contains grassland habitat, this species is typically found on volcanic soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Indian Valley brodiaea *Brodiaea rosea*	SE, Rank 1B.1	Closed-cone coniferous forest, chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 1095 to 4755 feet (335 to 1450 meters). Blooms May-Jun.	**No Potential.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
serpentine reed grass *Calamagrostis ophitidis*	Rank 4.3	Chaparral (open, often north-facing slopes), lower montane coniferous forest, meadows and seeps, valley and foothill grassland. Elevation ranges from 295 to 3495 feet (90 to 1065 meters). Blooms Apr-Jul.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
pink star-tulip *Calochortus uniflorus*	Rank 4.2	Coastal prairie, coastal scrub, meadows and seeps, north coast coniferous forest. Elevation ranges from 30 to 3510 feet (10 to 1070 meters). Blooms Apr-Jun.	**Unlikely.** While the Study Area contains grassland habitat, no seasonally moist meadows are present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
four-petaled pussypaws *Calyptridium quadripetalum*	Rank 4.3	Chaparral, lower montane coniferous forest. Elevation ranges from 1030 to 6695 feet (315 to 2040 meters). Blooms Apr-Jun.	**No Potential.** The Study Area does not contain chaparral or coniferous forest habitat, nor serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Mt. Saint Helena morning-glory *Calystegia collina ssp. oxyphylla*	Rank 4.2	Chaparral, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 915 to 3315 feet (279 to 1010 meters). Blooms Apr-Jun.	**No Potential.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
South Coast Range morning-glory *Calystegia collina ssp. venusta*	Rank 4.3	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 1390 to 4890 feet (425 to 1490 meters). Blooms Apr-Jun.	**No Potential.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
northern meadow sedge *Carex praticola*	Rank 2B.2	Meadows and seeps (mesic). Elevation ranges from 0 to 10500 feet (0 to 3200 meters). Blooms May-Jul.	**No Potential.** The Study Area does not contain wet meadow habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
pink creamsacs *Castilleja rubicundula var. rubicundula*	Rank 1B.2	Chaparral (openings), cismontane woodland, meadows and seeps, valley and foothill grassland. Elevation ranges from 65 to 2985 feet (20 to 910 meters). Blooms Apr-Jun.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Rincon Ridge ceanothus *Ceanothus confusus*	Rank 1B.1	Closed-cone coniferous forest, chaparral, cismontane woodland. Elevation ranges from 245 to 3495 feet (75 to 1065 meters). Blooms Feb-Jun.	**No Potential.** The Study Area does not contain forest or chaparral habitat nor volcanic or serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Calistoga ceanothus *Ceanothus divergens*	Rank 1B.2	Chaparral (serpentine or volcanic, rocky). Elevation ranges from 555 to 3115 feet (170 to 950 meters). Blooms Feb-Apr.	**No Potential.** The Study Area does not contain chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
holly-leaved ceanothus *Ceanothus purpureus*	Rank 1B.2	Chaparral, cismontane woodland. Elevation ranges from 390 to 2100 feet (120 to 640 meters). Blooms Feb-Jun.	**No Potential.** The Study Area does not contain chaparral habitat nor volcanic soils and only limited woodland habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Sonoma ceanothus *Ceanothus sonomensis*	Rank 1B.2	Chaparral (sandy, serpentine or volcanic). Elevation ranges from 705 to 2625 feet (215 to 800 meters). Blooms Feb-Apr.	**No Potential.** The Study Area does not contain chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
pappose tarplant *Centromadia parryi ssp. parryi*	Rank 1B.2	Chaparral, coastal prairie, meadows and seeps, marshes and swamps (coastal salt), valley and foothill grassland (vernally mesic). Elevation ranges from 0 to 1380 feet (0 to 420 meters). Blooms May-Nov.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs in alkaline, vernally mesic areas which are absent. Additionally, no *Centromadia* spp. were observed during the October site visit.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
dwarf soaproot *Chlorogalum pomeridianum var. minus*	Rank 1B.2	Chaparral (serpentine). Elevation ranges from 1000 to 3280 feet (305 to 1000 meters). Blooms May-Aug.	**No Potential.** The Study Area does not contain chaparral habitat or serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Tracy's clarkia *Clarkia gracilis ssp. tracyi*	Rank 4.2	Chaparral (openings, usually serpentine). Elevation ranges from 210 to 2135 feet (65 to 650 meters). Blooms Apr-Jul.	**No Potential.** The Study Area does not contain chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
serpentine collomia *Collomia diversifolia*	Rank 4.3	Chaparral, cismontane woodland. Elevation ranges from 655 to 1970 feet (200 to 600 meters). Blooms May-Jun.	**No Potential.** The Study Area does not contain serpentine soils nor chaparral habitat and limited woodland habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
serpentine bird's-beak *Cordylanthus tenuis ssp. brunneus*	Rank 4.3	Closed-cone coniferous forest, chaparral, cismontane woodland. Elevation ranges from 1000 to 3000 feet (305 to 915 meters). Blooms Jul-Aug.	**No Potential.** The Study Area does not contain barren rocky serpentine soil.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
serpentine cryptantha *Cryptantha dissita*	Rank 1B.2	Chaparral (serpentine). Elevation ranges from 1295 to 1905 feet (395 to 580 meters). Blooms Apr-Jun.	**No Potential.** The Study Area does not contain serpentine outcrops.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
mountain lady's-slipper *Cypripedium montanum*	Rank 4.2	Broadleaved upland forest, cismontane woodland, lower montane coniferous forest, north coast coniferous forest. Elevation ranges from 605 to 7300 feet (185 to 2225 meters). Blooms Mar-Aug.	**No Potential.** The Study Area does not contain forest habitat nor slopes and only limited woodland habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
swamp larkspur *Delphinium uliginosum*	Rank 4.2	Chaparral, valley and foothill grassland. Elevation ranges from 1115 to 2000 feet (340 to 610 meters). Blooms May-Jun.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Cascade downingia *Downingia willamettensis*	Rank 2B.2	Cismontane woodland lake margins, valley and foothill grassland lake margins, vernal pools. Elevation ranges from 45 to 3640 feet (15 to 1110 meters). Blooms Jun-Jul(Sep).	**No Potential.** The Study Area does not contain vernal pools or lake margin habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Cascade downingia *Downingia willamettensis*	Rank 2B.2	Cismontane woodland lake margins, valley and foothill grassland lake margins, vernal pools. Elevation ranges from 45 to 3640 feet (15 to 1110 meters). Blooms Jun-Jul(Sep).	**No Potential.** The Study Area does not contain seasonal wetlands or vernal pool habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
marsh horsetail *Equisetum palustre*	Rank 3	Marshes and swamps. Elevation ranges from 145 to 3280 feet (45 to 1000 meters).	**Unlikely.** The Study Area does not contain marsh habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Brandegee's eriastrum *Eriastrum brandegeeae*	Rank 1B.1	Chaparral, cismontane woodland. Elevation ranges from 1390 to 2755 feet (425 to 840 meters). Blooms Apr-Aug.	**No Potential.** The Study Area does not contain chaparral habitat nor volcanic soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
streamside daisy *Erigeron biolettii*	Rank 3	Broadleaved upland forest, cismontane woodland, north coast coniferous forest. Elevation ranges from 95 to 3610 feet (30 to 1100 meters). Blooms Jun-Oct.	**No Potential.** The Study Area does not contain forest habitat nor slopes. Additionally, the Study Area does not contain rocky outcrops or ledges.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Greene's narrow-leaved daisy *Erigeron greenei*	Rank 1B.2	Chaparral (serpentine or volcanic). Elevation ranges from 260 to 3295 feet (80 to 1005 meters). Blooms May-Sep.	**Unlikely.** The Study Area does not contain chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Snow Mountain buckwheat *Eriogonum nervulosum*	Rank 1B.2	Chaparral (serpentine). Elevation ranges from 980 to 6905 feet (300 to 2105 meters). Blooms Jun-Sep.	**No Potential.** The Study Area does not contain chaparral habitat or serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
bay buckwheat *Eriogonum umbellatum var. bahiiforme*	Rank 4.2	Cismontane woodland, lower montane coniferous forest. Elevation ranges from 2295 to 7220 feet (700 to 2200 meters). Blooms Jul-Sep.	**Unlikely.** The Study Area does not contain coniferous forest nor woodland habitat on serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Loch Lomond button-celery *Eryngium constancei*	FE, SE, Rank 1B.1	Vernal pools. Elevation ranges from 1505 to 2805 feet (460 to 855 meters). Blooms Apr-Jun.	**No Potential.** The Study Area does not contain vernal pools or lake margin habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Jepson's coyote thistle *Eryngium jepsonii*	Rank 1B.2	Valley and foothill grassland, vernal pools. Elevation ranges from 5 to 985 feet (3 to 300 meters). Blooms Apr-Aug.	**No Potential.** The Study Area does not contain vernal pools or clay soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
bare monkeyflower *Erythranthe nudata*	Rank 4.3	Chaparral, cismontane woodland. Elevation ranges from 655 to 2295 feet (200 to 700 meters). Blooms May-Jun.	**Unlikely.** The Study Area does not contain moist sites on serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
St. Helena fawn lily *Erythronium helenae*	Rank 4.2	Chaparral, cismontane woodland, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 1145 to 4005 feet (350 to 1220 meters). Blooms Mar-May.	**Unlikely.** While the Study Area contains grassland habitat and a limited area of woodland habitat, this species typically occurs in chaparral on serpentine or volcanic soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
adobe-lily *Fritillaria pluriflora*	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 195 to 2315 feet (60 to 705 meters). Blooms Feb-Apr.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on clay or serpentine soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Purdy's fritillary *Fritillaria purdyi*	Rank 4.3	Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 570 to 7400 feet (175 to 2255 meters). Blooms Mar-Jun.	**Unlikely.** The Study Area contains a limited area of woodland habitat and does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Boggs Lake hedge-hyssop *Gratiola heterosepala*	SE, Rank 1B.2	Marshes and swamps (lake margins), vernal pools. Elevation ranges from 30 to 7790 feet (10 to 2375 meters). Blooms Apr-Aug.	**No Potential.** The Study Area does not contain lake margins or vernal pool habitat, nor clay soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Toren's grimmia *Grimmia torenii*	Rank 1B.3	Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 1065 to 3805 feet (325 to 1160 meters).	**No Potential.** The Study Area contains limited woodland habitat and no open, rocky volcanic rocks.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Hall's harmonia *Harmonia hallii*	Rank 1B.2	Chaparral (serpentine). Elevation ranges from 1000 to 3200 feet (305 to 975 meters). Blooms Apr-Jun.	**No Potential.** The Study Area does not contain chaparral habitat nor is located on hills.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
nodding harmonia *Harmonia nutans*	Rank 4.3	Chaparral, cismontane woodland. Elevation ranges from 245 to 3200 feet (75 to 975 meters). Blooms Mar-May.	**Unlikely.** The Study Area contains limited woodland habitat and does not contain rocky volcanic soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
serpentine sunflower *Helianthus exilis*	Rank 4.2	Chaparral, cismontane woodland. Elevation ranges from 490 to 5005 feet (150 to 1525 meters). Blooms Jun-Nov.	**Unlikely.** The Study Area does not contain serpentine seeps or chaparral habitat and has limited woodland habitat. Additionally, the species was not observed during the October site visit.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
congested-headed hayfield tarplant *Hemizonia congesta ssp. congesta*	Rank 1B.2	Valley and foothill grassland. Elevation ranges from 65 to 1835 feet (20 to 560 meters). Blooms Apr-Nov.	**Moderate Potential.** The Study Area contains grassland habitat.	**Not Observed**. This species was not observed during the May site visit. No further recommendations.
glandular western flax *Hesperolinon adenophyllum*	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 490 to 4315 feet (150 to 1315 meters). Blooms May-Aug.	**No Potential.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
two-carpellate western flax *Hesperolinon bicarpellatum*	Rank 1B.2	Chaparral (serpentine). Elevation ranges from 195 to 3295 feet (60 to 1005 meters). Blooms May-Jul.	**No Potential.** The Study Area does not contain chaparral habitat nor serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Lake County western flax *Hesperolinon didymocarpum*	SE, Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 1080 to 1200 feet (330 to 365 meters). Blooms May-Jul.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
drymaria-like western flax *Hesperolinon drymarioides*	Rank 1B.2	Closed-cone coniferous forest, chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 325 to 3705 feet (100 to 1130 meters). Blooms May-Aug.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Sharsmith's western flax *Hesperolinon sharsmithiae*	Rank 1B.2	Chaparral. Elevation ranges from 885 to 985 feet (270 to 300 meters). Blooms May-Jul.	**No Potential.** The Study Area does not contain chaparral habitat nor serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Bolander's horkelia *Horkelia bolanderi*	Rank 1B.2	Chaparral, lower montane coniferous forest, meadows and seeps, valley and foothill grassland. Elevation ranges from 1475 to 3610 feet (450 to 1100 meters). Blooms (May)Jun-Aug.	**Unlikely.** While the Study Area contains grassland habitat, no vernal pools or mesic grassland habitat is present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
California satintail *Imperata brevifolia*	Rank 2B.1	Chaparral, coastal scrub, Mojavean desert scrub, meadows and seeps (often alkali), riparian scrub. Elevation ranges from 0 to 3985 feet (0 to 1215 meters). Blooms Sep-May.	**No Potential.** While the Study Area contains riparian habitat,	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Northern California black walnut *Juglans hindsii*	Rank 1B.1	Riparian forest, riparian woodland. Elevation ranges from 0 to 1445 feet (0 to 440 meters). Blooms Apr-May.	**Present**. While the northern California black walnut was observed in the Study Area, this species is only considered rare within its native range near the Sacramento Delta.	**Present**. However, this species is not considered sensitive outside of its native range of the Sacramento Delta. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Santa Lucia dwarf rush *Juncus luciensis*	Rank 1B.2	Chaparral, great basin scrub, lower montane coniferous forest, meadows and seeps, vernal pools. Elevation ranges from 980 to 6695 feet (300 to 2040 meters). Blooms Apr-Jul.	**Unlikely.** While the Study Area contains grassland habitat, no vernal pools or mesic grassland habitat is present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Burke's goldfields *Lasthenia burkei*	FE, SE, Rank 1B.1	Meadows and seeps (mesic), vernal pools. Elevation ranges from 45 to 1970 feet (15 to 600 meters). Blooms Apr-Jun.	**No Potential.** While the Study Area contains grassland habitat, no vernal pools or mesic grassland habitat is present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Colusa layia *Layia septentrionalis*	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 325 to 3595 feet (100 to 1095 meters). Blooms Apr-May.	**Moderate Potential.** The Study Area contains grassland habitat on sandy soils.	**Not Observed.** This species was not observed during the April site visit. No further recommendations.
legenere *Legenere limosa*	Rank 1B.1	Vernal pools. Elevation ranges from 0 to 2885 feet (1 to 880 meters). Blooms Apr-Jun.	**No Potential.** The Study Area does not contain vernal pool habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
bristly leptosiphon *Leptosiphon acicularis*	Rank 4.2	Chaparral, cismontane woodland, coastal prairie, valley and foothill grassland. Elevation ranges from 180 to 4920 feet (55 to 1500 meters). Blooms Apr-Jul.	**Moderate Potential.** The Study Area contains grassland habitat.	**Not Observed.** This species was not observed during the April site visit. No further recommendations.
Jepson's leptosiphon *Leptosiphon jepsonii*	Rank 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 325 to 1640 feet (100 to 500 meters). Blooms Mar-May.	**Moderate Potential.** The Study Area contains grassland habitat and a small patch of oak woodland which provide suitable habitat for this species. Additionally, there is a mapped occurrence very near the Study Area.	**Not Observed.** This species was not observed during the April site visit. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
woolly-headed lessingia *Lessingia hololeuca*	Rank 3	Broadleaved upland forest, coastal scrub, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 45 to 1000 feet (15 to 305 meters). Blooms Jun-Oct.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on clay or serpentine soils which are absent. Additionally, no Lessingia spp. were observed during the October site visit.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Bolander's lily *Lilium bolanderi*	Rank 4.2	Chaparral, lower montane coniferous forest. Elevation ranges from 95 to 5250 feet (30 to 1600 meters). Blooms Jun-Jul.	**No Potential.** The Study Area does not contain chaparral or coniferous forest habitat, nor serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
woolly meadowfoam *Limnanthes floccosa ssp. floccosa*	Rank 4.2	Chaparral, cismontane woodland, valley and foothill grassland, vernal pools. Elevation ranges from 195 to 4380 feet (60 to 1335 meters). Blooms Mar-May(Jun).	**Unlikely.** While the Study Area contains grassland habitat, no vernal pools or mesic grassland habitat is present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Sebastopol meadowfoam *Limnanthes vinculans*	FE, SE, Rank 1B.1	Meadows and seeps, valley and foothill grassland, vernal pools. Elevation ranges from 45 to 1000 feet (15 to 305 meters). Blooms Apr-May.	**Unlikely.** While the Study Area contains grassland habitat, no vernal pools or mesic grassland habitat is present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Hoover's lomatium *Lomatium hooveri*	Rank 4.3	Chaparral, cismontane woodland. Elevation ranges from 980 to 2905 feet (300 to 885 meters). Blooms Apr-Jul.	**Unlikely.** The Study Area contains limited woodland habitat and no chaparral or serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Napa lomatium *Lomatium repostum*	Rank 4.3	Chaparral, cismontane woodland. Elevation ranges from 295 to 2725 feet (90 to 830 meters). Blooms Mar-Jun.	**Unlikely.** The Study Area contains limited woodland habitat and no chaparral or serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Cobb Mountain lupine *Lupinus sericatus*	Rank 1B.2	Broadleaved upland forest, chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 900 to 5005 feet (275 to 1525 meters). Blooms Mar-Jun.	**Unlikely.** The Study Area does not contain forest or chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Heller's bush-mallow *Malacothamnus helleri*	Rank 3.3	Chaparral (sandstone), riparian woodland (gravel). Elevation ranges from 1000 to 2085 feet (305 to 635 meters). Blooms May-Jul.	**Unlikely.** While the Study Area contains riparian habitat, it is not woodland habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
elongate copper moss *Mielichhoferia elongata*	Rank 4.3	Broadleaved upland forest, chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, meadows and seeps, subalpine coniferous forest. Elevation ranges from 0 to 6430 feet (0 to 1960 meters).	**No Potential.** The Study Area does not contain acidic, metamorphic rock.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
little mousetail *Myosurus minimus ssp. apus*	Rank 3.1	Valley and foothill grassland, vernal pools (alkaline). Elevation ranges from 65 to 2100 feet (20 to 640 meters). Blooms Mar-Jun.	**Unlikely.** While the Study Area contains grassland habitat, no alkaline soils are present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
cotula navarretia *Navarretia cotulifolia*	Rank 4.2	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 10 to 6005 feet (4 to 1830 meters). Blooms May-Jun.	**Unlikely.** While the Study Area contains grassland habitat, no adobe soils are present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Jepson's navarretia *Navarretia jepsonii*	Rank 4.3	Chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 570 to 2805 feet (175 to 855 meters). Blooms Apr-Jun.	**Moderate Potential.** The Study Area contains grassland habitat and edge of woodland habitat.	**Not Observed.** This species was not observed during the April site visit. No further recommendations.
Baker's navarretia *Navarretia leucocephala ssp. bakeri*	Rank 1B.1	Cismontane woodland, lower montane coniferous forest, meadows and seeps, valley and foothill grassland, vernal pools. Elevation ranges from 15 to 5710 feet (5 to 1740 meters). Blooms Apr-Jul.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on adobe or alkaline soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
few-flowered navarretia *Navarretia leucocephala ssp. pauciflora*	FE, ST, Rank 1B.1	Vernal pools (volcanic ash flow). Elevation ranges from 1310 to 2805 feet (400 to 855 meters). Blooms May-Jun.	**No Potential.** The Study Area does not contain vernal pool habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
many-flowered navarretia *Navarretia leucocephala ssp. plieantha*	FE, SE, Rank 1B.2	Vernal pools (volcanic ash flow). Elevation ranges from 95 to 3115 feet (30 to 950 meters). Blooms May-Jun.	**No Potential.** The Study Area does not contain vernal pool habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
small pincushion navarretia *Navarretia myersii ssp. deminuta*	Rank 1B.1	Vernal pools (clay loam). Elevation ranges from 1160 to 1165 feet (355 to 355 meters). Blooms Apr-May.	**No Potential.** The Study Area does not contain vernal pool habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
adobe navarretia *Navarretia nigelliformis ssp. nigelliformis*	Rank 4.2	Valley and foothill grassland vernally mesic, vernal pools sometimes. Elevation ranges from 325 to 3280 feet (100 to 1000 meters). Blooms Apr-Jun.	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on clay soils which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Porter's navarretia *Navarretia paradoxinota*	Rank 1B.3	Meadows and seeps. Elevation ranges from 540 to 2755 feet (165 to 840 meters). Blooms May-Jun(Jul).	**Unlikely.** While the Study Area contains grassland habitat, this species typically occurs on serpentine soils, which are absent.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Marin County navarretia *Navarretia rosulata*	Rank 1B.2	Closed-cone coniferous forest, chaparral. Elevation ranges from 655 to 2085 feet (200 to 635 meters). Blooms May-Jul.	**No Potential.** The Study Area does not contain coniferous forest or chaparral, nor open rocky habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
slender Orcutt grass *Orcuttia tenuis*	FT, SE, Rank 1B.1	Vernal pools. Elevation ranges from 110 to 5775 feet (35 to 1760 meters). Blooms May-Sep(Oct).	**No Potential.** The Study Area does not contain vernal pools.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Howell's broomrape *Orobanche valida ssp. howellii*	Rank 4.3	Chaparral (serpentine or volcanic). Elevation ranges from 590 to 5710 feet (180 to 1740 meters). Blooms Jun-Sep.	**No Potential.** The Study Area does not contain chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Geysers panicum *Panicum acuminatum var. thermale*	SE, Rank 1B.2	Closed-cone coniferous forest, riparian forest, valley and foothill grassland. Elevation ranges from 1000 to 8105 feet (305 to 2470 meters). Blooms Jun-Aug.	**No Potential.** The Study Area does not contain hot springs.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Sonoma beardtongue *Penstemon newberryi var. sonomensis*	Rank 1B.3	Chaparral (rocky). Elevation ranges from 2295 to 4495 feet (700 to 1370 meters). Blooms Apr-Aug.	**No Potential.** The Study Area does not contain chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Michael's rein orchid *Piperia michaelii*	Rank 4.2	Coastal bluff scrub, closed-cone coniferous forest, chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest. Elevation ranges from 5 to 3000 feet (3 to 915 meters). Blooms Apr-Aug.	**No Potential.** The Study Area does not contain suitable habitat types nor mudstone soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
eel-grass pondweed *Potamogeton zosteriformis*	Rank 2B.2	Marshes and swamps (assorted freshwater). Elevation ranges from 0 to 6100 feet (0 to 1860 meters). Blooms Jun-Jul.	**No Potential.** The Study Area does not contain perennial water.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Lobb's aquatic buttercup *Ranunculus lobbii*	Rank 4.2	Cismontane woodland, north coast coniferous forest, valley and foothill grassland, vernal pools. Elevation ranges from 45 to 1540 feet (15 to 470 meters). Blooms Feb-May.	**Unlikely.** While the Study Area contains grassland habitat, no mesic sites are present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Lake County stonecrop *Sedella leiocarpa*	FE, SE, Rank 1B.1	Cismontane woodland, valley and foothill grassland, vernal pools. Elevation ranges from 1195 to 2590 feet (365 to 790 meters). Blooms Apr-May.	**Unlikely.** While the Study Area contains grassland habitat, no mesic sites are present. Additionally, the soils are not volcanic.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Cleveland's ragwort *Senecio clevelandii var. clevelandii*	Rank 4.3	Chaparral (serpentine seeps). Elevation ranges from 1195 to 2955 feet (365 to 900 meters). Blooms Jun-Jul.	**No Potential.** The Study Area does not contain chaparral habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Keck's checkerbloom *Sidalcea keckii*	FE, Rank 1B.1	Cismontane woodland, valley and foothill grassland. Elevation ranges from 245 to 2135 feet (75 to 650 meters). Blooms Apr-May(Jun).	**Moderate Potential.** The Study Area contains grassland habitat.	**Not Observed.** This species was not observed during the April site visit. No further recommendations.
marsh checkerbloom *Sidalcea oregana ssp. hydrophila*	Rank 1B.2	Meadows and seeps, riparian forest. Elevation ranges from 3605 to 7545 feet (1100 to 2300 meters). Blooms (Jun)Jul-Aug.	**Unlikely.** The Study Area does not contain meadows or riparian forest.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Kenwood Marsh checkerbloom *Sidalcea oregana ssp. valida*	FE, SE, Rank 1B.1	Marshes and swamps (freshwater). Elevation ranges from 375 to 490 feet (115 to 150 meters). Blooms Jun-Sep.	**Unlikely.** The Study Area does not contain marsh habitat.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Tamalpais jewelflower *Streptanthus batrachopus*	Rank 1B.3	Closed-cone coniferous forest, chaparral. Elevation ranges from 1000 to 2135 feet (305 to 650 meters). Blooms Apr-Jul.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Socrates Mine jewelflower *Streptanthus brachiatus ssp. brachiatus*	Rank 1B.2	Closed-cone coniferous forest, chaparral. Elevation ranges from 1785 to 3280 feet (545 to 1000 meters). Blooms May-Jun.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Freed's jewelflower *Streptanthus brachiatus ssp. hoffmanii*	Rank 1B.2	Chaparral, cismontane woodland. Elevation ranges from 1605 to 4005 feet (490 to 1220 meters). Blooms May-Jul.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
green jewelflower *Streptanthus hesperidis*	Rank 1B.2	Chaparral (openings), cismontane woodland. Elevation ranges from 425 to 2495 feet (130 to 760 meters). Blooms May-Jul.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Three Peaks jewelflower *Streptanthus morrisonii ssp. elatus*	Rank 1B.2	Chaparral (serpentine). Elevation ranges from 295 to 2675 feet (90 to 815 meters). Blooms Jun-Sep.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Kruckeberg's jewelflower *Streptanthus morrisonii ssp. kruckebergii*	Rank 1B.2	Cismontane woodland (serpentine). Elevation ranges from 705 to 3395 feet (215 to 1035 meters). Blooms Apr-Jul.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
early jewelflower *Streptanthus vernalis*	Rank 1B.2	Closed-cone coniferous forest, chaparral. Elevation ranges from 2000 to 2000 feet (610 to 610 meters). Blooms Mar-May.	**No Potential.** The Study Area does not contain serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
slender-leaved pondweed *Stuckenia filiformis ssp. alpina*	Rank 2B.2	Marshes and swamps (assorted shallow freshwater). Elevation ranges from 980 to 7055 feet (300 to 2150 meters). Blooms May-Jul.	**No Potential.** The Study Area does not contain lake margins.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
marsh zigadenus *Toxicoscordion fontanum*	Rank 4.2	Chaparral, cismontane woodland, lower montane coniferous forest, meadows and seeps, marshes and swamps. Elevation ranges from 45 to 3280 feet (15 to 1000 meters). Blooms Apr-Jul.	**Unlikely.** The Study Area does not contain marsh habitat nor serpentine soils.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
Napa bluecurls *Trichostema ruygtii*	Rank 1B.2	Chaparral, cismontane woodland, lower montane coniferous forest, valley and foothill grassland, vernal pools. Elevation ranges from 95 to 2230 feet (30 to 680 meters). Blooms Jun-Oct.	**Unlikely.** While the Study Area contains grassland habitat, no individuals were observed during the October site visit.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.
saline clover *Trifolium hydrophilum*	Rank 1B.2	Marshes and swamps, valley and foothill grassland (mesic, alkaline), vernal pools. Elevation ranges from 0 to 985 feet (0 to 300 meters). Blooms Apr-Jun.	**Unlikely.** While the Study Area contains grassland habitat, no mesic sites or vernal pools are present.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
oval-leaved viburnum *Viburnum ellipticum*	Rank 2B.3	Chaparral, cismontane woodland, lower montane coniferous forest. Elevation ranges from 705 to 4595 feet (215 to 1400 meters). Blooms May-Jun.	**No Potential.** While the Study Area contains woodland habitat, it is limited in extent and does not have a shrubby understory.	**Not Observed.** This species was not observed during the March, April and/or May survey. No further recommendations.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Mammals				
American badger *Taxidea taxus*	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Requires friable soils and open, uncultivated ground. Preys on burrowing rodents.	**Unlikely.** The Study Area is mostly composed of previously disced areas and overall density of prey for badgers is low. Areas adjacent to the Study Area are primarily in agriculture or urban development. No evidence of badger was observed during the site visit. As a result, badgers are unlikely to occur in the Study Area.	No further actions are recommended for this species.
Fisher, west coast DPS *Martes pennanti (formerly Martes pennant pacifica)*	FC, SC (threatened), SSC	Intermediate to large-tree stages of coniferous forests and deciduous-riparian areas with high percent canopy closure. Use cavities, snags, logs and rocky areas for cover and denning. Need large areas of mature, dense forest.	**No Potential.** The project does not contain suitable coniferous forest and is located outside of the species range.	No further actions are recommended for this species.
Fringed myotis *Myotis thysanodes*	WBWG	Associated with a wide variety of habitats including dry woodlands, desert scrub, mesic coniferous forest, grassland, and sage-grass steppes. Buildings, mines and large trees and snags are important day and night roosts.	**Moderate Potential.** The Study Area contains agricultural lands that could provide suitable roosting and foraging for this species. A few trees within the Study Area could provide suitable roosting habitat for this species.	Recommendations for this species can be found in Section 6.3
Hoary bat *Lasiurus cinereus*	WBWG	Prefers open forested habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding. Roosts in dense foliage of medium to large trees. Feeds primarily on moths. Requires water.	**Moderate Potential.** The Study Area contains patches of small groves and habitat mosaics, with sparse pine and oak trees. Agricultural areas bordering open water and edge habitats along forested areas provide foraging for this species.	Recommendations for this species can be found in Section 6.3

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Long-eared myotis *Myotis evotis*	WBWG	Occurs in semiarid shrublands, sage, chaparral, and agricultural areas, but is usually associated with coniferous forests from sea level to 9000 feet. Individuals roost under exfoliating tree bark, and in hollow trees, caves, mines, cliff crevices, and rocky outcrops on the ground. They also sometimes roost in buildings and under bridges.	**Moderate Potential.** The Study Area contains patches of small groves and habitat mosaics, with sparse pine and oak trees. Agricultural areas bordering open water and edge habitats along forested areas provide foraging for this species.	Recommendations for this species can be found in Section 6.3
Long-legged myotis *Myotis volans*	WBWG	Primarily found in coniferous forests, but also occurs seasonally in riparian and desert habitats. Large hollow trees, rock crevices and buildings are important day roosts. Other roosts include caves, mines and buildings.	**Unlikely.** The Study Area contains dry woodland and agricultural areas that could provide suitable foraging for this species. Typical roosting sites for this species are absent from the site.	No further actions are recommended for this species.
Pallid bat *Antrozous pallidus*	SSC, WBWG	Found in deserts, grasslands, shrublands, woodlands, and forests. Most common in open areas, forages along river channels. Roost sites include crevices in rocky outcrops and cliffs, caves, mines, trees and various human structures such as bridges, barns, and buildings (including occupied buildings). Roosts must protect bats from high temperatures. Sensitive to disturbance of roosting sites.	**Moderate Potential.** The Study Area contains limited roosting habitat in the form of a few sparse trees. Nearby Dry Creek could provide an adequate foraging area and water source.	Recommendations for this species can be found in Section 6.3
Ring-tailed cat (Ringtail) *Bassariscus astutus*	CFP	Widely distributed throughout most of California, absent from some portions of the Central Valley and northeastern California. Found in a variety of habitats throughout the western US including riparian areas, semi-arid country, deserts, chaparral, oak woodlands, pinyon pine woodlands, juniper woodlands and montane conifer forests usually under 1400m in elevation. Typically uses cliffs or large trees for shelter.	**Unlikely.** The sparse trees within the Study Area combined with its setting in an agricultural and urban environment make it unsuitable to support ringtail.	No further actions are recommended for this species.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Silver-haired bat *Lasionycteris noctivagans*	WBWG	Primarily a forest dweller, feeding over streams, ponds, and open brushy areas. Summer habitats include a variety of forest and woodland types, both coastal and montane. Roosts in hollow trees, snags, buildings, rock crevices, caves, and under bark.	**Moderate Potential.** The Study Area offers limited roosting habitat in the form of several trees with cavities and exfoliated bark. Nearby Dry Creek offers some potential foraging habitat and a suitable water source for much of the year. The onsite habitat is more open than this species typically prefers.	Recommendations for this species can be found in Section 6.3
Townsend's big-eared bat *Corynorhinus townsendii*	SSC, WBWG	This species is associated with a wide variety of habitats from deserts to mid-elevation mixed coniferous-deciduous forest. Females form maternity colonies in buildings, caves and mines and males roost singly or in small groups. Foraging occurs in open forest habitats where they glean moths from vegetation.	**Unlikely.** The Study Area does not contain buildings, mines or caves that would be suitable for roosting. There are occurrences of this species within five miles of the Study Area (CDFW 2018), so the species may occasionally forage but would not roost in the Study Area.	No further actions are recommended for this species.
Western red bat *Lasiurus blossevillii*	SSC, WBWG	This species is highly migratory and is typically solitary, roosting primarily in the foliage of trees or shrubs. It is associated with broad-leaved tree species including cottonwoods, sycamores, alders, and maples. Day roosts are commonly in edge habitats adjacent to streams or open fields, in orchards, and sometimes in urban areas.	**Moderate Potential.** The Study Area contains very few broad-leaved tree species typically associated with this species. Stream channel, riparian, open water and edge habitats provide foraging for this species. Because this species is migratory, it may occasionally forage or day roost in the Study Area.	Recommendations for this species can be found in Section 6.3
Birds				
Allen's hummingbird *Selasphorus sasin*	BCC	Summer resident along the California coast, breeding in a variety of woodland and forest habitats, including parks and gardens with abundant nectar sources. Nest in shrubs and trees with dense vegetation.	**High Potential.** The Study Area contains woodland and riparian habitats with nectar sources and may support nesting.	Recommendations for this species can be found in Section 6.3

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
American peregrine falcon *Falco peregrinus anatum*	FD, SD, CFP, BCC	Year-round resident and winter visitor. Occurs in a wide variety of habitats, though often associated with coasts, bays, marshes and other bodies of water. Nests on protected cliffs and also on man-made structures including buildings and bridges. Preys on birds, especially waterbirds. Forages widely.	**Unlikely.** The Study Area is in a flat area and does not contain cliffs or man-made structures that would support nesting. The species may occasionally pass over the Study Area but is unlikely to linger and would not nest.	No further actions are recommended for this species.
Bald eagle *Haliaeetus leucocephalus*	FD, SE, CFP, BCC	Occurs year-round in California, but primarily a winter visitor. Nests in large trees in the vicinity of larger lakes, reservoirs and rivers. Wintering habitat somewhat more variable but usually features large concentrations of waterfowl or fish.	**Unlikely.** The Study Area and its immediate vicinity to not contain large reservoirs, lakes or rivers that would support bald eagles. The species may occasionally forage in or near the Study Area, but is unlikely to linger or nest within it.	No further actions are recommended for this species.
San Clemente Spotted towhee *Pipilo maculatus clementae*	BCC	May be found only on Santa Catalina Island. May be extirpated from San Clemente Island. Found in chaparral, brushy thickets, brushy ravines and willow thickets	**No Potential.** The Study Area is outside the breeding range for this species. This species is endemic to the Channel Islands off the southern California coast.	No further actions are recommended for this species.
Wrentit *Chamaea fasciata*	BCC	Occupies coastal scrub, suburban yards, chaparral, parks, oak woodlands, mixed evergreen forests, and thickets along creeks.	**Moderate Potential.** The Study Area contains suitable habitat for this species and the species may nest within it.	Recommendations for this species can be found in Section 6.3
Burrowing owl *Athene cunicularia*	SSC, BCC	Year-round resident and winter visitor. Occurs in open, dry grasslands and scrub habitats with low-growing vegetation, perches and abundant mammal burrows. Preys upon insects and small vertebrates. Nests and roosts in old mammal burrows, most commonly those of ground squirrels.	**Unlikely.** This species does not breed in Lake County (CDFW 2018b, eBird 2018). The species may overwinter in the area, but the Study Area has more trees than habitats typically occupied by burrowing owls. Only a few burrows suitable for burrowing owl occupation were observed during the site visit, and none of these showed any evidence of having been occupied by burrowing owl.	No further actions are recommended for this species.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Golden eagle *Aquila chrysaetos*	BCC, CFP	Occurs year-round in rolling foothills, mountain areas, sage-juniper flats, and deserts. Cliff-walled canyons provide nesting habitat in most parts of range; also nests in large trees, usually within otherwise open areas.	**Unlikely.** The Study Area does not contain the open expanses of habitat that golden eagles prefer. Potential prey for the species is limited due to the agricultural and urban setting that is present in and around the Study Area. This species may occasionally fly over the Study Area but is unlikely to linger or nest within it.	No further actions are recommended for this species.
Grasshopper sparrow *Ammodramus savannarum*	SSC	Summer resident. Breeds in open grasslands, generally with low- to moderate-height grasses and scattered shrubs. Well-hidden nests are placed on the ground.	**Unlikely.** The Study Area has only a small area of open grasslands and shrubs are rare. As such, the Study Area would not support this species.	No further actions are recommended for this species.
Lawrence's goldfinch *Spinus (= Carduelis) lawrencei*	BCC	Summer resident; generally uncommon and local. Typically found in arid open woodlands, including oak savannah. Breeding distribution is erratic from year to year.	**Moderate Potential.** The Study Area contains open areas which may support nesting for this species.	Recommendations for this species can be found in Section 6.3
Lewis's woodpecker *Melanerpes lewis*	BCC	Uncommon resident in California occurring on open oak savannahs, broken deciduous and coniferous habitats. Breeds primarily in ponderosa pine forests, riparian woodlands and disturbed pine forests but is also known to nest in orchards and oak woodlands.	**Moderate Potential.** The Study Area contains some oaks and pine trees to support this species, and the Study Area is within the known breeding range of this species (CDFW 2018).	Recommendations for this species can be found in Section 6.3
Loggerhead shrike *Lanius ludovicianus*	BCC, SSC	Year-round resident in open woodland, grassland, savannah and scrub. Prefers areas with sparse shrubs, trees, posts, and other suitable perches for foraging. Preys upon large insects and small vertebrates. Nests are well-concealed in densely-foliaged shrubs or trees.	**Moderate Potential.** The Study Area provides open areas for foraging as well as suitably dense vegetation in scrub and woodland communities to support nesting.	Recommendations for this species can be found in Section 6.3

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Long-eared owl *Asio otus*	SSC	Occurs year-round in California. Nests in trees in a variety of woodland habitats, including oak and riparian, as well as tree groves. Requires adjacent open land with rodents for foraging, and the presence of old nests of larger birds (hawks, crows, magpies) for breeding.	**Moderate Potential.** The Study Area contains riparian habitats adjacent to open lands that could support foraging and nesting.	Recommendations for this species can be found in Section 6.3
Northern spotted owl *Strix occidentalis caurina*	FT, SC, SSC	Year-round resident in dense, structurally complex forests, primarily those with old-growth conifers. . Nests on platform-like substrates in the forest canopy, including in tree cavities. Preys on mammals.	**No Potential.** The Study Area does not contain the dense, old growth coniferous forest this species prefers. The nearest documented occurrence of this species is near Robert Louis Stevenson State Park, 5 miles southwest of the Study Area (CDFW 2018c).	No further actions are recommended for this species.
Nuttall's woodpecker *Picoides nuttallii*	BCC	Year-round resident in lowland woodlands throughout much of California west of the Sierra Nevada. Typical habitat is dominated by oaks; also occurs in riparian woodland. Nests in tree cavities.	**Moderate Potential.** The Study Area contains sparse woodland and tree cavities suitable for nesting.	Recommendations for this species can be found in Section 6.3
Oak titmouse *Baeolophus inornatus*	BCC	Occurs year-round in woodland and savannah habitats where oaks are present, as well as riparian areas. Nests in tree cavities.	**High Potential.** Study Area contains woodland and tree cavities suitable for nesting.	Recommendations for this species can be found in Section 6.3
Olive-sided flycatcher *Contopus cooperi*	SSC, BCC	Summer resident. Typical breeding habitat is montane coniferous forests. At lower elevations, also occurs in wooded canyons and mixed forests and woodlands. Often associated with forest edges. Arboreal nest sites located well off the ground.	**Unlikely.** The Study Area contains sparse woodland and riparian habitats in a lowland position. The species may migrate through the Study Area but is unlikely to linger or nest within it.	No further actions are recommended for this species.
Prairie falcon *Falco mexicanus*	BCC	Year-round resident and winter visitor. Inhabits dry, open terrains, including foothills and valleys. Breeding sites located on steep cliffs. Forages widely.	**Unlikely.** The Study Area does not contain open areas and rocky cliffs that provide potential foraging and nesting habitat for this species.	No further actions are recommended for this species.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Purple martin *Progne subis*	SSC	Inhabits woodlands and low elevation coniferous forests. Nests in old woodpecker cavities and human-made structures. Nest is often located in tall, isolated tree or snag.	**Moderate Potential.** The Study Area contains snags and cavities to support nesting, and this species has been documented to nest within 5 miles of the Study Area (CDFW 2018).	Recommendations for this species can be found in Section 6.3
Short-eared owl *Asio flammeus*	SSC	Occurs year-round, but primarily as a winter visitor; breeding very restricted in most of California. Found in open, treeless areas (e.g., marshes, grasslands) with elevated sites for foraging perches and dense herbaceous vegetation for roosting and nesting. Preys mostly on small mammals, particularly voles.	**Unlikely.** The Study Area contains agricultural areas and some grassland that the species could forage in, but it would not nest within it. This species does not breed in Lake County (CDFW 2018, eBird 2018).	No further actions are recommended for this species.
Tricolored blackbird *Agelaius tricolor*	BCC, SSC, ST	Nearly endemic to California, where it is most numerous in the Central Valley and vicinity. Highly colonial, nesting in dense aggregations over or near freshwater in emergent growth or riparian thickets. Also uses flooded agricultural fields. Abundant insect prey near breeding areas essential.	**Unlikely.** The Study Area contains only a narrow riparian without emergent macrophytes. The species may occasionally forage in the agricultural areas within the Study Area but is unlikely to linger.	No further actions are recommended for this species.
Vaux's swift *Chaetura vauxi*	SSC	Summer resident, breeding primarily in forested areas. Nests in tree cavities, favoring those with a large vertical extent; also uses chimneys and other man-made substrates. Forages aerially for insects.	**Unlikely.** The Study Area does not contain the dense coniferous forest this species prefers, and is outside of the known breeding range of the species (CDFW 2018b).	No further actions are recommended for this species.
White-tailed kite *Elanus leucurus*	CFP	Year-round resident in coastal and valley lowlands with scattered trees and large shrubs, including grasslands, marshes and agricultural areas. Nests in trees, of which the type and setting are highly variable. Preys on small mammals and other vertebrates.	**High Potential.** The Study Area provides foraging habitat for this species and large trees and shrubs that may provide suitable nesting substrates (CDFW 2017b).	Recommendations for this species can be found in Section 6.3

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Yellow warbler *Setophaga (Dendroica) petechia brewsteri*	SSC, BCC	Summer resident throughout much of California. Breeds in riparian vegetation close to water, including streams and wet meadows. Microhabitat used for nesting variable, but dense willow growth is typical. Occurs widely on migration.	**Moderate Potential.** The Study Area contains some riparian areas with dense vegetation to support nesting.	Recommendations for this species can be found in Section 6.3
Yellow-breasted chat *Icteria virens*	SSC	Summer resident, occurring in riparian areas with an open canopy, very dense understory, and trees for song perches. Nests in thickets of willow, blackberry, and wild grape.	**Moderate Potential.** The Study Area contains some riparian areas with dense vegetation to support nesting.	Recommendations for this species can be found in Section 6.3
Yellow-headed blackbird *Xanthocephalus xanthocephalus*	SSC	Summer resident. Breeds colonially in freshwater emergent wetlands with dense vegetation and deep water, often along borders of lakes or ponds. Requires abundant large insects such as dragonflies; nesting is timed for maximum emergence of insect prey.	**Unlikely.** Suitable emergent wetlands to support this colonial breeder are absent from the Study Area. This species may occasionally transit or forage in the Study Area but is unlikely to nest or linger within it.	No further actions are recommended for this species.
Reptiles and Amphibians				
California giant salamander *Dicamptodon ensatus*	SSC	Occurs in the north-central Coast Ranges. Moist coniferous and mixed forests are typical habitat; also uses woodland and chaparral. Adults are terrestrial and fossorial, breeding in cold, permanent or semi-permanent streams. Larvae usually remain aquatic for over a year.	**Unlikely.** The Study Area does not contain moist forest typically occupied by this species. Nearby Dry Creek is a wide, intermittent, low gradient stream with warmer water temperatures than is typically associated with this species.	No further actions are recommended for this species.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
California red-legged frog *Rana draytonii*	FT, SSC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11 to 20 weeks of permanent water for larval development. Associated with quiet perennial to intermittent ponds, stream pools and wetlands. Prefers shorelines with extensive vegetation. Disperses through upland habitats after rains.	**Unlikely.** There are no CNDDB occurrences of the species within 5-miles of the site or in Lake County (CDFW 2018). Dry creek, adjacent to the Study Area, was completely dry during the site visit. The stream does contain water for much of the year, but based on the site visit and aerial imagery, adequate slow water habitats containing emergent are rare or absent. CRLF is unlikely to occur in the Study Area.	No further actions are recommended for this species.
Foothill yellow-legged frog *Rana boylii*	SSC, SC	Found in or near rocky streams in a variety of habitats. Prefers partly-shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis. Feeds on both aquatic and terrestrial invertebrates.	**Moderate Potential.** The species has been documented in adjacent Dry Creek and nearby Putah Creek. (CDFW 2018). The section of Dry Creek that is adjacent to the Study Area was entirely dry during the site visit, but based on aerial imagery probably contains water long enough for the species to reproduce in at least some years.	Recommendations for this species can be found in Section 6.3
Red-bellied newt *Taricha rivularis*	SSC	Inhabits coastal forests from southern Sonoma County northward, with an isolated population in Santa Clara County. Redwood forest provides typical habitat, though other forest types (e.g., hardwood) are also occupied. Adults are terrestrial and fossorial. Breeding occurs in streams, usually with relatively strong flow.	**Unlikely.** The Study Area does not contain suitable redwood or hardwood forest typical of the species habitat requirements. The Study Area is outside the documented range of the species.	No further actions are recommended for this species.
Western pond turtle *Actinemys marmorata*	SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches with aquatic vegetation. Require basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg-laying.	**Moderate Potential.** Adjacent Dry Creek contains suitable habitat for this species for much of the year and pond turtles have been documented nearby (CDFW 2018).	Recommendations for this species can be found in Section 6.3

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Fishes				
Chinook salmon - California coastal ESU *Oncorhynchus tshawytscha*	FT, NMFS	California Coastal Chinook Salmon ESU includes all naturally spawned populations of Chinook salmon from rivers and streams south of the Klamath River (exclusive) to the Russian River (inclusive). Adult numbers depend on pool depth and volume, amount of cover, and proximity to gravel. Water temps >27 degrees C lethal to adults.	**No Potential.** The Study Area does not contain anadromous aquatic habitat necessary to support this species. The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa, which forms a complete fish passage barrier for fish returning from the ocean and blocks this species from the Study Area.	No further actions are recommended for this species.
Clear Lake – Russian River roach *Lavinia symmetricus ssp. 4*	SSC	Habitat generalists. Found in warm intermittent streams as well as cold, well-aerated streams.	**Unlikely.** The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa. This species is only known for Clear Lake and associated tributaries; which is outside of the Study Area. Roach in the Study Area are within the range and distribution of Central California roach, which are not a special-status species.	No further actions are recommended for this species.
Clear Lake hitch *Lavinia exilicauda chi*	ST, SSC	Found only in Clear Lake, Lake County, and associated ponds. Spawns in streams flowing into Clear Lake. Adults found in the limnetic zone. Juveniles found in the nearshore shallow-water habitat hiding in the vegetation.	**Unlikely.** The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa. This species is only known for Clear Lake and associated tributaries; which is outside of the Study Area.	No further actions are recommended for this species.
Clear Lake tule perch *Hysterocarpus traski lagunae*	SSC	Occurs in low elevation streams of the Russian River system. Requires clear, flowing water with abundant cover and deep (> 1 m) pools.	**Unlikely.** The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa. This species is only known for Clear Lake and associated tributaries; which is outside of the Study Area. Tule perch is not known for the upper Putah Creek Watershed.	No further actions are recommended for this species.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Coho salmon - central CA coast ESU *Oncorhynchus kisutch*	FE, SE, NMFS	Federal listing includes populations between Punta Gorda and San Lorenzo River. State listing includes populations south of San Francisco Bay only. Occurs inland and in coastal marine waters. Requires beds of loose, silt-free, coarse gravel for spawning. Also needs cover, cool water and sufficient dissolved oxygen.	**No Potential.** This species is considered extirpated from San Francisco Bay and associated tributaries, including the greater Sacramento River Watershed. The Study Area does not contain anadromous aquatic habitat necessary to support this species. The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa, which forms a complete fish passage barrier for fish returning from the ocean and blocks this species from the Study Area.	No further actions are recommended for this species.
Navarro roach *Lavinia symmetricus navarroensis*	SSC	Occurs only in the Navarro River and its tributaries. Adaptable; found in warm, intermittent streams as well as cold, well-aerated streams.	**Unlikely.** The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa. This species is only known for the Navarro River and its tributaries; which is outside of the Study Area.	No further actions are recommended for this species.
Pacific lamprey *Entosphenus (=Lampetra) tridentatus*	SSC	Spawns between March and July in gravel bottomed streams in riffle habitat. Larvae drift downstream to areas of low velocity and fine substrates and are relatively immobile in the stream substrates.	**No Potential.** The Study Area does not contain anadromous aquatic habitat necessary to support this species. The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa, which forms a complete fish passage barrier for fish returning from the ocean and blocks this species from the Study Area.	No further actions are recommended for this species.
River lamprey *Lampetra ayresi*	SSC	Lower Sacramento River, San Joaquin River and Russian River. May occur in coastal streams north of San Francisco Bay. Adults need clean, gravelly riffles, Ammocoetes need sandy backwaters or stream edges, good water quality and temps < 25 degrees C.	**No Potential.** The Study Area does not contain anadromous aquatic habitat necessary to support this species. The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa, which forms a complete fish passage barrier for fish returning from the ocean and blocks this species from the Study Area.	No further actions are recommended for this species.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Russian River tule perch *Hysterocarpus traski pomo*	SSC	Occurs in low elevation streams of the Russian River system. Requires clear, flowing water with abundant cover and deep (> 1 m) pools.	**Unlikely.** The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa. This species is only known for the Russian River and its tributaries; which is outside of the Study Area.	No further actions are recommended for this species.
Delta Smelt Hypomesus transpacificus	FT, SE,	Lives in the Sacramento-San Joaquin estuary in areas where salt and freshwater systems meet. Occurs seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt; most often at salinities < 2 ppt.	**No Potential.** The Study Area does not contain estuarine habitats and is out of the range of this species.	No further actions are recommended for this species.
Steelhead - Central Valley DPS *Oncorhynchus mykiss*	FT, NMFS	Occurs from the Russian River south to Soquel Creek and Pajaro River. Also in San Francisco and San Pablo Bay Basins. Adults migrate upstream to spawn in cool, clear, well-oxygenated streams. Juveniles remain in fresh water for 1 or more years before migrating downstream to the ocean.	**Unlikely.** The Study Area does not contain anadromous aquatic habitat necessary to support this species. The Study Area is within the upper Putah Creek Watershed that drains into Lake Berryessa, which forms a complete fish passage barrier for fish returning from the ocean and blocks this species from the Study Area.	No further actions are recommended for this species.
Invertebrates				
California freshwater shrimp *Syncaris pacifica*	FE, SE	Endemic to Marin, Napa, and Sonoma counties. Found in low elevation, low gradient streams where riparian cover is moderate to heavy. Shallow pools away from mainstream flow. Winter: undercut banks with exposed roots. Summer: leafy branches touching water.	**No Potential.** The Study Area does not contain perennial streams and the Study Area is not within the documented range of occurrence for this species.	No further actions are recommended for this species.
Conservancy fairy shrimp *Branchinecta conservation*	FE	Endemic to the grasslands of the northern two-thirds of the Central Valley, found in large, turbid pools. Inhabits astatic pools located in swales formed by old, braided alluvium, filled by winter/spring rains, lasting until June.	**No Potential.** This species has not been documented in Lake County (CDFW 2018a, Erikson and Belk, 1999). Additionally, no vernal pools with soil and/or hydrological characteristics that could support this species were observed within the Study Area.	No further actions are recommended for this species.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Valley elderberry longhorn beetle *Desmocerus californicus dimorphus*	FT	Occurs only in the central valley of California, in association with blue elderberry (*Sambucus mexicana*). Prefers to lay eggs in elderberry 2 to 8 inches in diameter; some preference shown for "stressed" elderberry.	**Unlikely.** The Study Area is located outside of this species' documented range in the Central Valley.	No further actions are recommended for this species.
Vernal pool fairy shrimp *Branchinecta lynchi*	FT	Endemic to the grasslands of the Central Valley, central coast mountains, and south coast mountains, in astatic rain-filled pools. Inhabits small, clear-water sandstone-depression pools, and grassy swales, earth slumps, or basalt-flow depression pools.	**No Potential.** This species has not been documented in Lake County (CDFW 2018a, Erikson and Belk, 1999). Additionally, no vernal pools with soil and/or hydrological characteristics that could support this species were observed within the Study Area.	No further actions are recommended for this species.

***Key to Conservation Status:**

FE	Federal Endangered
FT	Federal Threatened
FC	Federal Candidate
BCC	USFWS Birds of Conservation Concern
SE	State Endangered
ST	State Threatened
SC	State Candidate
SSC	CDFW Species of Special Concern
CFP	CDFW Fully Protected Animal
WBWG	Western Bat Working Group High or Medium Priority Species

The CNPS Inventory of Rare and Endangered Plants (CNPS 2019a)

Rank 1A:	Plants presumed extirpated in California and either rare or extinct elsewhere
Rank 1B:	Plants rare, threatened, or endangered in California and elsewhere
Rank 2A:	Plants presumed extirpated in California, but more common elsewhere
Rank 2B:	Plants rare, threatened, or endangered in California, but more common elsewhere
Rank 3:	Plants about which we need more information – a review list
Rank 4:	Plants of limited distribution – a watch list

****Potential to Occur:**

No Potential. Habitat on and adjacent to the site is clearly unsuitable for the species requirements (cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).

Unlikely. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.

Moderate Potential. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.

High Potential. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.

Present. Species was observed on the site or has been recorded (i.e. CNDDB, other reports) on the site recently.

APPENDIX CCWD

CALLAYOMI COUNTY WATER DISTRICT WILL SERVE LETTER

Callayomi County Water District

December 5, 2019

Ms. Michalyn DelValle
Director, Planning Department
County of Lake
255 N. Forbes Street
Lakeport, CA 95453

Re: Maha Santa Clara Subdivision – Middletown, CA

Dear Ms. DelValle:

This is to notify you that the Callayomi Water District (hereinafter referred to as "District") has been requested by Santa Clara Investments (hereinafter referred to as "Developer") to provide water to serve 14 duplexes (28 connections), 21 single family residential services and a community building with swimming pool on APN 014-380-09. Please be advised that based on the preliminary information provided to the District from the Developer regarding this development, the District will be able to provide water service for domestic and fire protection uses to the proposed development, subject to the following conditions:

1. **On-Site Improvements**. Developer shall design and construct, at Developer's sole expense, all water system improvements, modifications and/or corrections on Developer's site, ("the On-Site Improvement(s)") in accordance with Callayomi County Water District Design Standards and Construction Standards, in effect at the time of construction, including:

A. Developer shall submit water system improvement plans and specifications prepared by a Civil Engineer licensed in the State of California to District for District's Design Review and approval.

1) Submittals for Engineering Plan Check shall be made at the District Office.

2) All improvements shall be in accordance with the Lake County Standard Details and Specifications and the Callayomi County Water District Design Standards and Standard Details and District Master Plan. A copy of the District Standard Requirements and Details sheet shall be included in the drawings.

3) Design submittals shall include calculations indicating average and peak use, storage requirements and flow requirements including fire flow. Minimum main size shall be 6 inches. Verification of water main sizes will be dependent on a District-run analysis once design information is provided to the District to verify flows and demands.

Callayomi County Water District
P.O. Box 623
Middletown, CA 95461

4) Backflow Prevention devices will be required in accord with the requirements of the Callayomi Water District Backflow Prevention Ordinance.

5) The applicant shall indicate in writing to the District the disposition of any water well(s) and any other water that may exist within the site. If any wells are proposed to be abandoned, or if they are abandoned and have not been properly sealed, they must be shall be destroyed in accord with State of California Health Department Requirements. If a well is to be retained, the District water service to the property shall be equipped with a Backflow Prevention Device in accord with District Standards.

6) The improvement plans shall show water services to each building.

7) Existing water service laterals shall be abandoned and/or new water laterals shall be constructed in accord with Lake County and District Standards. Meter locations shall be subject to approval by the District.

8) Fire protection shall be in accord with the requirements of Fire Department. With the submittal of the improvement plans, calculations shall be provided to the District and the Fire Department to ensure that adequate water pressures are available to supply hydrant flows and sprinkler flows.

9) The improvement plans shall show fire hydrants installed on new mains at a maximum of 500-foot spacing.

10) All easements for water lines shall be a minimum of 15 ft. All easements shall be shown on the final map. The final map shall be submitted to the District for review of easement information.

11) Plan Check Deposit shall be paid at the time of submittal. Call (707) 987- 2180 for information.

B. Developer shall not commence construction without written approval by District of the proposed water system improvement plans and specifications.

C. Construction of water system improvements shall be subject to inspection and approval by District-designated personnel.

D. During construction, the following conditions shall apply:

1) All construction shall conform to the District Standard Details, the Lake County Standard Specifications and Details, all District Ordinances and the approved plans.

2) The developer shall complete all water improvements, including pressure and bacterial testing prior to connection of any buildings to the District water system.

3) All hydrants shall be covered with bags indicating that the hydrant is not active until flow tests are completed by the District and the hydrants are approved.

4) Prior to final preparation of the subgrade and placement of base materials, all underground water utilities shall be installed and service connections stubbed out behind the sidewalk. Water lines shall be installed in a manner which will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

5) If the existing District infrastructure is damaged during construction, the contractor/developer shall be responsible for repair at no cost to the District.

6) If, during construction, the contractor damages any existing facilities on the neighboring properties (i.e. fences, gates, landscaping, walls, etc.) contractor shall be responsible to replace all damaged facilities.

E. Project acceptance is contingent upon submission to District of as-built drawings and other documents (the "As-Built Documentation") acceptable to District as to form and content, as indicated by written approval of same. Developer and District may agree to District preparing, at Developer's expense, some or all of As-Built Documentation.

F. Developer shall reimburse District for District's costs of Design Review, Construction Inspection, and preparation and/or review of As-Built Documentation, before final inspection approval.

G. Developer shall not connect On-Site improvements to District's system until District has delivered written notice of acceptance of Developer's Improvements to Developer and any further County final approvals and/or stipulations are met.

H. Only District personnel will operate valves between Developer's Project and District's facilities.

I. District will require a Performance Bond and Warranty Bond for all On-Site Improvement(s), if all such bonds are not required by the County as improvement security, as a condition of filing of the final subdivision map.

1) Developer shall post a Performance Bond in the amount of 100% of the construction cost of the improvements as security for performance and to ensure the eventual completion of said project, or any parts or phases thereof, as a condition of filing of the final subdivision map. Said Performance Bond shall be held until said improvements have been completed to the satisfaction of the District.

2) A One-Year Warranty Bond in the amount of 10% of the final construction cost of the improvements will be required to be held for one year past completion of all phases of the project to protect the District from any defects in materials and workmanship which were not revealed prior to and/or during the final inspection.

J. The applicant shall execute a covenant running with the land on behalf of itself and its successors, heirs, and assigns agreeing to participate in the formation of an assessment district or other financing technique including, but not limited to, the payment of Water mitigation

fees, which the District may implement or adopt, to fund water improvements directly or indirectly affected by the development and agree to waive all rights of protest.

K. All costs, charges and/or fees due the District related to On-Site Improvements shall be paid to the District prior to the filing of the final subdivision map.

2. Off-Site Improvements. Off-Site Improvements may be required to be constructed by the District and/or Developer, as determined by the District. Specific conditions include, but are not limited to:

A. Off-Site Improvements Constructed by District.

1) Developer shall financially participate in the costs of Design, Design Review, Construction, Inspection, and As-Built Documentation, of all water system improvements off Developer's site ("the Off-Site Improvement(s)") made necessary by Developer's Project, whether these costs are incurred by District or District's personnel, District's consultants, by Developer, or by others.

2) Financial Participation will be required to the extent that Developer's Project contributes to the necessity of such Off-Site Improvement(s) and the costs of said improvements exceeds the amount of the Capacity Charges paid by the Developer to District, in District's sole judgment.

3) Said costs, fees and/or charges shall be paid at the time of application to the District and/or prior to the final inspection and approval by District, and/or as otherwise specified by paragraph 3, herein, and prior to the filing of the final subdivision map.

B. Off-Site Improvements Constructed by Developer. Developer shall design and construct Off-Site Improvements, modifications and/or corrections in accordance with Callayomi County Water District Design Standards and Construction Standards, in effect at the time of construction.

1) Developer shall submit water system improvement plans and specifications prepared by a civil engineer licensed in the State of California to District for District's Design Review and approval.

   a. Submittals for Engineering Plan Check shall be made at the District office.

   b. All improvements shall be in accordance with the Lake County Standard Details and Specifications and the Callayomi County Water District Design Standards and Standard Details.

   c. Design submittals shall include calculations indicating average and peak use, storage requirements and flow requirements including fire flow. Minimum main size shall be 6 inches, with final line sizing to be determined by the District based on a water analysis using the District's water model.

d. The improvement plans shall show water services to each building, if necessary, for any off-site water main.

e. Existing water service laterals shall be abandoned and/or new water laterals shall be constructed in accord with Lake County and District Standards. Meter locations shall be subject to approval by the District.

f. Fire protection shall be in accord with the requirements of Fire Department. With the submittal of the improvement plans, calculations shall be provided to the District and the Fire Department to ensure that adequate water pressures are available to supply hydrant flows and sprinkler flows.

g. The improvement plans shall show fire hydrants installed on new mains at a maximum of 500-foot spacing.

h. All easements for water lines shall be a minimum of 15 ft. All easements shall be shown on the final map. Plan Check Deposit shall be paid at the time of submittal. Call (707) 987-2180 for information.

2) Prior to approval of the improvement plans the applicant shall submit evidence that the appropriate public agency (e.g. Lake County, Caltrans, etc.) has issued encroachment permits for all work within public rights-of-way.

3) Developer shall not commence construction without written approval by District of the proposed water system improvement plans and specifications.

4) Construction of Off-Site Improvements shall be subject to inspection and approval by District-designated personnel.

5) During construction, the following conditions shall apply:

a. All construction shall conform to the District Standard Details and Lake County Standard Specifications and Details, all District Ordinances and the approved plans.

b. The developer shall complete all water improvements, including pressure and bacterial testing prior to connection of any buildings to the District water system.

c. All hydrants shall be covered with bags indicating that the hydrant is not active until flow tests are completed by the District and the hydrants are approved.

d. Prior to final preparation of the subgrade and placement of base materials, all underground water utilities shall be installed and service connections stubbed out behind the sidewalk. Water lines shall be installed in a manner which will not disturb the street pavement, curb, gutter and

sidewalk, when future service connections or extensions are made.

e. If the existing District infrastructure is damaged during construction, the contractor/developer shall be responsible for repair at no cost to the District.

f. If, during construction, the contractor damages any existing facilities on the neighboring properties (i.e. fences, gates, landscaping, walls, etc.) contractor shall be responsible to replace all damaged facilities.

6) Project acceptance is contingent upon submission to District of as-built drawings and other documents (the "As-Built Documentation") acceptable to District as to form and content, as indicated by written approval of same. Developer and District may agree to District preparing, at Developer's expense, some or all of As-Built Documentation.

7) Developer shall reimburse District for District's costs of Design Review, Construction Inspection, and preparation and/or review of Off-Site Improvements As-Built Documentation, before final inspection approval.

8) Developer shall not connect Off-Site Improvements to District's system until District has delivered written notice of acceptance of Developer's Improvements to Developer and any further County final approvals and/or stipulations are met.

9) District will require a Performance Bond and Warranty Bond for all Off-Site Improvement(s) if all such bonds are not required by the County as improvement security as a condition of filing of the final subdivision map.

10) Developer shall post a Performance Bond in the amount of 100% of the construction costs as security for performance and to ensure the eventual completion of said project, or any parts or phases thereof, as a condition of filing of the final Subdivision Map. Said Performance Bond shall be held until said improvements have been completed to the satisfaction of the District.

11) A One-Year Warranty Bond in the amount of 10% of the final construction cost will be required to be held for one year past completion of all phases of the project to protect the District from any defects in materials and workmanship which were not revealed prior to and/or during the final inspection.

12) Off-Site Improvements may include some or all of the water sources, water treatment facilities, mainline extensions, piping, storage, and/or other facilities that the District may determine to be made necessary by Developer's Project.

13) All costs, charges and/or fees due the District related to Off-Site Improvements, whether constructed by District or by Developer, shall be made to the District at the time of application to the District, and/or prior to the final inspection and approval by

District, and/or as otherwise specified by paragraph 3, herein, and prior to the filing of the final map.

14) When Off-Site Improvements are required to be constructed or funded by the Developer which the District finds will potentially serve property other than that of the Developer, the Developer will be entitled to reimbursement in an amount determined by the District Board based on the estimated number of water connections which may, in the future, be made by other property owners to the improvements constructed or financed by the Developer, which have capacity in excess of that necessitated by the present development. Refer to Mainline Extension Agreement and District policies regarding same, as/if applicable.

3. Developer Deposits. Developer may be required to post a deposit with the District (in an amount to be determined) for the Districts costs, charges and/or fees incurred relating to this project. Said deposit will be determined on a case-by-case basis and as further set out in the Projects Will-Serve Letter, Supplementary Conditions and/or Service agreement.

4. Developer Payment. Developer shall pay to District the Capacity Charges applicable to Developer's Project based on characteristics of Project, and the service connection fees for each metered and/or un-metered service, in effect at the time of payment of said fees and/or charges, or Project construction approval by the District, which ever comes later.

5. Easements, Surveys and Deeds. Before final inspection and approval of the Project, all necessary Grants of Easement, descriptions, maps, records-of-survey and/or Grant Deeds relating to or conveying interests in real property for facilities to be turned over to District, including such things as tank sites, well sites, access roads and pipeline rights-of-way, as required by the District to the District for the District's water facilities, and/or pipeline, etc., must be submitted to the District for acceptance by the District's Board of Directors and subsequently recorded with the Lake County Recorder's office.

6. Filing the Final Map. No final subdivision map should be filed or approved for this project until the Community Development Department has received written confirmation from the District that the Developer has completed all tasks, paid all required funds, and/or provided a secured agreement ensuring the completion of the District's requirements.

7. Project Specific. This "Will–Serve Letter" is only pertaining to the specific proposed Project and/or tentative subdivision map, now being considered for said Project, including any time extensions thereof, and that said "Will-Serve Letter" expires simultaneously with the expiration of the subject tentative subdivision map, if same expires prior to being approved and made final.

8. Supplementary Conditions. Any Supplementary Conditions attached to this letter become part of and in addition to the foregoing conditions, as applicable. See attachments for Supplementary Conditions that specifically apply to the Project.

9. As-Built Drawings. The District's Engineer or an engineer approved by the District will produce As-Built drawings and documentation at Developer's expense. The As-Built or

Record, improvement plans shall be on standard size sheets and shall be certified by a Civil Engineer licensed in the State of California and returned to the District Engineer's office prior to final acceptance of the public improvement. These shall show all constructive changes from the original plans including substantial changes in the size, alignment, grades, etc. during construction. The As-Built plans shall document elevations, horizontal locations, and exact type of all installed piping, valves, fittings, and other equipment. Fittings documentation shall include whether push-on, mechanical joint, or flanged, and thrust blocks. The As-Built or Record Plan drawings shall be furnished to the District with copies of the construction photographs. The Contractor shall pay a fee for having the District Engineer put the Record Drawings into the District Water Base Map and hydraulic model. The District will be reimbursed by Developer for the cost of any As-Build Drawings generated by District Engineers prior to the approval of each final subdivision map.

10. Exceptions and Variations. Any exceptions or variances from these conditions will require the written approval of the District.

11. Reservations. The District reserves the right to amend this letter to change or supplement the District's requirements for service when the District receives the project's engineered improvement plan or if the Developer undertakes any substantive modification of the project design. The provisions of this letter do not constitute an express or implied contract.

Should you have any questions regarding this readiness to serve letter, please call (707) 987-2180.

Sincerely,

John Hamner
General Manager

APPENDIX CP

CONSTRUCTION IMPLEMENTATION PLAN

Construction Implementation Plan

The following document details the work that will be completed immediately after the EIR process is completed, but before the individual general contractors begin erecting the commercial and hospitality structures. We refer to this as Phase 1A.

Construction Sequencing Plan

- The commercial aspects schedule includes all resort hotel units and accessory amenities, as well as a few model homes with the residential areas.
- The majority of the resort residential and residential villa development will be revolving and dependent on parcel sales and the market.
- The Development Agreement will authorize the sequential residential development.

1.0 Civil Infrastructure Installation:

The first stage of construction will include the development of roads. The figure below depicts the grading of temporary construction roads.

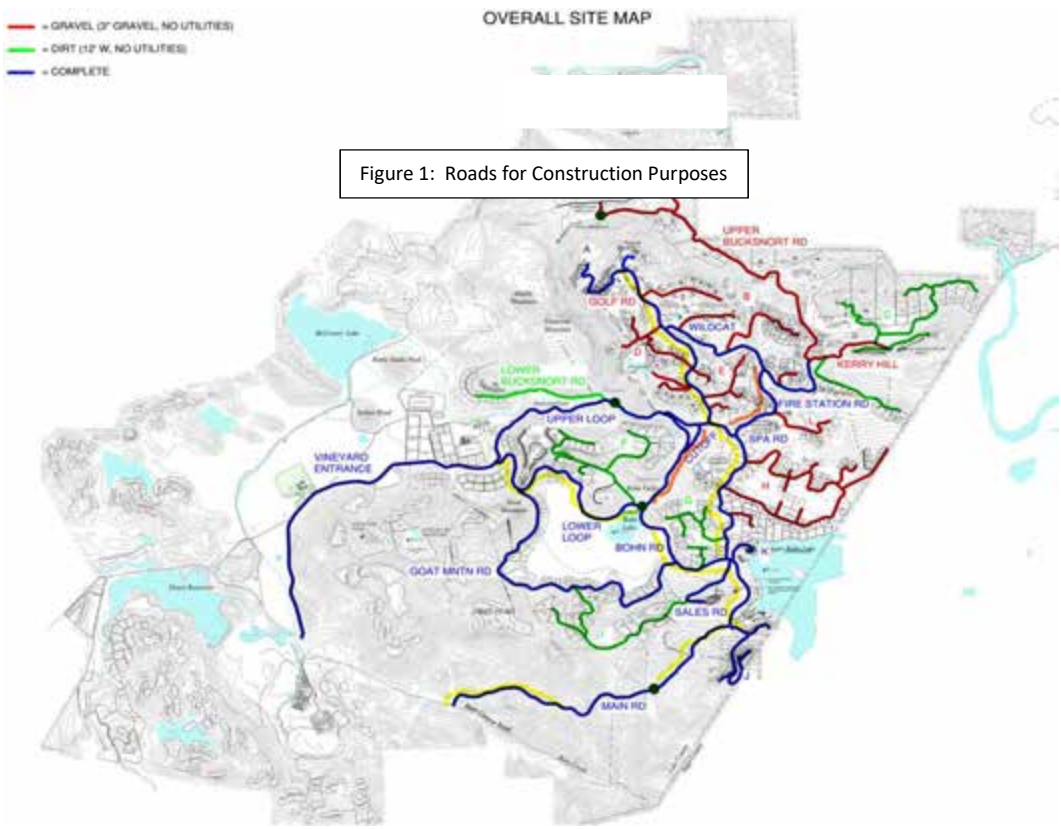

Figure 1: Roads for Construction Purposes

2.0 Site Construction Workforce Plan

2.1 Site Preparation

Construction is proposed to start after the appeals period of the final EIR ends, as early as April 15, 2020. Construction will mobilize with several different dedicated crews to perform the work necessary for the installation of access roads leading to the cluster construction sites.

- 9 Dirt Crews with 8 workers per crew, for an approximate total of 72 site contractors, dedicated to cutting and grading roads, installing sub-base and widening existing roadways where necessary.

    - Upper Loop Road – 2 weeks of work
    - Lower Loop Road
    - Main Entrance – 2 crews, one working from Butts Canyon north and another from the Farmstead Area South
    - New Road from Bohn Lake to the Sales Center
    - Minor Roads and Pads at the Farmstead Village
    - Minor Roads, removing undergrowth and cutting rough contours for the Golf Course Area
    - Minor Roads, grading field and paddock areas and cutting building pads at the Equestrian and Polo Center

- 2 Crews with 8 workers per crew, for an approximate total of 16 workers, dedicated to the preparation and installation of bridges and retaining walls.
- 3 Crew with 8 men per crew, for an approximate total of 24 workers, dedicated to the installation of sub-grade utilities
- 1 Crew with 6 men, dedicated to the on-site rock crushing facility
- 6 Engineers/Project Managers
- The operation will assume normal working hours of 6:00am to 6:00pm, however at times of schedule driven need, the operation work continuously.
- TOTAL: 4 separate crews for a total of 124 site construction personnel

2.2 Rock Crushing Operation:

- The rock crushing operation will continue at the location of the current rock crushing operation currently enclosed as Figure 2 (PLEASE CONFIRM)
- The existing operation will remain at the existing site and will cover approximately 20 acres.
- The produced aggregate and sand will be stored at this site, as well as trucked to the Golf Course and the Equestrian and Polo Center where it will be stock piled for Project use at the site of the future Polo Fields 3, 4 & 5. The aggregate for road base will be dispersed as needed for roadways, while the aggregate to be used for future concrete will be trucked to an on-site concrete batch plant for concrete.
- There will be one diesel powered rock crusher dedicated to producing aggregate rock to be used on site for road base.
- There will be a second diesel powered rock crusher that will be dedicated to producing aggregate for concrete to be used on site, as well as sand to be used on site, primarily at the Golf Course.

2.2.1 Aggregate Wash System:

- Aggregate used for concrete and sand will be washed.
- A new containment pit will be excavated adjacent to the crusher
- The "washing water" will continue the existing operations, which include an existing pit to recycle the wash water. The pit utilizes water that is trucked to the site from an existing well.
  After the water is washed over the aggregate or sand, it will be reclaimed into the adjacent pond, reclaimed and re-used for the wash operation.

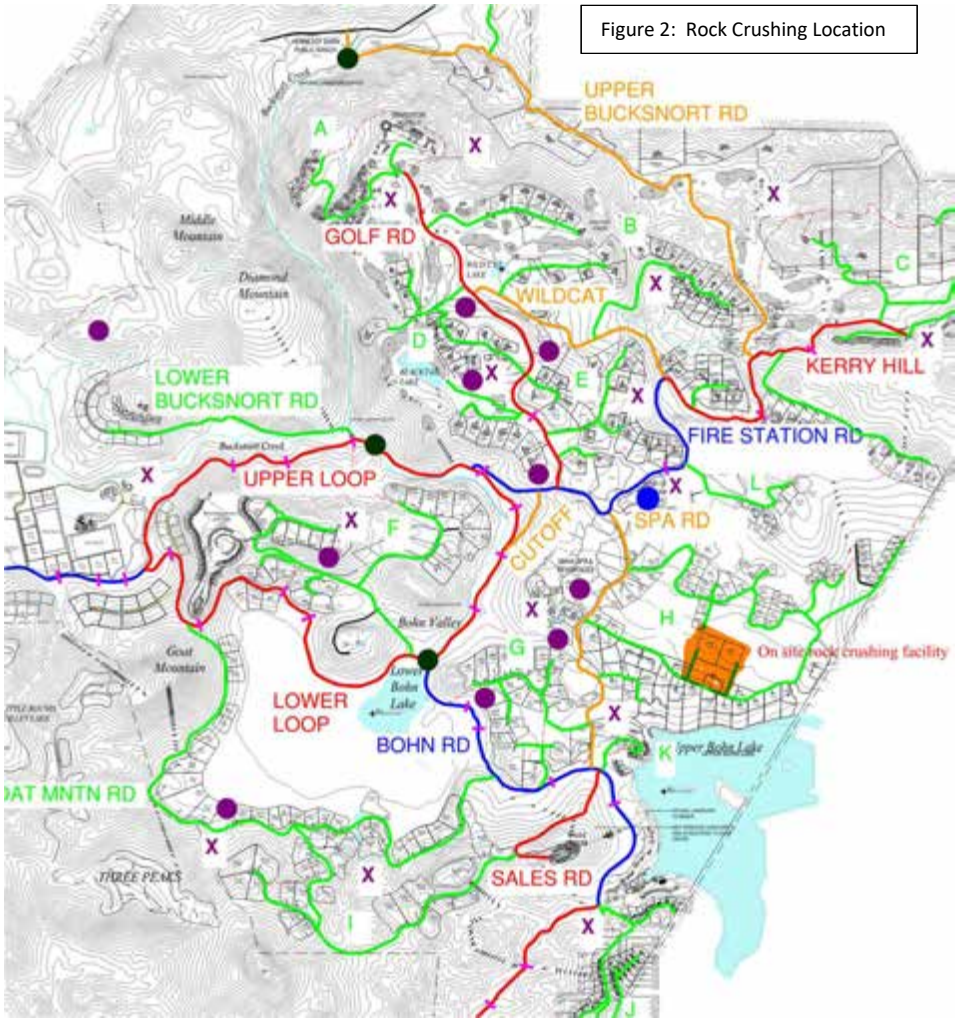

Figure 2: Rock Crushing Location

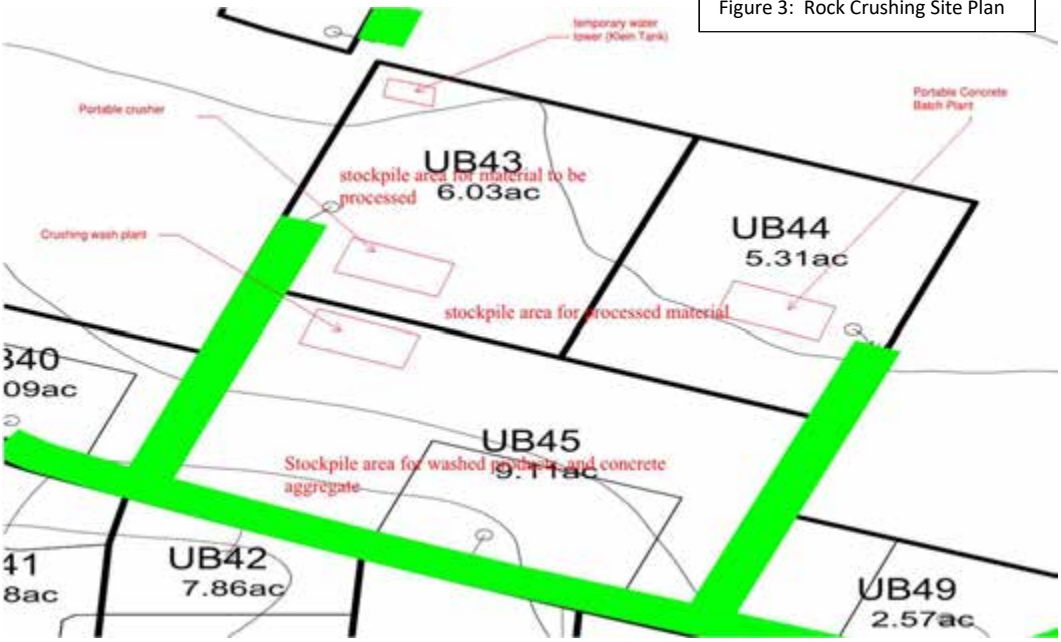
2.2.2 Rock Crushing Operational Details

- The rock crushing operation will begin approximately in April 2020 and continue until April 2023

- The operation will assume normal working hours of 6:00am to 6:00pm, however at times of schedule driven need, the operation may work continuously.
- The power for the operation will be delivered from a new temporary drop from an existing PG&E power pole adjacent to the site.
- The crushing machines are self-contained diesel powered machines.
- There will be required OSHA safety signage and perimeter lighting.

Figure 3: Rock Crushing Site Plan



3.0 General Contractor Sequencing Plan

- It is anticipated that as many as seven general contractors may be present and operational at the same time at multiple locations throughout the site.
- Receive applicable permits from responsible agencies.
- Notify the Regional Water Quality Control North Coast Region #1 (707) 576-2220 at least 3 days prior to beginning land disturbance
- Installation of construction entrance(s)
- Installation of perimeter controls (e.g. silt fence)
- Site Contractor will grade and clear the building construction area. After initial grading, site contractor will grade and compact each of the building pads. Installation of basins/traps/wattle per the approved SWPPP requirements; areas draining to these structures cannot be disturbed until the structures and permanent drainage associated with these structures are completely installed.
- The delivery and establishment of temporary jobsite power
- Each cluster will designate an area for temporary jobsite mobile storage containers, offices, and mobile toilets Each area will be located within areas previously reviewed for future development.
- The contractor will designate a location within their construction staging area where dumpsters for landfill and recycled waste will be located, within areas for future development

- Temporary lighting will be installed as needed for security within the construction site.

4.0 Construction Workforce Employee Estimation:

- Phase 1A includes construction of the commercial and resort amenities within the five different clusters. It is estimated that each cluster will have approximately 150 workers, for up to 750 workers on the total Project Site.
- The highest concentration of employees on site for phase 1A is estimated to occur between September 2020 and September 2022.
- The project is divided into Phase 1A, 1B and 1C. Market conditions and the absorption rate of residential lot sales will impact the construction commencement dates of phases 1B and 1C. Depending upon the success in attracting sales and ownership, the construction of Phase 1B and 1C will continue from 2023-2030.

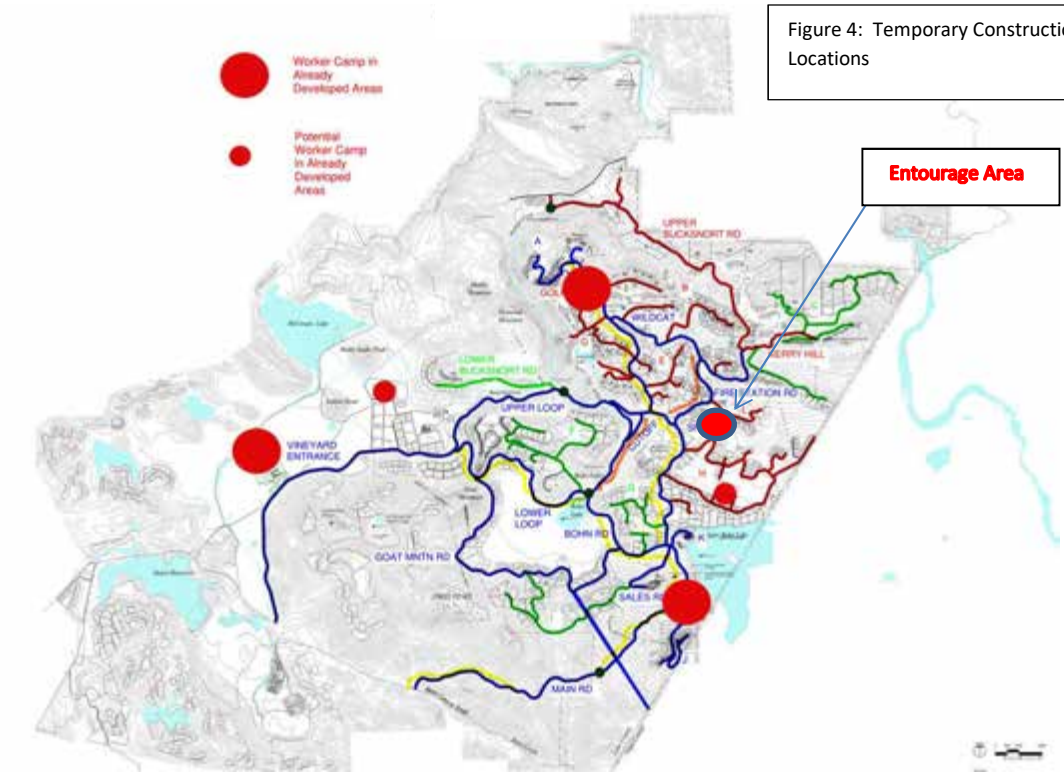


Figure 4: Temporary Construction Camp Locations

5.0 Construction Worker Housing Quantity Needs and Layout:

5.1 For the first two years it is anticipated that the site & general contactors expect to employ a maximum of 750 construction workers. To the extend feasible, it is anticipated that the construction will

rely on the local workforce, allowing our projections to anticipate 50% of the contactors to be from the area. In which case approximately 375 employees will stay onsite in temporary workforce housing.

- It is anticipated that the Civil site contractor Installation will employ approximately 132 crew members. It is anticipated that half of these employees will stay on site and sleep in modular housing or camper trailers. The other half of the employees, if they live near by the construction site, will return to their homes nightly.
- The work operation is anticipated to be a 10 hour days 6 days a week.
- Where needed during potential night work, site lighting will be utilized in order to maintain a safe worksite operation.
- All SWPPP protocols will be adhered to.
- There will be an Owner employed SWPPP oversite organization employed to monitor adherence to regulations.
- It is anticipated that the General Contractors hired to build the hospitality components of the development, will employ approximately 375-650 crew members, at any given time. It is anticipated that over half of these employees will stay on site and sleep in modular housing or camper trailers. The remainder of the employees, if they live near by the construction site, will return to their homes nightly.
- A system of rolling start times may be implemented during periods when high numbers of construction crews are working on the development site. Although all employees will be encouraged to reside in one of the modular or portable housing options, the impact of cars entering and leaving the site will be mitigated by rolling start and stop times.

5.2 On site workforce housing will consist of temporary trailers on wheels or temporary foundations, within previously dedicated development areas.

5.3 Water

5.4 Electrical

5.5 Temporary Sewer

5.6 Safety & Security

6.0 Workforce traffic circulation plan:

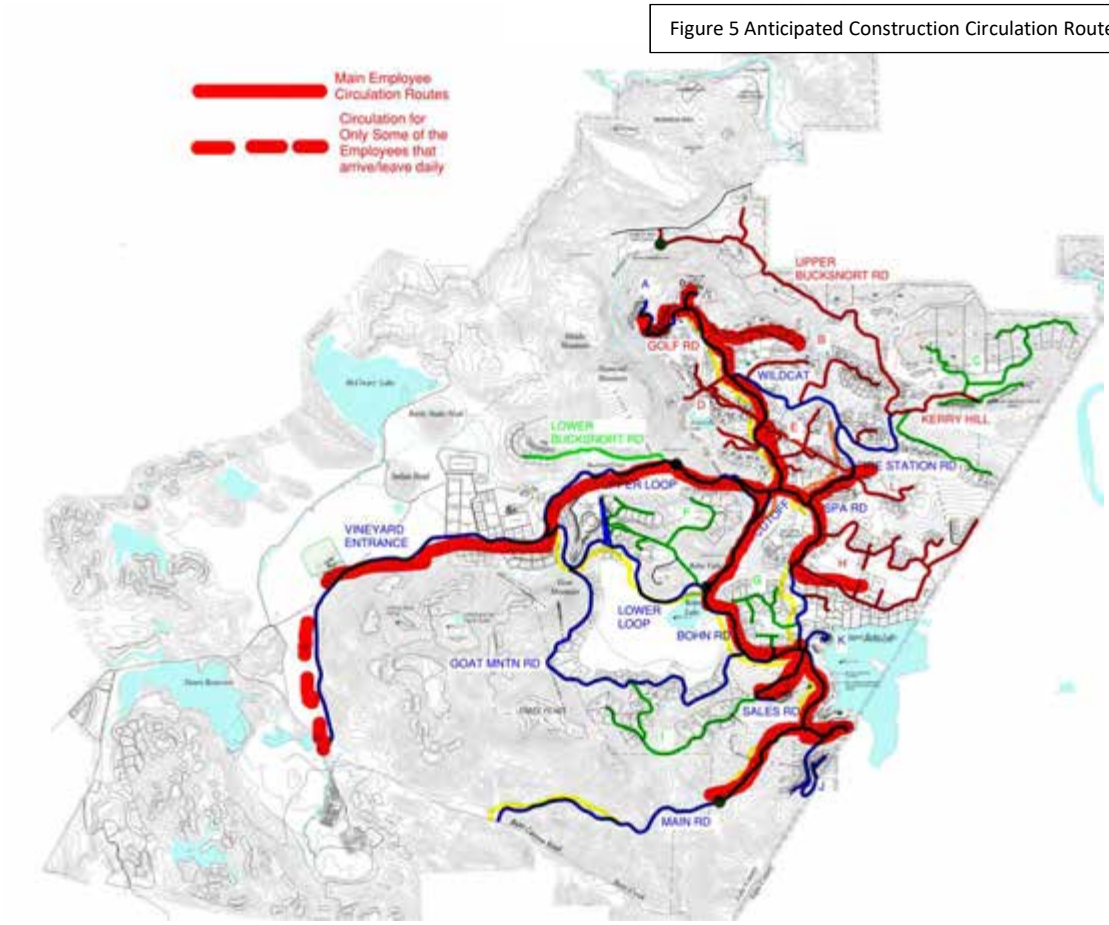
6.1 All contractors using their own car will enter through a central location at the Back of House. A system of rolling start times may be implemented during periods when high numbers of construction crews are working on the development site.

6.2 There will be a team of traffic flag operators both at the Back of House Operations Center and at the Intersection of the Vineyard Entrance Road and Butts Canyon Road.

6.3 As construction trucks leave either the Vineyard Entrance Road there will be procedures implemented for truck tire dirt containment.

6.4 During periods of construction vehicle impact, the new Main Entrance Road may be continually sprayed, as to contain dust and debris.

Figure 5 Anticipated Construction Circulation Route



7.0 Site Lighting and Power:

- Depending upon the location and needs of the site, and to the extent that technology allows feasibility, solar generators will be used. In addition, diesel powered small, medium and large generators as well as temporary connections to existing PG&E power poles will be utilized. All Air Quality Management Permits will be applied for and obtained prior to construction start dates.
- During the construction phase 1A, beginning in 2020 until September of 2023, there will be temporary down light construction lighting for safety and security in various areas. Road intersections may be illuminated by over-head lighting. The worker construction camps may be lit by over-head pole lighting, string lighting, ground lighting and/or lighting on the modular structures.
- In areas of night time operations, temporary construction lighting will be utilized, either from the ground or elevated on poles.
- Security lighting may be utilized at locations of stored materials to ensure against theft.

8.0 Construction Water, Potable Water, Waste Water and Portable Sanitary Facilities:

8.1 Depending upon the location and needs of the site, non potable water will be used during the construction of roads, for dust mitigation and for potable drinking water.

8.2 In certain instances, potable drinking water may be delivered to certain areas of the site by truck for drinking purposes

8.3 There will be portable toilets located at various locations throughout the areas of construction on the site. These facilities will be regularly maintained, and the resulting effluence will be trucked from the site and treated at an appropriate waste treatment facility located off of the site.

9.0 Access Restrictions and Site Security:

9.1 Employee safety is a priority to the MAHA group. There will be a security check point installed on the Vineyard Entrance Road, between the Back of House Operation/Construction Camp Location and the future Equestrian Center. There may be a secondary security check point installed, as necessary on the Vineyard Entrance Road before the Back of House Operation Location.

9.2 When the Main Entrance onto Butts Canyon Road becomes passable or operational, an additional security check point will be installed and will remain operational until the installation of the permanent Entry and Checkpoint are operational.

9.3 All contractor employees will only permitted on site after successful completion of an OCIP safety and procedural course.

9.4 All contractor employees will be required to complete a background evaluation.

9.5 All contractor employees will be required to obtain, carry and display digital badge technology and present these in order to pass any security check points on the site.

10.0 Parking arrangements:

Contractors, Engineers, Inspectors and their employees are being encouraged to house their out of town employees in the construction camps that will be available. There will be employee parking located adjacent to the employee camps. Employees will be encouraged to consolidate vehicles and to carpool. Employees will be shuttled throughout the site by trucks.

11.0 Removal of debris and materials off site

- California law requires businesses and other public entities to recycle as much of the waste they generate as possible. Best practices will be employed as far as may be practical when dealing with organic materials generated on site, in the effort to retain and compost on site. However, there will be instances where organic material may need to be removed from the site and transported to a commercial green recycling center.
- To the extent feasibly possible, all construction debris will be sorted and disposed of, resulting in the majority recycled by C&S Waste Solutions, who services Lake County.

12.0 Material delivery, storage and security

- The initial point of delivery for construction materials will be the Back of House/Construction Operation.
- Items to be stored will be offloaded at this location and stored in secure warehouse accommodations at this site. Larger delivery items such as pre-fabricated building components, lumber and drywall deliveries will be trucked directly on MAHA roads to the building erection location.
- General Contractors will be encouraged to supply and secure modular storage facilities at each of the building sites.
- Traffic dependent, some larger deliveries of materials to the site may occur outside of the normal 6:00am to 6:00pm time frame.
- Hazardous materials, such as gasoline, diesel and propane will be delivered to the various construction building sites, by licensed operators fully in accordance with both California and Lake County regulations.

13.0 Fire and Emergency Plan

- The Standard Operating Procedure for Fire Prevention and Protection will be in place before construction starts, and will be approved by Cal Fire.
- The Emergency Plan and Procedures will be provided to every contracting firm before they will be allowed to enter the site.
  A temporary map will be provided for all contractors entering the site.

RE: Guenoc Valley Mixed-Use Planned Development

Dear Ms. DelValle:

Thank you for your project notification letter dated, April 23, 2019, regarding cultural information on or near the proposed Guenoc Valley Mixed-Use Planned Development, Lake County. We appreciate your effort to contact us.

The Cultural Resources Department has reviewed the project and concluded that it is not within the aboriginal territories of the Yocha Dehe Wintun Nation. Therefore, we respectively decline any comment on this project. However based on the information provided, please defer correspondence to the following:

Subject: Notice of Preperation of an Environmental Impact Report for the proposed Guenoc Valley Mixed-Use Planned Development Project
MTR THPD File No. 19-04-023

Dear Ms. DelValle:

The Middletown Rancheria ("Tribe") is in receipt of your notification dated April 23, 2019 regarding the above referenced matter. The Project site and its surrounding landscape have since time immemorial been considered a site of cultural, historical, and religious significance for the Tribe. The Tribe is aware of and concerned about significant cultural and sacred resources that, while known to the Tribe, may not be properly identified through record and survey searches. Moreover, the potential for cumulative impacts to tribal cultural resources must be adequately assessed.

Due to the high likelihood of disturbing tribal cultural resources which include, but is not limited to, Native American human remains, funerary objects, items or artifacts, sites, features, places, landscapes or objects with cultural values to the Tribe, during the Project, the Middletown Rancheria is requesting to be an active participant in all aspects of the Project and development of the Environmental Impact Report (EIR).

We request that all notices and documents be mailed or personally delivered to the Tribe with an electronic copy provided, as early as possible to allow the Tribe adequate time to provide information and to facilitate meaningful consultation to ensure protection and mitigation of tribal cultural resources.

This correspondence is without prejudice to any rights and remedies of the Tribe, all of which are expressly reserved.

We appreciate your time and consideration on this matter. Please contact as soon as possible to discuss next steps.

Thank you.

Larry Longee, Jr.

TRIBAL CONSULTATION REQUEST
SB-18 & AB-52

Dear Tribal Representative:

The Lake County (County) Community Development Department has received a project application for the Guenoc Valley Mixed-Use Planned Development Project (Proposed Project) and is initiating contact with Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the project area pursuant to the statutory requirements of Senate Bill 18 (SB 18), Assembly Bill 52 (AB 52) (Chapter 532, Statutes of 2014), and Section 21080.3.1 of the California Public Resources Code (PRC). We are hereby notifying you of an opportunity to consult with the County regarding the potential for the Proposed Project to impact Tribal Cultural Resources, as defined in Section 21074 of the PRC. The purposes of tribal consultation under AB 52 are to determine, as part of the CEQA review process, whether or not Tribal Cultural Resources are present within the project area, and if so, whether or not those resources will be significantly impacted by the project. If Tribal Cultural Resources may be significantly impacted, then consultation will also help to determine the most appropriate way to avoid or mitigate those impacts. Additionally, SB 18 requires that, prior to adopting an amendment to the general plan, the County must consult with Native American tribes with respect to the possible preservation of, or the mitigation of impacts to, Native American places, features, and objects.

Below please find a description of the Proposed Project, a map showing the project location, and the name of our project point of contact, pursuant to PRC § 21080.3.1 (d). The information provided on this form is general and summary in nature. Please review the additional information included with this emailing, including the Notice of Preparation of the Environmental Impact Report for the Proposed Project, and contact the Department or the project planner for more detail if needed.

While PRC § 21080.3.1 (b)allows Native American tribes 30 days from the receipt of a notification letter to request consultation with the County related to impacts to Tribal Cultural Resources resulting the Proposed Project, SB-18 allows 90 days to request consultation for projects that will amend the General Plan. **The County requests that responses for consultation requests under both SB18 and AB52 be received within 90 days of receipt of this letter.**

REQUEST: The Applicant has requested the following entitlements and approvals from the County associated with the Proposed Project:

- Amendment to the General Plan and Special Study Area map of the Middletown Area Plan to include the area commonly known as the college parcels (GPAP 18-01)
- Zoning Ordinance Amendment to introduce a new zoning district to allow for future uses, Guenoc Valley District ("GVD"), to implement the goals of the Special Study Area, and subsequently rezoning of the Project Site from Rural Lands, Agriculture, Rural Residential, and an Agricultural Protection Zone to GVD (AM 18-04; RZ 18-01)
- Use Permit for the Specific Plan of Development (Master Development Plan) for the first phase (UP 18-01)
- Tentative Subdivision Maps for the first phase (SD 18-01)
- General Plan of Development (GPD 18-01)

- Development Agreement (DA 18-01)Environmental Impact Report (EIR 18-01);
- Grading permit for Installation of water line; and
- Tentative Subdivision Map for off-site workforce housing.

APPLICANT: Lotusland Investment Holdings, Inc.
One Embarcadero Center Suite 730
San Francisco, CA 94111

LOCATION: The **Guenoc Valley Ranch property (Project Site)** is located in southeast Lake County and is approximately bounded by Long Valley and Coyote Valley to the west, a U.S. Coast Guard LORAN station military reservation to the northwest, the Cedar Mountains to the north, the Lake County limits to the east. The Project Site is located approximately three miles east of State Route (SR) 29 and 13 miles west of SR 16. Butts Canyon Road bisects the southern portion of the Project Site. The **Off-site Workforce Housing Site** is located at 21000 Santa Clara Road in Middletown.

APNs: **Project Site:** 013-015-28, -29; 013-016-04, -05, -06, -08; 013-019-05, -09; 013-021-05, -06, -09, -10; 013-022-01, -02, -05, -08, -09, -11, -12, -13, -15, -14; 013-023-06, -07, -09, -10, -11, -12, -13, -14, -15; 013-024-10, -12, -28, -29, -30, -33, -34; 013-053-01; 014-004-25; 014-310-06, -07, -08, -09; 014-320-06, -08; 014-330-08, -09; 014-340-04. **Off-site Workforce Housing Site:** 014-380-09.

ZONING: CURRENT:
Project Site: Agriculture (A), Rural Lands (RL), and Rural Residential (RR). **Off-site Workforce Housing Site:** Single Family Residential (R1).

PROPOSED:
Project Site: Guenoc Valley District (GVD). **Off-site Workforce Housing Site:** Single Family Residential (R1).

PARCEL SIZE: **Project Site:** All 49 parcels combined equal approximately 16,000 acres. **Off- site Workforce Housing Site:** Approximately 12.75 acres.

EXISTING ACCESS: **Project Site:** Access is provided by SR 29 via Butts Canyon Road to the northwest. Six access points exist along Butts Canyon Road as it transects the Project Site. **Off-site Workforce Housing Site:** Access to the site is provided by Highway 175 via Santa Clara Road.

PROPOSAL: The Proposed Project consists of the development of a master planned mixed-use resort and residential community within the 16,000-acre Guenoc Valley Ranch property (Project Site) in southeast Lake County, off-site workforce co-housing (Off-site Workforce Housing) located in central Middletown (Off-Site Housing Site), and construction of a water supply line (Pipeline) along Butts Canyon Road to the Project Site. Proposed Project components are described in the Notice of Preparation and summarized below.

Proposed land uses for the Project Site include a destination luxury resort, consisting of five hotels, resort residential uses, single family residential villas/estates, and recreational facilities, as well as commercial centers (i.e. the Maha Farm Cluster), modified agricultural production and grazing, and associated supporting infrastructure. Proposed outdoor recreational and resort amenities include two wineries, a wellness center and spa, golf course, equestrian facilities, polo grounds, and wilderness camp. At full build out, the Proposed Project would include up to 400 hotel rooms, 450 resort residential units, 1,400 residential estates, and up to 500 workforce co-housing units. Workforce housing is anticipated to be primarily co-

living housing structures built-in single-family style residency with potential accessory dwelling units. On-site workforce housing would consist of 35 housing structures capable of accommodating approximately 100 workers and will be located on the west side of Butts Canyon Road. Off-site Workforce Housing would consist of 50 housing structures capable of accommodating up to 221 workers on the Off-Site Workforce Housing Site in Middletown. The project also includes the development of support facilities, including a centralized back of house facility, an emergency response center including a fire station, and water supply and wastewater treatment systems. Other undeveloped areas of the Project Site will also continue to be rural lands and will remain in managed grazing which is an integral part of the fire management plan being developed for the site along with an on-site fire station. The Proposed Project does not anticipate expansion of the existing vineyards within the Project Site.

Potable water supply would be provided to the Proposed Project via multiple deep water supply wells located throughout the Project Site and potentially on a nearby property owned by the Applicant northeast of the intersection of State Route 29 and Butts Canyon Road. Wastewater would be collected via a sanitary sewer collection systems and treated on site. Treated wastewater would be distributed and reused on site primarily for landscaping and irrigation to reduce overall project water demand.

Project components would be developed in phases: The first phase would be constructed in the near-term (approximately the next ten years), while future phases would be built out based on market demands after the first phase is complete.

Subject: SB-18 & AB-52 Tribal Consultation - Guenoc Valley Mixed Use Planned Development
Importance: High

Dear Tribal Representative:

The Lake County (County) Community Development Department has received a project application for the Guenoc Valley Mixed-Use Planned Development Project (Proposed Project) and is initiating contact with Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the project area pursuant to the statutory requirements of Senate Bill 18 (SB 18), Assembly Bill 52 (AB 52) (Chapter 532, Statutes of 2014), and Section 21080.3.1 of the California Public Resources Code (PRC). We are hereby notifying you of an opportunity to consult with the County regarding the potential for the Proposed Project to impact Tribal Cultural Resources, as defined in Section 21074 of the PRC. The purposes of tribal consultation under AB 52 are to determine, as part of the CEQA review process, whether or not Tribal Cultural Resources are present within the project area, and if so, whether or not those resources will be significantly impacted by the project. If Tribal Cultural Resources may be significantly impacted, then consultation will also help to determine the most appropriate way to avoid or mitigate those impacts. Additionally, SB 18 requires that, prior to adopting an amendment to the general plan, the County must consult with Native American tribes with respect to the possible preservation of, or the mitigation of impacts to, Native American places, features, and objects.

Below please find a description of the Proposed Project, a map showing the project location, and the name of our project point of contact, pursuant to PRC § 21080.3.1 (d). The information provided on this form is general and summary in nature. Please review the additional information included with this emailing, including the Notice of Preparation of the Environmental Impact Report for the Proposed Project, and contact the Department or the project planner for more detail if needed.

While PRC § 21080.3.1 (b)allows Native American tribes 30 days from the receipt of a notification letter to request consultation with the County related to impacts to Tribal Cultural Resources resulting the Proposed Project, SB-18 allows 90 days to request consultation for projects that will amend the General Plan. **The County requests that responses for consultation requests under both SB18 and AB52 be received within 90 days of receipt of this letter.**

Please refer to the above attachment for further information. If you have any questions, please let me know.

Sincerely,

Mark Roberts – Principal Planner

Subject: SB-18 & AB-52 Tribal Consultation - Guenoc Valley Mixed Use Planned Development
Importance: High

Dear Tribal Representative:

The Lake County (County) Community Development Department has received a project application for the Guenoc Valley Mixed-Use Planned Development Project (Proposed Project) and is initiating contact with Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the project area pursuant to the statutory requirements of Senate Bill 18 (SB 18), Assembly Bill 52 (AB 52) (Chapter 532, Statutes of 2014), and Section 21080.3.1 of the California Public Resources Code (PRC). We are hereby notifying you of an opportunity to consult with the County regarding the potential for the Proposed Project to impact Tribal Cultural Resources, as defined in Section 21074 of the PRC. The purposes of tribal consultation under AB 52 are to determine, as part of the CEQA review process, whether or not Tribal Cultural Resources are present within the project area, and if so, whether or not those resources will be significantly impacted by the project. If Tribal Cultural Resources may be significantly impacted, then consultation will also help to determine the most appropriate way to avoid or mitigate those impacts. Additionally, SB 18 requires that, prior to adopting an amendment to the general plan, the County must consult with Native American tribes with respect to the possible preservation of, or the mitigation of impacts to, Native American places, features, and objects.

Below please find a description of the Proposed Project, a map showing the project location, and the name of our project point of contact, pursuant to PRC § 21080.3.1 (d). The information provided on this form is general and summary in nature. Please review the additional information included with this emailing, including the Notice of Preparation of the Environmental Impact Report for the Proposed Project, and contact the Department or the project planner for more detail if needed.

While PRC § 21080.3.1 (b)allows Native American tribes 30 days from the receipt of a notification letter to request consultation with the County related to impacts to Tribal Cultural Resources resulting the Proposed Project, SB-18 allows 90 days to request consultation for projects that will amend the General Plan. **The County requests that responses for consultation requests under both SB18 and AB52 be received within 90 days of receipt of this letter.**

Please refer to the above attachment for further information. If you have any questions, please let me know.

Sincerely,

Mark Roberts – Principal Planner

RE: Guenoc Valley Mixed Use Planned Development

Dear Mr. Roberts:

Thank you for your project notification letter dated, December 18, 2019, regarding cultural information on or near the proposed Guenoc Valley Mixed Use Planned Development, Lake County. We appreciate your effort to contact us.

The Cultural Resources Department has reviewed the project and concluded that it is not within the aboriginal territories of the Yocha Dehe Wintun Nation. Therefore, we respectively decline any comment on this project. However, based on the information provided, please defer correspondence to the following:

Middletown Rancheria
Attn: THPO
PO Box 1035
Middletown, CA 95461

Please refer to identification number YD–12182019-02 in any future correspondence with Yocha Dehe Wintun Nation concerning this project.

Thank you for providing us with this notice and the opportunity to comment.

Sincerely,

Isaac Bojorquez
Director of Cultural Resources

SECTION 1 INTRODUCTION

1.1 Context & History

The vision for the Maha Resort at Guenoc Valley ("Resort") is that of a destination resort of unparalleled luxury, featuring internationally acclaimed architect-designed boutique hotels with products and amenities from local artisans and farms, providing a luxurious experience within the scope of a master-planned mixed-use development.

The new zoning designation, Guenoc Valley District ("GVD"), includes proposed development standards outlined in the draft zoning ordinance section. These are consistent with the County's existing Commercial and Residential Planned Development zoning designations as requested by the Area Plan. The proposed Entitlements utilize the Planned Development process for the long-term growth of the Resort. This recognizes efficient land utilization and preservation of open space in conjunction with fire- safe measures already required by the State and County Fire Safe Regulations. It also includes measures that the Resort proposes in the Maha Guenoc Valley Wildfire Prevention Plan.

The Resort adheres to the framework of the existing Lake County land use policies and goals as defined by the General Plan and more importantly the specific plan for this area as defined by the Middletown Area Plan ("Area Plan"). As directed by the Area Plan, the Guenoc Ranch will be rezoned to accommodate planned resort development. The planned development will be designed as mixed-use, comprising resort, resort commercial, residential, and agriculture as previously anticipated in the Area Plan.

Maha reflects the area's local stewardship, historic retreat culture and longstanding agricultural traditions. The proposed development features low-impact development as one tool to preserve the legacy and identity of the ranch for future generations. The master plan will incorporate land management practices that support open space preservation with an integrative animal husbandry and diversified agriculture element along with fuel reduction management.

1.2 Design Philosophy & Objectives

These Design Guidelines provide a set of criteria to evaluate the appropriateness of proposed development in relation to the vision, intent, and purpose of the GVD area to support the blend of resort, recreational, residential, and agricultural planned development.

The goal of these Design Guidelines is to help ensure the continuation of the vision and intent of the Special Study Area NO. 3 of the Middletown Area Plan through the implementation of the GVD.

The vision for the GVD is grounded in high-quality design that exists in harmony with the natural environment of the diverse landscape of the Guenoc Valley and surrounding landscape. The concept of "listening to the land" dictated and resulted in the creation of an exclusive and innovative low-impact development connected to nature. The vision prioritizes the character of the site through landscaping, invisible infrastructure where feasible, and the design of individual architectural clusters that respond to the variety of the landscape visually and topographically.

Visiting or living within the GVD is about being connected to nature and its immense offerings through outdoor recreation, authentic farmstead experiences such as farm-to-table dining, high end wine tastings, spa and wellness treatments, and luxury front-end service and amenities. It is the intention to attract guests and visitors to Lake County who are moved by, motivated by, and appreciative of the character of the environment. Development within the GVD shall abide by the vision of preserving the character of the landscape for both the present and future enjoyment of guests and owners.

1.3 Purpose & Intent

The following includes a series of guidelines which preserve the existing visual characteristics of the GVD and promote appropriate change and development. The focus of the these Design Guidelines outline both the architectural and landscape expectations for future development within the GVD. These guidelines respond to and support the local land use policies such as the General Plan, The Middletown Area Plan, and specifically the GVD Zoning Ordinance ("Governing Documents").

The existing, as approved, Commercial Design Guidelines that govern the Middletown Area Plan recognize the importance of development in creating positive initial impressions and increase community pride and economic viability. However, they do not apply to the Special Study Area that includes the GVD. Therefore, as part of the GVD approval process the following are the proposed Design Guidelines for the GVD zoning district.

To fulfill the vision of a world-renowned brand offering a luxurious experience in an iconic natural setting demands uncompromising excellence in all regards. This extends into all design and planning, including plans for construction, operations, and maintenance. The Design Guidelines are one such method utilized to ensure the preservation of character, quality, and vision.

These Guidelines will be the reference document to guide the design of proposed future Specific Plan of Developments (SPOD), future residential development, which is located within the area of the GVD, and general planned development design characteristics.

1.4 Landscape & Development Zones

Refer to the SPOD application for the different existing and proposed landscape zones and development philosophies.

1.5 Definitions

American with Disabilities Act (ADA): Federal act prohibiting discrimination against persons with disabilities; in relation to the project, this act most often applies to the guarantee of accessible areas and structures.

Covenants, Conditions, & Restrictions (CC&Rs): An additional legal document applying a set of rules, responsibilities, and rights to each residential parcel.

Designated Open Space: Open space area protected from any development for the purposes of preserving wildlife corridors and rural landscapes; the only development allowed within this area is cross-over roadways, trailways, and small accessory structures.

Design Guidelines: The design guidelines and other provisions set forth in this document.

Emergency Vehicle Accessway: A route that provides access specifically for emergency personal and first responders.

Governing Documents: Existing documents that dictate the allowance and intention of development as it relates to the short- and long-term development goals. Conformance with the governing documents is disclosed in both the general and specific plans of development.

Guenoc Valley District (GVD): Section XXX of County of Lake Zoning Ordinance, a district comprising of 16,000 acres within the Guenoc Valley Planned Development Area.

Master Association: The association of owners governing the Resort.

Resort: Maha Resort at Guenoc Valley as described in Section 1.1 and throughout these Design Guidelines.

Public Viewshed: Parts of the site viewable from public roadways or public viewsheds.

Residential Accessory Use: A use conducted upon the same lot or parcel as the principal use or structure to which it is accessory. The use shall be customary, incidental, appropriate and subordinate to the use of the principal building on such lot or parcel; and uses accessory to principal residential uses permitted without first obtaining a use permit shall be activated with, or subsequent to the construction of the principal structure or activation of the principal use. Uses accessory to principal uses permitted by use permit shall be activated with, or subsequent to the construction of the principal structure or activation of the principal use only if authorized by the permit and, in such case, the addition of such accessory uses shall require either an amendment to the permit authorizing the principal use or a separate use permit.

Resort Rental Program: Voluntary rental program associated with transient occupancy.

Resort Residential Parcels: Parcels with residential structures within a primary resort community; the architectural style of these residential structures will align with the Resort community's design. These may be attached or detached units with kitchens; fractional or whole ownership. These parcels can be entered into the Resort Rental Program.

Rural Landscapes: Non-developed areas during the first phase of development; area may be developed during future phases of development.

Special Event: An establishment or enterprise involving large assemblages of people or

automobiles on private land not specifically designed for such events, including but not limited to spectator sport events, outdoor concert, wedding, etc.

Specific Plan of Development (SPOD): Application requirement for planned developments within the County of Lake, that are in substantial conformity with the previously approved general plan of development as well as any other governing documents.

Villa Residential Parcels: Larger parcels for sale within a primary resort community; owners will choose from typical floor plans associated with the resort community's architectural style. Whole ownership units intended for sale that may be a part of the Resort Rental Program.

SECTION 2 OPEN SPACE & AGRICULTURAL GUIDELINES

2.1 Existing Landscape Context

The Resort is situated in a unique northern California landscape. The site's hills and valleys filled with oak woodlands, grasslands, vineyards, and grazing pastures will create an exceptional visitor and resident experience. The dramatic terrain—ranging from large fields and wetlands to steep and rocky hillsides—offers a variety of experiences and impressive views. A series of lakes, ponds, and reservoirs are filled by a site-wide network of streams and creeks. Over the years, a majority of the site has come to be used for a variety of agricultural operations, which includes a large cattle grazing operation; a portion of the site is also currently leased for vineyards. The site is set within a Mediterranean climate, defined by cool and rainy winters (30 - 60 degrees Fahrenheit) and hot and dry summers (50 - 90 degrees Fahrenheit).

2.2 Open Space

A majority of the Resort will remain as undeveloped natural and agricultural landscapes. These areas outside of parcels and development will provide an essential and unique experience and viewshed for residents and visitors. In addition, dedicated open space will be subject to long term conservation restrictions to prohibit development.

2.2.1 Rural Landscapes

The primary activities and development within rural landscapes will include hiking and walking trails, accessory structures (i.e. utility facilities and hiking stations), ecological restoration and enhancement, and landscape fire reduction management through grazing and manual vegetation removal (see *Maha Guenoc Valley Wildfire Prevention Plan* and 2.3.1).

2.2.2 Dedicated Open Space

The dedicated open space will be permanently protected from any future development for the purposes of maintaining a highly rich biological environment and protecting key wildlife corridors. Within this area, development will be limited to recreational amenities and features such as

pathways and hiking trails (see 3.3), signage (see 3.4.2), lighting (see 3.4.3) and recreational areas, structures, and furnishings (see 3.4.5). Where necessary, the dedicated open space may also be ecologically enhanced and restored. This area will also be actively managed to reduce wildfire risk through ongoing grazing and manual vegetation removal (see *Maha Guenoc Valley Wildfire Prevention Plan* and 2.3.1).

2.3 Agriculture

Cattle, sheep, and goat livestock grazing as well as agricultural crops, vineyards and operations shall be allowed features and activities within designated areas of the Resort.

2.3.1 Grazing Practices

Agricultural grazing has been a historic and long-term use of the Resort site. Cattle, sheep, and goat livestock grazing will continue with the Resort development; it will be an essential aspect of maintaining a rural lifestyle and aesthetic for residents and visitors while also serving a dual purpose of addressing wildfire risk (see *Maha Guenoc Valley Wildfire Prevention Plan*).

Livestock will be selectively and strategically moved between pastures in patterns and schedules necessary for livestock health and vegetation maintenance. All efforts will be made to minimize herd movements that present conflicts with resident and visitor experience and safety, traffic movement, and vineyard operations.

Grazing pasture fences and gates siting and material selection will support the best practices for livestock management while also being aligned with site-wide aesthetic objectives of utilizing consistent fencing types that blend and recede into the existing landscape (see 3.4.1).

Permanent and temporary barns will be strategically located throughout the site in order to provide structures necessary for supporting animal husbandry objectives.

2.3.2 Vineyard Practices

Vineyards will be oriented, planted, pruned, and maintained to create consistent, clean, and uniform appearance.

Vineyards shall be enclosed by fencing types that protect the site from key pests while allowing for wildlife movement. Vineyard fencing materials shall be consistent throughout the site; materials shall be permeable and recede into the landscape in order to retain views from commercial and residential sites (see 3.4.1).

SECTION 3 CIRCULATION & GENERAL SITE DESIGN GUIDELINES

3.1 Roadway & Pathway Landscape Corridors

Roadway and pathway corridors shall be designed to blend into the natural surroundings and feel like a rural country road highlighted by existing natural elements such as large trees or rock outcropping. A blend of complementary characteristic materials, elements, treatments, and landscaping will enrich each other to reinforce an overall cohesive site design character and aid in site navigation.

3.2 Roadways & Parking

3.2.1 Roadway Design

The Project is primarily served by two-way arterial roadways and two-way private roads and commercial drives. In addition to the main accessway, each individual parcel is accessed by driveways. Terminus of driveways which include cul-de-sacs and turnarounds will be engineered to comply with the minimum standards while maintaining the rural road feeling.

Roadways within the Resort shall be maintained by the Master Association or a sub-association in accordance with the CC&R's. Maintenance of roadways may include maintenance of vegetation to create fire breaks. Vegetation removal would be dictated by the Master Association and could be implemented at buildout of the subsequent residential or development area. Exceptions to County roadway standards will only be requested if a unique environmental feature is present or if it can be demonstrated that the proposed alternative provides safe access that is equivalent to County Standards.

3.2.2 Parking Lots

Unenclosed parking areas provide for additional resident or guest vehicular storage. These areas should be well-integrated into the residential architectural and landscape design and anticipate all future parking needs for the site. Parking areas and drives shall provide adequate space for vehicular and designated fire vehicle turnarounds.

Parking areas shall be screened with trees or vertical screens as much as possible from any off-site roadway, residential, or resort views; if these areas are used for the purpose of long-term vehicular storage, the location shall be screened as necessary. Wherever feasible, these areas shall be shaded with trees, trellises, or other types of canopies.

At commercial and recreational areas parking spots shall be adequately provided to accommodate visitors, residents, and guests. A separate employee parking area will be located at the central back of house operations with the employee shuttle service and employee vehicles offered for circulation within the site. Parking shall be adequately provided in proximity to residential or commercial structures, however this shall not restrict options for clustered or centralized parking options if located within the vicinity. For official parking requirements please see the GVD Zoning Ordinance.

3.2.3 Special Event Parking

In the instance of special events cars will be parked by a professional valet service. No parking will impede Resort entrances, private gates, agricultural ranch road entrances, management areas, or within the emergency vehicle accessways.

3.2.4 Driveways

Driveways, driveway turnouts, driveway turnarounds, bridges, culverts, and unenclosed parking areas will all be allowed within the residential parcels and shall comply with Lake County Standards, unless an exception to the standard is requested.

Each residential parcel presents a variety of unique topographic, vegetation, and drainage conditions; these factors combined create specific opportunities and constraints for locating driveway routes on each parcel. Driveway design shall be rural in character and limit visual impacts to adjacent parcels and Resort amenities where feasible. Driveway alignments shall minimize grading, tree removal, and other disruptions to the site to the extent feasible. The necessity for vertical curbs and retaining walls shall be minimized as much as possible except to preserve trees or other features. Driveways shall minimize site disturbance, while still providing required access for emergency and service vehicles.

Shared driveways between multiple residential parcels shall be as narrow as allowed by code and may include turnouts for two-way vehicular flow.

3.2.5 Paving Materials

Paving materials for roadways will meet minimum road and street standards for emergency vehicle access while highlighting the rural scenery and may include chip seal, decomposed granite overlay, or gravel. Depending on the architectural theme there could be stamped asphalt, concrete design treatment, or natural stone, which will be provided as part of the road development plan.

3.3 Pathways & Trailways

Pathways and trailways shall be designed to blend with the existing natural topography and vegetation. Materials and designs shall be subtle and complement the surrounding landscape and architecture. The site-wide network shall be divided between primary paths and secondary trails.

An existing and extensive system of ranch roads and horse trails shall be reutilized, to the extent feasible, as part of the existing secondary trail network. These existing roads and trails will offer well-defined travel routes to reach some of the most scenic areas and recreational opportunities throughout the Resort site. Existing trails shall be improved if necessary to align with the quality and maintenance standards of the secondary trail network.

New primary paths shall provide convenient pedestrian and bicycling routes to access Resort amenities. These pathways shall be typically situated near the primary roadway network in order to separate vehicular and non-vehicular users on more heavily-travelled routes. These paths shall

mostly be four to six feet in width and with a slope range of zero to eight percent.

New secondary trails shall expand upon the existing ranch road and horse trail network to offer more recreational walking, running, hiking, biking, and horseback riding opportunities. These paths shall mostly be five to 15 feet in width and with a slope range of zero to 15 percent. These paths shall primarily be surfaced with dirt and gravel.

3.4 Site Features

3.4.1 Walls, Fences, & Gates

A complementary design approach to walls, fences, and gates will reinforce the quality, continuity, and character of the development. These features will create a consistent aesthetic experience throughout each residential and commercial site, complementing its design by the use of each site's characteristic materials.

Retaining Walls

Wherever feasible, graded cut slopes conforming to existing conditions shall be implemented rather than retaining wall structures.

Retaining walls may be used in order to reduce grading impacts, preserve trees, create visual interest, terrace outdoor living areas, provide site access, and better achieve the intention of these Design Guidelines.

Retaining walls shall follow the existing contours of the land and be built to closely resemble the existing topography or otherwise reflect the geometries of nearby architecture. Stepped-back or terraced wall structures, which should include ample areas for planting, are encouraged where grade changes requires retaining walls to exceed four feet in height.

Retaining wall materials shall be well-suited for its purposes, surrounding site conditions, and the material selections of nearby infrastructure, architecture, and site features. Examples of appropriate materials include board formed concrete, rammed earth, soldier pile, and gabion wall design.

Fencing

Fencing shall be minimized along roadway and pathway corridors as well as within rural landscapes and the designated open space. The careful use of fencing will help to retain the sense of a continuous rural landscape. When fencing is used for the purposes of creating safety and security, protecting cultural or biological resources, or contributing to the site's agrarian character, siting and placement shall be carefully designed in relation to vineyard perimeters, pasture perimeters, or along grazing corridors (see section 2.3.1 for a description of grazing and vineyard fencing types). Fence lines which cross roadways may require cattle guards to limit livestock and wildlife passage.

Fencing materials shall be well-suited for its purposes, surrounding site conditions, and the material selections of nearby infrastructure, architecture, and site features. Examples of appropriate materials include various farm fencing systems, including wooden post & rail fencing and wooden or metal post & wire fencing.

Fences shall generally not exceed six feet in height. Fencing which needs to be higher than six feet will be considered on a case-by- case basis as determined by the HOA.

Gates

Vehicular and pedestrian gates shall primarily be used to control access points, manage livestock movements, and protect agricultural operations.

Gates shall utilize a similar complementary materials of materials and design vernacular and be well-suited for its purposes, surrounding site conditions, and the material selections of nearby infrastructure, architecture, and site features. Gates constructed off public or primary site access roads shall be set back from the road to allow emergency vehicle turn around.

Vehicular gates shall be used to control traffic for the purposes of safety and security. These gates shall be no less than the width of the roadway plus a one foot shoulder on each side. They may include signage markers, automatic opening and closing systems, voice intercoms, a lock box or other emergency release devices approved by the County Fire Chief, and associated outdoor lighting.

Pathway or trailway gates will occasionally be necessary for safety or security; in these circumstances, pedestrian gates shall be a minimum of three feet wide and, if possible, constructed in the same style and materials as the adjoining fence or nearby vehicular gates. Pedestrian gates will be self-closing and lockable with ADA compliant hardware.

Agricultural gates, including cattle guards, shall be used to control herd movements and identify access locations for vineyards, orchards, and gardens.

3.4.2 Signage

Resort signage shall create a consistent and intuitive wayfinding experience inspired by the Resort's land, culture, community, and architecture. All signs, sizes, locations, and quantities shall be carefully selected to minimize visual impact and avoid clutter while also maintaining functionality. Signage shall be aesthetically pleasing in design and form. Signage shall align with the best practices for wayfinding design, graphic design, and architectural sign fabrication industries.

Various types of signs shall be allowed throughout the Resort site. All signage types shall be designed using typical viewing heights and font sizes for vehicular and pedestrian navigation and be based on common signage standards and the viewing requirements for specific signage locations. This includes the following types of signage:

- ***Site Access Signage:*** Entryway signage shall be located at the Resort's primary, secondary, and winery entrances. These signs are intended to identify the Resort site and guide vehicular traffic from the public right of way onto the site.

- ***Street Name Signage:*** Street signage shall identify named roads within the Resort. The street signs shall be posted at intersections and are usually in perpendicularly oriented pairs identifying each of the crossing streets.
- ***Vehicular Wayfinding Signage:*** These free-standing signs shall be located prior to key navigation decision-making points in the vehicular travel path. They shall be strategically located for vehicular visibility with time to view and respond to directional information. They may include identification information and directional arrows.
- ***Pedestrian Wayfinding Signage:*** These signs shall be located at key pedestrian decision-making points and higher traffic areas. They shall guide pedestrians to project amenities, locations, and landmarks. This includes trail signage that marks starting points, routes, and distance markers.
- ***Building & Amenity Identification Signage:*** These signs shall identify entrances or arrival areas at building or amenity destinations for both drivers and pedestrians. These signs may include building, area name, and/or address information and may also be used for fire safety location identification.
- ***Code & Life Safety Signage:*** These signs shall be in the color, size, shape, and placement to provide for their respective function and conform to applicable codes.

Signage design shall be subtle with clean, modern touches and natural muted color palette. The material palette shall be compatible with nearby architectural styles and the Resort's general rural setting. This shall be accomplished by utilizing high-quality materials with elegantly incorporated details. Signs shall be of a high-quality and durable construction. Potential materials include steel, wood, concrete, stone, or painted metal or wood surfaces.

Signs shall be carefully and selectively illuminated to offer nighttime information. Illumination could be internal, external, or ambient depending on the location and site conditions. All signage lighting fixtures and sources shall emit a color-balanced, consistent, and uniform light with no browning, flickering, haloing, or other uneven effect. The use of high quality signage lighting shall follow key criteria:

- Where signs are internally illuminated, light-transmitting surfaces shall be non-gloss, matte materials.
- Only letters and logos shall transmit light. Illuminated backgrounds or boxes shall be avoided.
- Lighting signage shall be controlled by a time clock or photocell.
- All signs shall be fabricated and installed with UL approved components in compliance with all applicable building and electrical codes.

Signs shall be designed using typical viewing heights and font sizes for vehicular navigation, based on common ADA standards and the viewing requirements for specific signage locations.

Sign locations shall be carefully chosen to optimize functionality, visibility, and legibility. Although specific placement will vary based on site conditions, the following are general guidelines for sign placement:

- ***Site Preparation:*** Sign placement shall primarily be in locations selected for optimal functionality. It may be necessary to relocate any obstructions or otherwise clear rocks, shrubs, or bushes.
- ***Straight Ahead:*** Signs shall be placed in locations straight ahead of an approaching driver or pedestrian's immediate cone-of-vision. In particular, drivers cannot be expected to turn their heads to read a sign.

- ***Perpendicular:*** Signs shall be perpendicular to the approaching viewer. Signs shall never be placed parallel to passing traffic.
- ***Right Side:*** Signs shall be placed on the right side of the roadway or pedestrian path wherever possible. Drivers are not conditioned to look to the left side of the road for driving information. An exception to this rule is the use of a double-face sign mounted perpendicular to a roadway or walkway. In this situation, the sign shall be clearly legible from both directions.
- ***Advance Warning:*** Roadway signs which communicate critical information shall be placed in advance of intersections to afford a safe distance for reaction to and execution of the maneuver.

Signs spacing shall prioritize creating an organized experience throughout the Resort. Signage sites shall be carefully selected so that groups of signs do not create cluttered appearance and communicate priorities. Drivers shall be provided time to read and react to one sign before another is presented.

3.4.3 Lighting

Site-wide lighting design shall promote dark sky policies through the mindful selection of lighting fixtures and controls to ensure sensible and appropriate light. Lighting shall be selectively used to illuminate and differentiate outdoor areas; guide nighttime navigation along roadway and pathway corridors; direct access to commercial, residential, and building entries; highlight signage and address markers; and improve safety and security. Emphasis will be placed on the implementation of the energy efficient outdoor lighting technologies, that will enhance safety and security, support surrounding ecosystems, and follow dark sky preservation guidelines.

Lighting along roadways and pathways and within parking areas shall only be used to the extent necessary to guide nighttime navigation and ensure safety and security. In general, lighting shall be more prominent at intersections and commercial or residential access points to enhance safety. Lighting fixtures and patterns along roadways and pathways shall complement nearby architectural styles while also creating a thematic site-wide experience for visitors and residents. Lighting shall be no higher than necessary to provide efficient lighting for its intended purpose.

Accent lighting may be used in limited circumstances to emphasize prominent site features, such as boulders, artwork, or plantings. This type of lighting shall generally avoid directly illuminating buildings, except for facade features, and favor the use of hidden light sources, including fixtures that are recessed into the ground or fixtures hidden by plant materials.

Site-wide lighting shall avoid lighting or glare which is directed onto nearby residences, commercial buildings, or amenities. Lighting design shall also be carefully designed to avoid unnecessary illumination of natural habitats. The use of intense, bright, blinking, or flashing lights shall be avoided.

Wherever possible, landscape lighting fixtures shall be equipped with cut-off shields to minimize visibility from adjacent areas. Lighting fixtures shall be durable and easily maintained. As much as possible, lighting fixtures shall utilize energy-efficient lamps that provide light color temperatures that promote the health of humans and wildlife. On-demand photocell and motion-sensing lighting systems shall also be prioritized to minimize unnecessary nighttime lighting.

3.4.5 Recreational Areas, Structures, & Furnishings

In order to provide additional amenities and resort opportunities throughout the site, recreational areas will be allowed throughout the Resort, particularly along roadway and pathway corridors and in the nearby vicinity. This includes spaces such as hiking stations, picnicking areas, and scenic overlooks.

Within these areas, small structures such as trellises, gazebos, pergolas, and pavilions may be constructed. These areas may also accommodate various types of outdoor site furnishings, including benches, picnic areas, trash urns, bicycle racks, shade canopies, or other common elements serving Resort visitors. These areas shall be designed to be clearly visible and accessible, but not disruptive to the overall resort experience. These areas shall be designed to be reflective of nearby architecture, but also compliment into the overall resort experience.

Site furnishings shall be of high quality and durable construction. All trash and recycling bins and enclosures should be covered, unobtrusive, and located in areas that minimize visual impacts.

3.4.6 Outdoor Artwork, Monuments, & Landmarks

Outdoor artwork, monuments, landmarks, and other types of free-standing objects will be allowed throughout the Resort. These will be particularly encouraged at focal points such as roadway and pathway intersections, scenic overlooks, and arrival areas.

3.4.7 Accessory & Utility Structures

Accessory and utility structures shall be located throughout the Resort site. These may include wastewater treatment facilities, solar fields, energy substations, cisterns, wells, and propane tanks. Wherever feasible, utility facilities and structures shall be placed in locations that are not visible from the public viewshed. If required to be located in a site visible from the public viewshed, utilities facilities and structures shall be enclosed by thoughtfully detailed shielding and fencing devices, which may include quality materials and landscape elements. Wherever possible, these utilities and structures shall be landscape screened.

SECTION 4 RESIDENTIAL ARCHITECTURAL DESIGN GUIDELINES

This section applies to future residential architecture within residential estate and Resort Residential Parcels dictated by the Tentative Maps; commercial architecture and land uses are mostly dictated by the SPOD.

The Resort shall be characterized by high quality architecture designed in response to the natural beauty and diversity of the landscape. High quality design characterizes the intent of the Resort to prioritize quality materials and attention to detail that establish the Resort as a world-

renowned destination. The design of the Resort should lend itself to the creation of independent clusters that become diverse communities under the same concepts of ultra-luxury elements. Designers are tasked with the opportunity to respond to the existing landscape creating unique senses of place in conjunction with the elegance and refined taste of the Maha brand.

A collection of building and community concepts have been developed and presented in the SPOD submittal for the first phase of the Resort. The proposed design elements, elevations, and architectural typologies are representative in their design and detail. Site planning, streetscapes, community clusters, and recreational uses have been integrated into the master planning of the site and overall design to foster a quality community and experience. The Resort typologies are based on the mixed-use design intentions critical to the character of the Resort.

These guidelines should be utilized to assist in the preservation and assurance of high quality architectural and landscape design and are not intended to limit or contradict the vision of diversity in design, space, and architecture. Instead these guidelines invite creative design interpretations and encourages unique structures within the GVD.

4.1 Residential Typologies

The design for the residential buildings at the Resort envisions building typologies that have been developed in order to activate the highest potential of the landscape and respect for the site. Designed in harmony with the slope, vistas, and surrounding landscape the site planning, streetscapes, community clusters have been refined to foster a unique and awe-inspiring experience for guests and residences.

4.2 Height

Building height should be measured from the vertical distance from the average level of the highest and lowest point of the portion of the lot covered by the enclosed building footprint to the average point of the roof. Residential structures shall have a maximum height no greater than 40 feet. Dormers, chimneys, maintenance features, or alternative energy production materials are exempt from height calculations.

4.3 Lot Coverage & Density

The master development plan is centered around the concept of a light touch on the land. This design principle shall extend into planning of individual residential lots. As part of cluster development Resort Residential Parcels will not have restrictions of lot coverage, except as set forth below. Restrictions to lot development coverage shall only apply to lots within oak woodlands, which will restrict the development footprint to one acre without additional review & mitigation. Any residential parcel outside of identified oak woodlands shall have a lot coverage of no more than one and one half acres, Any residential lot can opt to develop a larger portion of their parcel as long as additional environmental review under pursuant to the California Environmental Quality Act (CEQA) such as surveys and additional mitigation for impacts are abided by.

Lot coverage includes principal and accessory structures, swimming pools and hot tubs (over 6' out of grade), as well as impermeable hardscape such as: pool decks, private water storage tanks or cisterns, garages, barns, sheds, guest houses, trellises, decks, covered and uncovered hardscape patios, and driveways. Lot coverage shall not include underground accessory structures such as septic, gas, or water lines, landscaping, or agriculture. Lot coverage shall not include structures for Resort-wide functions such as community water tanks or alternative energy production areas, which may be located on a private parcel easement.

4.4 Massing & Scale

The existing topography should inspire the architectural design. Buildings are to be sited to conscientiously acknowledge existing contours. Residential structures shall differ in their massing and scale in response to programming and site context through the Resort based on the cluster area they belong to. Residences within the same cluster shall have a similar and recognizable style to associate them with that specific commercial cluster.

4.5 Setbacks

The Project shall maintain a 50 foot setback from the Napa County line as directed by the SPOD and the Tentative Maps. Setbacks from individual property lines will be dictated by the planned development zoning of this area and shall follow the minimum fire code clearance from structures.

4.6 Building Materials & Criteria

Materials should be high quality, low-luster and enhance the vision of The Resort and Resort architecture. All building materials will abide by relevant California Building Codes "CBC" and Wildland Urban Interface "WUI" Standards. Emphasis will be placed in actively preventing the spread of fire, ember, or ashes between structures and maintaining the preservation of the principal structure. Where a connection point exists, it should be made with a fire resistive or noncombustible connector so that there is no conduit between homes and landscape structures such as fences, trellises, gazebos or porches.

4.7 Porches & Decks

Architectural projections and recesses can provide a variety of depths and features to residential homes. Porches and decks are encouraged and increase the massing of the structure. Architectural projections off the principal structure shall also abide by CBC standards. For instance, when decks are utilized measures shall be implemented to consider fire protection and prevention measures. Evidence of non-combustible, fire resistive materials, or materials with the same overall practical effect shall be provided as part of the building permit process.

4.8 Roofs & Rooflines

A variety of roof materials and styles are allowed if they are congruent with the architectural cluster in which they are being utilized. Flat or sloped roofs as well as green roofs covered with plant materials and adequate soil or growth medium are encouraged through the Site. The use of synthetic turf for roofs is prohibited. Rooftop solar panels are encouraged but shall be mindfully integrated with the roof design. Similarly, roof penetrations of primary structures (vents, chimneys, turbines, flues, sprinklers, etc.) shall be considered in the design and large rooftop mechanical equipment shall be masked as much as possible.

4.9 Exterior Fire Suppression Systems

Exterior fire suppression systems will be encouraged for all primary residential structures; these systems will be required for primary residential structures on residential access roads that exceed ¼ mile in length. Fire suppression systems are remote or heat activated. During a fire, they prevent substantial damage to the primary building as well as nearby outdoor features. Screening of equipment roof projections shall occur as much as necessary from all properties within the GVD including residential, commercial, or right of ways. In the event that the exterior fire suppression system does not blend into the architectural aesthetic and cannot be masked, an alternative may be requested as long as it is found to meet the same overall and practical effect.

4.10 Photovoltaic Panels

Solar panels are encouraged and shall be integrated with the site design when installed within the GVD. Solar panels may be located on the building roofs or set on frames in the landscape. Solar panels may not be used where they would produce a direct glare or redirect sunlight into adjacent or nearby residential or commercial properties. The incorporation of sustainable design elements such as solar will be influenced by technology and the market of innovative solar technology. All electrical conduit from solar frames to the primary structure shall be underground, where feasible.

4.11 Exterior Lighting

The Exterior lighting approach shall implement the strategies of the Dark Sky Association guidelines. By controlling lighting levels and operation, the lighting design will take careful consideration of energy efficient outdoor lighting technologies to achieve community safety, security, and acknowledge surrounding ecosystems. Adaptive lighting controls shall be provided, in combination with lighting fixtures designed to reduce glare and attenuate harsh lighting that may create shadows. All interior and exterior light sources shall be designed so that no direct beam illumination leaves the residential property line. Exterior lighting includes fixtures on the exterior of buildings, all landscape lighting fixtures, pool lighting and pathway illumination.

4.12 Accessory to Residential

Accessory Use structures shall be designed in context with the surrounding architecture and primary structure. Accessory Uses may include but are not limited to the following: garage, pool houses, accessory dwelling units, storage facilities, art studios, yoga studios, etc. The Accessory Use structure may be designed appropriately to provide visual interest and cohesion with the surrounding landscape. Measures should be taken to mask and contain Accessory Use structures that serve to function as service areas, such as housekeeping cottages. Accessory Use structures are included in lot coverage, see above for limitations on lot coverage.

SECTION 5 RESIDENTIAL LANDSCAPE DESIGN GUIDELINES

5.1 Residential Landscape Design Objectives

Residential landscape design shall be closely integrated with the existing landscape character using a 'light-touch' approach that complements and elevates the site's inherent qualities. Wherever possible, existing native and agricultural landscape patterns and landforms shall be preserved and maintained and unnecessary site disturbance shall be minimized. Wherever necessary, residential landscapes shall be restored to enhance both ecological functioning and viewsheds.

5.2 Vehicular Access & Parking

See section 3.2 for guidance on residential vehicular access and parking.

5.3 Pools & Water Features

Pools and water features—including swimming pools, infinity pools, lap pools, reflecting pools, hot tubs, and fountains as well as their required equipment—will be allowed within residential parcels and subject to local building ordinances.

Pools and water features shall be designed to visually compliment surrounding residential landscape and architectural design. Exposed walls and edges that are visible from off-site shall use a material palette that is well incorporated into the larger landscape and is compatible with building design and materials. They shall be sited to minimize grading and significant disruption to the natural landscape.

Pools and water features shall be designed and maintained to utilize water efficiently and minimize evaporation loss. Wherever possible, water features will reply upon non-potable water sources.

Pool equipment shall be located behind walls or in underground vaults so as to reduce equipment noise. Noise-absorbing covers may also be required if it the equipment is audible from adjacent properties after installation.

5.4 Pool Decks, Courtyards & Terraces

Patios, courtyards, terraces, and other similar types of outdoor areas are encouraged to accommodate a wide range of activities; these outdoor "rooms" can provide for seating and eating areas, cabanas, fire pits, foundations, pool lounging and diving areas, and other similar uses. These areas shall be designed to compliment with the site's natural topography, vegetation, and water conditions.

5.5 Walls, Fences & Gates

See 3.4.1 for guidance which also applies to residential walls and gates. See below for design guidelines for residential fences.

5.6 Residential Fences

Fencing used for the purposes of creating safety and security and contributing to the site's agrarian character will help to both retain the sense of a continuous rural landscape and mindfully preserve wildlife corridors as to not restrict special specie wildlife movement. Residential fencing locations shall also be coordinated with common area fencing throughout the Resort site.

Fencing materials shall be well-suited for its purposes, surrounding site conditions, and the material selections of nearby infrastructure, architecture, and site features. Materials shall generally be visually permeable and preserve views from roadways, pathways, commercial buildings, and nearby residential parcels. Examples of appropriate materials include various farm fencing systems, including wooden post & rail fencing and wooden or metal post & wire fencing. Fences shall generally not exceed six feet in height; fencing higher than six feet will be considered on a case-by-case basis as determined by the HOA.

5.1 Recreational Amenities

Residential parcels are allowed to include various types of outdoor recreational areas, such as tennis courts, croquet courts, bocce ball courts, lawn bowling, or polo fields. These types of recreational amenities shall not create a noise or visual nuisance for property owners outside of the Project Site. Where necessary, recreational amenities within residential parcels, shall be landscape screened.

5.2 Planting Selection & Design

As much as possible, existing landscape patterns shall be preserved and enhanced within the residential parcel. This strategy aligns with the overall Resort objective of creating a 'light-touch' approach to integrating development into the area's existing woodland, grassland, and agricultural character. To the extent feasible, the removal of mature and healthy vegetation shall be limited and disturbed areas restored to healthy and pre-development, natural conditions.

New planting designs shall be arranged in a way which improved upon the existing site condition, including shading exposed areas during the summer and providing solar access to key locations during the winter months.

The landscape design should prioritize the use of plants which are native or well-adapted to the local northern California climate and setting. Native species will become better integrated with the existing landscape and become important food sources and habitat for native birds, butterflies and wildlife. As much as possible, selected plantings shall be drought-tolerant and require limited irrigation, fertilization, and maintenance. Appendix A provides a recommended residential planting palette list. Non-native invasive species shall be avoided; in addition, planting designs shall avoid using tree species with invasive root systems near utility lines and paving.

The use of ornamental planting shall be selectively used to provide contrast and interest within the planting design. Trees and shrubs shall occasionally be used to screen certain features within the site (i.e. utility structures, parking areas, sport courts, etc.).

Any new planting design and selected species shall follow landscape wildfire prevention objectives (see 5.10), especially in terms of recommendations for plant selection, clearance, and spacing. To the extent feasible, planting design and selection shall avoid fire-prone plantings (See Appendix B).

5.3 Residential Vineyards

See 2.3.2; the guidance provided within this section will also apply to private, residential vineyards.

5.4 Irrigation & Water Conservation

Water is a valuable resource within the Guenoc Valley District. Residential landscape design shall minimize water use and irrigation requirements. In order to create a water efficient landscape, irrigation design for residential parcels shall conform to the Water Efficient Landscape Ordinance (WELO).

Landscape design shall prioritize the use of drought-tolerant, climate-appropriate, native, and adaptive plants with low water use requirements. Designs shall emphasize grouping plantings according to water consumption needs and site microclimates. Planting areas shall be mulched with locally sourced bark or gravel mulch to retain soil moisture and provide weed control. Until planting areas become established, erosion control measures such as jute-netting, straw wattles, hydroseed mixes, and erosion control groundcovers may be used.

Residential landscape design shall minimize the necessity for ongoing irrigation; as much as possible, ongoing irrigation shall be limited to plant establishment periods and be terminated thereafter. However, irrigation systems installed primarily for planting establishment could be maintained and re-activated during wildfire seasons or during wildfires for additional site and structure protection.

Irrigation distribution systems may be undergrounded and other sub-surface irrigation techniques—such as capillary systems—should be used where appropriate to limit water evaporation and run-off. Irrigation systems shall use a central, computerized controller to maximize efficiency; computerized systems with rain and soil moisture sensors and connections to evapotranspiration weather stations will facilitate efficient water use.

Wherever feasible, residential landscape design shall utilize cisterns and other applications to harvest and store stormwater for irrigation needs.

5.5 Wildfire Prevention

Wildfire is a continuous risk throughout the Resort. The following steps shall be taken in order to reduce wildfire risk on each individual residential parcel. Please refer to the *Wildfire Prevention Plan* for additional information on residential wildfire prevention strategies.

Determine Total Defensible Space and Defensible Zones

Defensible space and zones shall be established and maintained for the purposes of reducing fire risk in the immediate vicinity of the residential structure. As detailed below, the recommended approach for determining total defensible space and zones will depend on the conditions and configurations of each residential parcel.

Determining Total Defensible Space

The total defensible space will depend on the unique topographic and vegetated conditions of each parcel. The guideline below provides information on determining total defensible space:

		General Parcel Slope		
		0 - 20% *Flat to Gently Sloping*	21 - 40% *Moderately Steep*	40% + *Very Steep*
General Parcel Vegetation Coverage	Grass-Dominated	50 feet	100 feet	100+ feet
	Shrub-Dominated	100 feet	150 feet	150+ feet
	Tree-Dominated	50 feet	100 feet	150+ feet

- Grass-Dominated Coverage: Landscapes dominated by grasses, weeds, and widely scattered shrubs
- Shrub-Dominated Coverage: Landscapes dominated by shrubs, scrub, or chaparral
- Tree-Dominated Coverage: Landscapes dominated by trees; if understory is substantially shrubs, follow "shrub-dominated coverage" category

Determining Defensible Zones

Two defensible zones shall be established and maintained within the total defensible space:

- Zone 1: Regardless of the total defensible space, the first defense zone will be maintained zero to 30 feet from the edge of the residential structure.
- Zone 2: The second defense zone will be maintained from 30 feet from the edge of the building to the edge of the total defensible space (e.g. 50 feet, 100 feet, 150 feet); this includes a defensible space of zero to 15 feet from the driveway edge.

Wherever necessary or possible, adjacent residential parcel owners and the Resort ownership will cooperatively address defensible space concerns which cannot be fully established or maintained within the residential parcel line.

Prepare Site by Removing & Reducing Flammable Vegetation

Once the total defensible area and zones are established, the following fuel reduction strategies shall be prioritized to prepare the site for residential dwellings:

Zone 1: Remove Flammable Vegetation

Within this zone, highly flammable vegetation shall be removed. This includes removing all standing dead trees and shrubs. All downed dead trees, tree branches, and shrubs shall also be removed if not yet decayed. All dead tree and shrub branches shall be removed. Trees shall generally be pruned up to a height of 10 feet, depending on tree species and understory conditions. Flammable shrub species which are not removed shall be thoroughly pruned.

Zone 2: Reduce Flammable Vegetation

Within this zone, flammable vegetation shall be reduced. Trees and shrubs shall be selectively pruned to reduce flammable parts, such as low-hanging or dead branches. Dead vegetation shall also be selectively removed within this wider zone. To adequately protect the parcel from wildfire risk, selective clearing and thinning of existing vegetation to create well-separated groupings of plantings may be necessary.

Establish New Landscape and Site Design

Various actions shall be prioritized to create a fire safe landscape and site design surrounding the residential structure.

Fire-Resistant Planting Design and Selection

Planting designs shall accommodate adequate planting spacing and clearance strategies in order to reduce the risk of fire spreading horizontally or vertically (see *Wildfire Prevention Plan* for further spacing and clearance recommendations). Planting designs and patterns shall anticipate the mature size of new trees and shrubs. Simple, low-volume, and well-separated planting arrangements will generally achieve these spacing and clearance objectives. All efforts shall be made to avoid tree limbs touching the residential structure or powerlines; tree limbs shall also not be within 10 feet of the chimney.

Planting selection shall avoid fire-prone species and instead prioritize fire-resistant species (see Appendix B). In general, fire-resistant species are low-growing with a high moisture content and have stems or leaves that are not resinous, oily, or waxy.

Small-Scale Fire Breaks: Hardscapes and Irrigation

Wherever possible, the landscape design shall be configured in a way to create a series of smaller-scale fire breaks in the immediate vicinity of the residential structure. This includes selectively using a pattern of non-combustible materials (such as gravel mulch, boulders, and rocks) as well as driveways, walkways, patios, and parking areas to reduce fire risk. Pools, water features, ponds, or streams shall also be creatively used for this purpose.

Additional Strategies

Additional landscape design strategies shall also be prioritized to reduce fire risk within the residential parcel and improve emergency response. This includes the following:

- Constructing fencing with non-combustible materials, such as stone or metal, rather than wood;
- Enclosing areas below decks to reduce the risk of debris ignition;
- Clearly marking the address number on the house itself and at the driveway entry to aid in identification in the case of a fire emergency; and
- As much as possible, designing residential driveways and bridges to allow for large-scale emergency vehicle access.

Manage Landscape to Reduce Risk

Various landscape management practices shall be prioritized to address wildfire hazards within the residential landscape. This includes the following recommendations for residential property owners:

- Periodically inspect the residential property to maintain defensible space—which includes ongoing removal and reduction of flammable vegetation and reestablishment of vegetation clearance and spacing standards;
- Prune tree limbs which are within 10 feet of buildings or chimneys or are otherwise encroaching on powerlines;
- Within the defensible space, trim tree limbs below 10 feet in height; for smaller trees, prune the lower 1/3 of the branches;
- Routinely mow grasses and wildflowers within the defensible space to a maximum height of 4 inches, particularly during dry seasons;
- Keep vegetation well-irrigated, particularly within the first defense zone;
- Where feasible, irrigation systems used for plant establishment should be maintained for additional wildfire protection;
- Remove vegetation debris that accumulates on the roof or within the rain gutters;
- Place combustible debris (firewood, wood scraps, grass clippings, leaf piles, or garbage cans) and propane tanks outside of the first defense zone; and
- Keep any ignitable outdoor furniture and equipment (i.e. wooden brooms and shovels) 10 feet away from the residential structure or in an enclosure.

Fire prevention landscape maintenance shall be a permanent and ongoing requirement of individual homeowners and will be incorporated into the CC&Rs.

5.6 Exterior Service Areas

Exterior service areas—such as trash and recycling enclosures, work areas, and outdoor storage—contribute to the functionality of residential parcels. These areas shall be located and designed to be discrete and screened from the public viewshed. Wherever feasible, these areas shall be integrated into the residential building design. Trash and recycling storage areas shall be easily accessible to service personnel, contain odor, and be secured from wildlife.

5.7 Landscape Structures & Furnishings

Residential landscapes may include outdoor structures such as trellises, gazebos, pergolas, pavilions, and play equipment. The landscape may also include outdoor site furnishings, including benches, picnic tables, trash urns, bicycle racks, shade canopies, or other common elements. Where feasible and aligned with the site design, these structures and furnishings should be

designed to appear as extensions of buildings or building components. To the greatest extent possible, freestanding elements should be sited so as to not be visible from adjacent residences or the public right of ways. Furnishings shall be of high-quality and durable.

5.8 Landscape Lighting

Residential lighting design shall preserve nighttime dark skies by minimizing exterior lighting. Lighting shall be selectively used to illuminate and differentiate outdoor areas, guide nighttime navigation, direct access to building entries, highlight signage and address markers, and improve safety and security.

Accent lighting may be used in limited circumstances to emphasize prominent site features, such as boulders, artwork, or plantings..

Wherever possible, light fixtures and sources shall be hidden from direct daytime or nighttime view by being recessed into the ground or hidden by plant materials. Lighting levels shall be no higher than necessary to provide efficient lighting of various landscape areas. Low-level, pedestrian-scale lighting shall be used to the greatest extent possible.

Landscape lighting fixtures should be equipped with cut-off shields to limit visibility from adjacent areas. Lighting fixtures shall be durable and easily maintained. As much as possible, outdoor lighting shall utilize energy-efficient light sources that provide appropriate light color temperatures. On-demand, photocell and motion-sensing lighting systems shall also be prioritized to minimize unnecessary nighttime lighting.

Residential landscape lighting shall avoid lighting or glare which is directed onto the roadway or nearby residences, commercial buildings, or amenities. Lighting design shall also be carefully designed to avoid unnecessary illumination of natural habitats. The use of intense, bright, blinking, or flashing lights shall be avoided.

5.9 Outdoor Artwork & Monuments

Outdoor artwork, monuments, and other types of free-standing objects may be allowed on residential parcels. These will be allowed to provide visual interest and opportunities for personal expression by homeowners. These types of objects shall be placed in locations which limit visibility from the public right of way.

5.10 Address Markers

Residential parcels shall have an address marker or monument at driveway entrances. In the case of shared or closely aligned driveways, a single address marker may serve multiple residential parcels. An address marker may also be placed on the residential structure.

Address markers shall be designed to compatible with nearby architecture. Markers shall minimize visual impact and only be used where necessary.

They shall be constructed of high-quality materials. Text and number size shall be visible and legible, particularly at the eye-level for vehicles travelling in both directions; text and number colors shall contrast with their background for optimal viewing from a variety of distances. In order to aid nighttime navigation and safety, address markers shall include either a backlight or downlight lighting treatment; text shall also be reflective for emergency purposes.

SECTION 6 IMPLEMENTATION PLAN

6.1 Applicability & Use

The basic land use standards for the Resort site are established under several documents that have been approved by the County of Lake Board of Supervisors. These include: 1) Lake County General Plan General Plan designation Resort Commercial, 2) The proposed Guenoc Valley District Zoning Ordinance, 3) the Specific Plan of Development ("SPOD"), 4) the Maha Wildfire Prevention Plan, 5) the Tentative Subdivision Maps, and 6) the Maha Resort Guenoc Valley Development Agreement (collectively, the "Governing Documents").

These Design Guidelines constitute a companion document intended to supplement the GVD, as it applies to future development within the Resort site. In the event of a conflict between these Design Guidelines and the Governing Documents, the provisions of the Governing Documents shall control. All uses, construction and improvements permitted under these Design Guidelines are subject to review and approval of the architectural committee established under the CC&Rs and if there is no such committee established, then by the board of directors of the Master Association.

6.2 Conformance with Design Guidelines

Each future building permit submittal shall be reviewed for conformance with these Design Guidelines at time of submittal with the County of Lake. Conformance and completeness shall be assessed and verified by the development team or managing party of the Resort. Conformance to standards established for the Resort are subject to the qualifications set forth in the Development Agreement.

A determination of such conformance is not intended to be deemed an approval as to the compliance of design or construction plans or documents with any applicable building codes and standards, including engineering, building codes, or any applicable state or federal law or regulation.

6.3 Maintenance & Enforcement

The provisions of these Design Guidelines, in conjunction with the Governing Documents, shall apply to future development within the Guenoc Valley District. This document provides general design guidelines that property owners/project applicants must use in applications for individual projects within the Guenoc Valley District. Maintenance and enforcement of these guidelines will be detailed by the CC&R's.

APPENDICES

Appendix A: Recommended Plant Palette List

Note: The final version of the Design Guidelines will include further define this recommended planting palette by categories such as evergreen/deciduous, flowering, fruiting, California native, and Water Use Classification of Landscape Species (WUCOLS).

TYPE	SCIENTIFIC NAME	COMMON NAME
TREE	Acer spp.	Maple
TREE	Aesculus californica	Buckeye
TREE	Aesculus indica	Asian Buckeye
TREE	Alnus spp.	Alder
TREE	Arbutus spp.	Strawberry Tree, Cultivars
TREE	Betula pendula	European White Birch
TREE	Calocedrus decurrens	Incense Cedar
TREE	Camellia sinensis	Tea
TREE	Carpinus betulus	European Hornbeam
TREE	Carpinus caroliniana	North American Hornbeam
TREE	Cercidiphyllum japonicum	Katsura
TREE	Cercis canadensis 'Forest Pansy'	Forest Pansy RedBud
TREE	Cercis occidentalis	Red Bud
TREE	Citrus hystrix	Kieffer lime
TREE	Corylus cornuta var. californica	California Hazel
TREE	Fagus sylvatica	European Beech
TREE	Fraxinus spp.	Ash
TREE	Gleditsia spp.	Locust
TREE	Juglans californica	California Walnut Groves
TREE	Koelreuteria paniculata	Golden Rain Tree
TREE	Lagerstroemia spp.	Crape Myrtle, Cultivars
TREE	Laurus nobilis	Sweet Bay
TREE	Magnolia spp.	Magnolia, Cultivars
TREE	Malus spp.	Apple or Crabapple
TREE	Olea europaea	Olive , Cultivars
TREE	Owari Satsuma	Satsuma
TREE	Platanus × acerifolia	London Plane
TREE	Platanus acerifolia 'Columbia'	London Plane Tree
TREE	Platanus racemosa	California Sycamore
TREE	Prunus blireana	Pink Flowering Plum
TREE	Prunus ilicifolia	Hollyleaf Cherry
TREE	Prunus mume	Japanese Flowering Apricot
TREE	Sequoia sempervirens	Coast Redwood

TYPE	SCIENTIFIC NAME	COMMON NAME
TREE	Sorbus alnifolia	Korean Mountain Ash
TREE	Sorbus alnifolia	Korean Mountain Ash
TREE	Styrax japonicus	Japanese Snowbell
SHRUB/VINE	Achillea melefolium	Yarrow
SHRUB/VINE	Adenostoma fasciculatum	Chamise
SHRUB/VINE	Artemisia californica 'Canyon Gray'	Trailing California Sagebrush
SHRUB/VINE	Asclepias spp.	Milkweeds
SHRUB/TREE	Atriplex canescens	Saltbush, fourwing
SHRUB/TREE	Bergenia crassifolia	Winter-Blooming Bergenia
SHRUB/TREE	Brunfelsia pauciflora 'Floribunda'	Yesterday-Today-Tomorrow
SHRUB/GROUNDCOVER	Buddleja davidii	Butterfly Bush
SHRUB/GROUNDCOVER	Buxus spp.	Japanese Boxwood
SHRUB/GROUNDCOVER	Callistemon	Bottlebrush
SHRUB/GROUNDCOVER	Calycanthus occidentalis	Spicebush
SHRUB/GROUNDCOVER	Calycanthus occidentalis	Western Spice Bush
SHRUB/GROUNDCOVER	Caragana arborescens	Siberian Pea-Shrub
SHRUB/GROUNDCOVER	Carpenteria californica	Bush Anemone
SHRUB/GROUNDCOVER	Carpenteria californica	California Bush Anemone
SHRUB/GROUNDCOVER	Ceanothus spp.	Ceanothus, Cultivars
SHRUB/GROUNDCOVER	Cenothus spp.	California Lilac
SHRUB	Cephalanathus occidentalis	Button Willow
SHRUB	Cercis occidentalis	Western Redbud
SHRUB	Chaenomeles japonica	Japanese Flowering Quince
SHRUB	Chamaemelum nobile	Roman Chamomile
SHRUB	Cistus salviifolius	Sage-leaf Rockrose
SHRUB	Cistus spp.	Rockrose 'Victor Reiter'
SHRUB	Clematis ligusticifolia	Pipestem
SHRUB	Convolvulus cneorum	Silverbush
SHRUB	Convolvulus sabatius	Ground Italian Glory
SHRUB	Cornus sericea spp.	Dogwood
SHRUB	Cynara cardunculus	Artichoke
SHRUB	Echeveria x imbricata	Hens and Chicks
SHRUB	Echinacea purpurea	Purple Cone Flower
SHRUB	Eleutherococcus senticosus	Siberian Ginseng
SHRUB	Encelia californica	CA Bush Sunflower
SHRUB	Epilobium californica	California Fuchsia
SHRUB	Epilobium canum	Fuschia
SHRUB	Erigeron glaucus	Seaside Daisy
SHRUB	Erigeron karvinskianus	Santa Barbara Daisy
SHRUB	Eriodictyon californicum	California Yerba Santa Scrub

TYPE	SCIENTIFIC NAME	COMMON NAME
SHRUB	Eriogonum fasciculatum	California Buckwheat
SHRUB	Eryngos spp.	Sea Holly
SHRUB	Fragaria chiloensis	Wild Strawberry
SHRUB	Frageria vesca	strawberry
SHRUB	Frangula californica	California Coffeeberry
SHRUB	Fremontodendron	Flannel Bush
SHRUB	Gaillardia grandiflora	Gaillardia
SHRUB	Galvezia speciosa	Island snapdragon
SHRUB	Garrya elliptica	Coast Silktassel 'James Roof'
SHRUB	Gazania 'Mitsawa Orange'	Orange Trailing Gazania
SHRUB	Grindelia stricta	Gumplant
SHRUB	Hemerocallis hybrid	Daylily
SHRUB	Hemerocallis spp.	Daylily
SHRUB	Heteromeles arbutifolia	California Holly, Toyon
SHRUB	Hoytia macrostachya	Leather Root
SHRUB	Lavandula spp.	Lavender
SHRUB	Liriope spicata 'Silver Dragon'	Lily Turf
SHRUB	Lonicera hispidula	honeysuckle
SHRUB	Lonicera involucrata	Twinberry
SHRUB	Lonicera japonica 'Halliana'	Hall's Japanese Honeysuckle
SHRUB	Mahonia pinnata	California holly grape
SHRUB	Mahonia repens	Creeping Mahonia
SHRUB	Mahonia spp.	Oregon Grape
SHRUB	Malacothamus fremontii	Bush Mallow
SHRUB	Marrubium vulgare	Horehound
PERENNIAL/SHRUB	Mentha × piperita	Double Mint
PERENNIAL/SHRUB	Mentha suaveolens	Applemint
GROUNDCOVER	Mimulus aurantiacus	Bush Monkey Flower
GROUNDCOVER	Miscanthus sinensis	Silver Grass
GROUNDCOVER	Monarda fistulosa	Wild Bergamot- Bee balm
GROUNDCOVER	Myrica californica	Pacific Wax Myrtle
GROUNDCOVER	Nassella spp. - Melica spp.	Purple Needle Grass
GROUNDCOVER	Origanum vulgare	Sweet Marjoram
GROUNDCOVER	Pelargonium peltatum	Trailing Geranium
GROUNDCOVER	Penstemon heterophyllus var.	Foothill Penstemon
GROUNDCOVER	Philadelphus ssp	Mock Orange
GROUNDCOVER	Phlomis fruticosa	Jerusalem Sage
GROUNDCOVER	Pholmis lanata	Wooly Jerusalem Sage
GROUNDCOVER	Phormium tenax	New Zealand Flax
PERENNIAL	Plumbago auriculata	Cape Plumbago

TYPE	SCIENTIFIC NAME	COMMON NAME
PERENNIAL	Prunus laurocerasus 'Zabeliana'	Zabel Laurel
PERENNIAL	Punica spp.	Pomegranate
PERENNIAL	Pycnanthemum	Mountain Mint
PERENNIAL	Rhamnus Eve Case	low coffeeberry
PERENNIAL	Rhamnus Mound San Bruno	low coffeeberry
PERENNIAL	Rhamnus purshina	Cascara Buckthorn
PERENNIAL	Rhododendron occidentale	Western Azalea
PERENNIAL	Rhus ovata	Sugar Sumac
PERENNIAL	Ribes aureum	Golden Currant
PERENNIAL	Ribes californicum	Hillside Gooseberry
PERENNIAL	Ribes malvaceum	Chaparral Currant
PERENNIAL	Ribes sanguinium	Red Flowering Currant
PERENNIAL	Ribes ssp.	Gooseberry and Currant
PERENNIAL	Rosa banksiae	Flowering Lady Banks' Rose
PERENNIAL	Rosa x Noatraum	Carpet Rose
PERENNIAL	Rudbeckia hirta	Black-Eyed Susan
PERENNIAL	Rudbeckia spp.	Ox-Eye Daisy
PERENNIAL	Salix breweri	Brewer’s Willow
PERENNIAL	Salvia spp.	Sage
PERENNIAL	Sambucus nigra ssp. caerulea	Blue Elderberry
PERENNIAL	Soleirolia soleirolii	Baby's Tears
PERENNIAL	Stachys byzantina	Lamb's Ear
PERENNIAL	Styrax rediviva	California Snowdrop Bush
PERENNIAL	Symphoricarpos albus var. laevigatus	Snowberry
PERENNIAL	Tagetes lemmonii	Bush Marigold
PERENNIAL	Teucrium cossonii majoricum	Majorcan Germander
PERENNIAL	Teucrium fruticans	Bush Germander
PERENNIAL	Teucrium x lucidrys	Germander
PERENNIAL	Thymus vulgaris	English Thyme
PERENNIAL	Tulbaghia violacea	Society Garlic
PERENNIAL	Vitis californica	California Wild Grape
FRUIT	Actinidia spp.	Kiwi, Cultivars
FRUIT	Amelanchier spp.	Serviceberry
FRUIT	Carya illinoinensis	Pecan Seedling
FRUIT	Castanea spp.	Chestnut, Cultivars
FRUIT	Citrus aurantiifolia 'Thornless'	Mexican Thornless Lime
FRUIT	Citrus limon 'Improved Meyer'	Improved Meyer Lemon
FRUIT	Corylus avellana	Hazel, Cultivars

FLOWER	Lomatium dasycarpum	Desert Parsley
FLOWER	Lupinus sericstus	Cobb Lupine
FLOWER	Lupinus albifrons	Silver Lupine
FLOWER	Penstemon heterophyllus	Penstemon
FLOWER	Phacelia californica	Phacelia
FLOWER	Solidago californica	California Goldenrod
FLOWER	Tropaeolum majus	Nasturtium
FLOWER	Zinnia spp.	Sunflowers
GRASS	Agrostis pallens	Seashore Bent Grass

TYPE	SCIENTIFIC NAME	COMMON NAME
GRASS	Asclepia erocarpa	Indian Milkweed
GRASS	Bromus carinatus	California Brome
GRASS	Calamagrostis nutkaensis	Pacific Reed Grass
GRASS	Carex barbarae	Santa Barbara Sedge
GRASS	Carex spp.	Sedge
GRASS	Dantonia californica	California Oatgrass
GRASS	Deschampsia caepitosa	Tufted Hairgrass
GRASS	Eleocharis macrostachya	Common Spikerush
GRASS	Elymus condensatus	Giant Wildrye
GRASS	Elymus glaucus	Blue Wild Rye
GRASS	Equisetum hyemale ssp.affine	Giant Scouring Rush
GRASS	Festuca glauca	Blue Fescue
GRASS	Festuca glauca	Blue Fescue 'Siskiyou Blue'
GRASS	Festuca californica	California Fescue
GRASS	Festuca iadaohensis	Idaho Fescue
GRASS	Festuca mairei	Atlas Fescue
GRASS	Festuca rubra	Creeping Red Fescue 'Patrick's Point'
GRASS	Helictotrichon sempervirens	Blue Oat Grass
GRASS	Hordeum brachyantherum	Meadow Barley
GRASS	Juncus bufonius	Toad Rush
GRASS	Juncus effusus	Soft Rush
GRASS	Juncus patens	California Gray Rush 'Elk Blue'
GRASS	Koeleria macranta	June Grass
GRASS	Leymus triticoides	Creeping Wild Rye
GRASS	Melica californica	California Onion Grass
GRASS	Muhlenbergia capillaris	Muhly Grass
GRASS	Muhlenbergia rigens	Deer Grass
GRASS	Nassella (Stipa) pulchra	Purple Needle Grass
GRASS	Poa secunda	Pine Bluegrass
GRASS	Schoenoplectus acutus	Hardstem Bulrush
GRASS	Scirpus acutus	Hardstem Bulrush
GRASS	Scirpus californicus	California BuIrush
GRASS	Sporobolus airoides	Alkali Sacaton
GRASS	Stipa cemua	Nodding Needle Grass
GRASS	Stipa pulchra	Purple Needle Grass
FERN	Athyrium filix-femina	Lady Fern
FERN	Polystichum munitum	Western Sword Fern

VINE	Parthenocissus tricuspidata	Boston Ivy
VINE	Rosa banksiae	'Lady Banks' Rose
VINE	Rubus spp.	Bramble Fruits, "Berries"
VINE	Vitis spp.	Grapes, Cultivars
ANNUAL	Antirrhinum majus 'Dwarf Varieties'	Snapdragon
ANNUAL	Begonia semperflorens-cultorum	Wax Begonia
ANNUAL	Brassica oleracea acephala	Flowering Kale
ANNUAL	Celosia cristata 'Dwarf Varieties'	Feather Crested Cockscomb
ANNUAL	Centaurea cineraria	Dusty Miller
ANNUAL	Clarkia unguiculata	Purple Clarkia
ANNUAL	Coleus hybridus	Coleus
ANNUAL	Dianthus spp.	Dianthus Flowers
ANNUAL	Euphorbia pulcherrima	Poinsettia
ANNUAL	Iberis sempervirens	Candytuft, Cultivars
ANNUAL	Lobelia erinus	Edging Lobelia
ANNUAL	Lobularia maritima	Sweet Alice
ANNUAL	Matricaria recutita	Common Chamomile
ANNUAL	Petunia hybrida	Petunia
ANNUAL	Phacelia tanacetifolia	Phacelia
ANNUAL	Primula polyantha	English Primrose
ANNUAL	Salvia splendens	Scarlet Sage
ANNUAL	Tagetes patula	French Marigold
ANNUAL	Viola wittrockiana	Pansy
ANNUAL	Zinnia elegans	Zinnia

Appendix B: Fire-Prone Plant List

The following plants shall generally be avoided when establishing new landscape designs as to reduce wildfire risk.

TYPE	SCIENTIFIC NAME	COMMON NAME
TREE	Acacia spp.	Acacia species
TREE	Abies spp.	Firs
TREE	Cedrus spp.	Cedars
TREE	Chamaecyparis spp.	False Cypress
TREE	Cupressus spp.	Cypress
TREE	Eucalyptus spp.	Eucalyptus
TREE	Larix spp.	Larch
TREE	Notholithocarpus densiflorus	Tan Oak, Tanbark Oak
TREE	Palms	Palm (if dry fronds)
TREE	Picea spp.	Spruces
TREE	Pinus coulteri	Coulter Pine
TREE	Pinus muricata	Bishop Pine
TREE	Pinus radiata	Monterey Pine
TREE	Pinus sabiniana	Gray Pine
TREE	Pinus serotina	Pond Pine
TREE	Pinus spp.	Pines
TREE	Pinus sylvestris	Scots Pine
TREE	Pinus torreyana	Torrey Pine
TREE	Pseudotsuga menziesii	Douglas-Fir
TREE	Thuja spp.	Arborvitae
TREE	Tsuga spp.	Hemlock
TREE	Umbellularia californica	California Bay
SHURB	Arctostaphylos spp.	Manzanita
SHRUB	Adenostoma fasciculatum	Chamise, Greasewood
SHRUB	Artemisia californica	Coastal Sagebrush
SHRUB	Baccharis spp.	Coyote Brush
SHRUB	Cytisus scoparius	Scotch Broom
SHRUB	Ecchium	Pride of Madeira
SHRUB	Erigonum fasciculatum	California Buckwheat
SHRUB	Genista monspessulana	French Broom
SHRUB	Pickeringia montana	Chaparral Pea
SHRUB	Quercus spp.	Scrub Oak (brushy oaks)
SHRUB	Rosmarinus officinalis	Rosemary
SHRUB	Salvia mellifera	Black Sage
SHRUB	Spartium junceum	Spanish Broom

TYPE	SCIENTIFIC NAME	COMMON NAME
SHRUB	Ulex europea	Gorse
SHRUB	Vaccinium ovatum	Evergreen Huckleberry
TREE/SHRUB	Chrysolepis chrysophylla	Qinquapin,Giant
TREE/SHRUB	Juniperus spp.	Junipers
TREE/SHRUB	Taxus spp.	Yew
GRASS	Cortaderia jubata	Jubata Grass
GRASS	Cortaderia selloana	Pampas Grass
GRASS	Pennisetum spp.	Fountain Grass
SHRUB/GRASS	Bamboo	Bamboo, all species

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Name: Langtry Farms, LLC
Violation Date: 12-02-2014
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: Returned to compliance on 01/27/2015. At least three years of waste disposal manifests should be kept on site and available for review during a routine inspection.
Violation Division: Lake County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 396276
Site Name: Langtry Farms, LLC
Violation Date: 12-02-2014
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/27/2015. All hazardous waste containers should be properly labeled.

Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Not reported
Violation Division: Lake County Environmental Health
Violation Program: HMRRP

LANGTRY FARMS, LLC (Continued) **S121774055**

Violation Source:	CERS
Site ID:	396276
Site Name:	Langtry Farms, LLC
Violation Date:	12-02-2014
Citation:	22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	Returned to compliance on 01/27/2015. the amount of time that a waste generator may keep waste on site before it must be shipped varies according to how much waste is generated each month. Please see the provided brochure that explains the waste storage rules for hazardous waste generators. In some cases used oil has its own set of time limits.
Violation Division:	Lake County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	396276
Site Name:	Langtry Farms, LLC
Violation Date:	12-02-2014
Citation:	22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description:	Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes:	Returned to compliance on 01/27/2015. We discussed the use of a power washer to degrease farming equipment in the field rather than bringing the equipment back to the shop. Occasionaly this is necessary due to th location of equipment at distant locations around the ranch. Consideration should be made to collect contaminated runnoff from the cleaning process if it is dermined to constitute a hazardous waste. In some cases contaminent levels may be too low to meet the definition of hazardous waste. On occasion these low levels of hazardous materials may still be prohibited from land disposal because of water quality regulations. For example water containing benzene at 1 part per billion would prevent disposal to the grround in some areas of California. You may also wish to research wheather or not your onsite waste water treatment system is permitted to accept the waste water from your equipment cleaning operations.
Violation Division:	Lake County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	396276
Site Name:	Langtry Farms, LLC
Violation Date:	03-01-2018
Citation:	HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	OBSERVATION: Owner/Operator failed to submit inventory reports by March 1 to CERS. (Activities, Inventory, Map, Emergency Response and Contingency) CORRECTIVE ACTION: Owner/Operator shall submit inventory reports in CERS within 30 Days of this notice.

Eval Notes: This business qualifies for an agricultural exemption from California requirements for a SPCC under the Above Ground Petroleum Storage Act. Farms are not exempt from the Federal EPA requirement to prepare a SPCC. Please see the information provided from Fed EPA about this requirement. We as the local enforcemnt agency for the California Above Ground Petroleum Storage Act are limited to asking a farm to inspect their tanks for leaks and to provide secondary containment but not a full SPCC. Please provide our office with a document on company letterhead or some other offical communication that states all tanks on the farm have secondary containment and that any drains on the secondary containment are closed. (These drains are only opened to drain uncontaminated water and not left open during the winter season.)

Eval Program:	OSHA
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	12-02-2014
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	No violations noted. CESQG - less than 27 gallons a month of used oil from compressors. The used oil is being included with the used oil from the farming operations. Gary said that they would removed the 55 gallon drums that used to be used for storage and they would only have a 5 gallon bucket on site and transport that to the farm waste consolidation site.

WMUDS/SWAT:
Edit Date: Not reported
Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

BUTTS CANYON RD. FACILITY (Continued) **S101175220**

Primary Waste:	DRILLS
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Erosion Wastes
Secondary Waste Type:	I
Base Meridian:	Not reported
NPID:	Not reported
Tonnage:	0
Regional Board ID:	Not reported
Municipal Solid Waste:	False
Superorder:	False
Open To Public:	False

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/19/2019
Date Data Arrived at EDR: 07/30/2019
Date Made Active in Reports: 09/03/2019
Number of Days to Update: 35

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/19/2019
Date Data Arrived at EDR: 07/30/2019
Date Made Active in Reports: 09/03/2019

Next Scheduled EDR Contact: 01/13/2020
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Last EDR Contact: 08/15/2011
Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/19/2019

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019
Date Data Arrived at EDR: 04/05/2019
Date Made Active in Reports: 05/14/2019
Number of Days to Update: 39

Last EDR Contact: 10/04/2019
Next Scheduled EDR Contact: 01/13/2020
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

CA DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

CA HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

CA WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

CA WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 4 CUPA Listings sites within approximately 0.25 miles of the target property.

SO LAKE CO FIRE MIDDLETOWN STATION 60 (Continued) **S104575097**

Citation:	HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple
Violation Description:	Business Plan Program - Administration/Documentation - General
Violation Notes:	Returned to compliance on 06/15/2016. There were approximately 7 tanks x approx 200 cubic feet/tank=1400 cubic feet of oxygen onsite during inspection that were not reported on CERS inventory. Please add oxygen to inventory. Onsite personnel indicated anywhere from 7 to 11 of the larger cylinders onsite at any given time.

Site Name:	So Lake Co Fire Middletown Station 60
Violation Date:	05-16-2016
Citation:	HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description:	Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 06/15/2016. Waste oil tank onsite that is owned and operated by Lake County Public Services as a service to the community. Numerous oil filters that appeared to have been emptied and left in various places around oil tank instead of being placed in waste oil filters drum after draining. Small amount of soil also impacted by relaxed enforcement of dumping protocol (Fire Department cannot always be around to supervise). Clean up oil filters and place in 55 gallon drum onsite for their disposal. Remove and properly dispose of soil impacted by spills.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 48932
Site Name: Middletown USD-MHS-MMS-MCES
Violation Date: 11-06-2013

MIDDLETOWN USD-MHS-MMS-MCES (Continued) **S121786705**

Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment..
Violation Notes:	Returned to compliance on 10/20/2016. Maintenance yard - north perimetre: fluorescent bulbs pile; next to that were numerous plastic bottles, containers with various "old" products stored in weeds. Welding/Wood Shop: 2 - 281 cu ft O2 cylinders standing, not contained by belt or chain, which would prevent them from being knocked over. OLD Science lab - now an Art classroom: Science storeroom has a wall of lockers - unlocked. When opened, Mike found old chemicals stored inside. Meanwhile, there are at least 10-12 guitars leaning up against the wall of lockers as well as across the narrow aisle against cabinets where the counter top is littered with old chemical glass containers, egg carton w/ 6 eggs, various school paraphanalia

Violation Program:	HW
Violation Source:	CERS
Site ID:	48932
Site Name:	Middletown USD-MHS-MMS-MCES
Violation Date:	11-06-2013
Citation:	22 CCR 23 66273.5 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.5
Violation Description:	Failure to properly manage mercury containing lamp bulbs which are destined for reclamation or recycling from the date the bulbs were first discarded or broken.
Violation Notes:	Returned to compliance on 10/20/2016. Large pile of fluorescent bulbs stored outside on pallet - broken glass evidence of vulnerbility. Mike, Maintenance, stated company replaced ALL the school's bulbs several months ago, took many old bulbs except this pile. Lynn will contact that company to come pick up, or Mike/Lynn will contact Haz Mobile to see how to arrange appropriate disposal. They were given Haz Mobile schedule and the Ukiah phone #.

MIDDLETOWN USD-MHS-MMS-MCES (Continued) **S121786705**

	23, Section(s) 66273.34
Violation Description:	Failure to properly label the following categories of universal waste as: 1) Each batteries or the container in which the batteries are contained as "Universal Waste-Battery(ies)". 2) Each mercury-containing equipment or the container in which the mercury-containing equipment is contained as "Universal Waste -Mercury-Containing Equipment". 3) Each Florescent lamp or the container or package in which the lamps are contained as "Universal Waste-Lamp(s)". 4) Each electronic devices or the container or pallet in or on which the electronic devices are contained as "Universal Waste-Electronic Device(s)". 5) Each CRTs or the container or pallet in or on which the CRTs are contained as "Universal Waste-CRT(s)". 6) A container of CRT glass shall be labeled or marked clearly with the following phrase: "Universal Waste-CRT glass". 7) In lieu of labeling individual electronic devices, CRTs, and/or containers of CRT glass pursuant to subsections d) through f) of this section, a universal waste handler may combine, package, and accumulate those universal wastes in appropriate containers or within a designated area demarcated by boundaries that are clearly labeled with the applicable portion(s) of the following phrase: "Universal Waste-Electronic Device(s)/Universal Waste - CRT(s)/Universal Waste-CRT Glass".
Violation Notes:	Returned to compliance on 10/20/2016.
Violation Division:	Lake County Environmental Health
Violation Program:	HW
Violation Source:	CERS
Site ID:	48932
Site Name:	Middletown USD-MHS-MMS-MCES
Violation Date:	11-06-2013
Citation:	HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)
Violation Description:	Failure to properly dispose of hazardous waste at an authorized location.
Violation Notes:	Returned to compliance on 10/20/2016. Since chemicals left in OLD Science Room/Art classroom, we must assume they are considered "waste". Discussed with Lynn & Mike - contact Haz Mobile and share what chemicals/amounts MUSD wants to dispose of. They will then find out if Haz Mobile can take all the chemicals and the price. Also stated that Clearlake High's science teacher, Ken Hook, has a disposal chemical company pick up his chemistry "waste."

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	10-20-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Walked site with Craig Wetherbee and Mike Morris-Director Maintenance Operations/Grounds. Valley Fire destroyed the hazmat storage building in September 2015. The school has just finished rebuilding it, but waiting for building final. No hazmat currently onsite. Mr. Morris advised it may be some time before reportable quantities are onsite (if ever). Any waste generated (such as minor waste oil) is taken to Bus Yard on Butts Canyon. We advised we would inactivate the site until reportable quantities are again onsite since waste taken to Bus

Comments:	Pursuant to the MOU, DTSC has prepared a Phase I Environmental Assessment for the Redbud Community Hospital Middletown Clinic. The property, currently a vacant lot, is owned by Redbud Community Hospital and is intended for the relocation of their Middletown Medical Clinic. A Phase I Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Northwest Map:	5602180 WHISPERING PINES, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

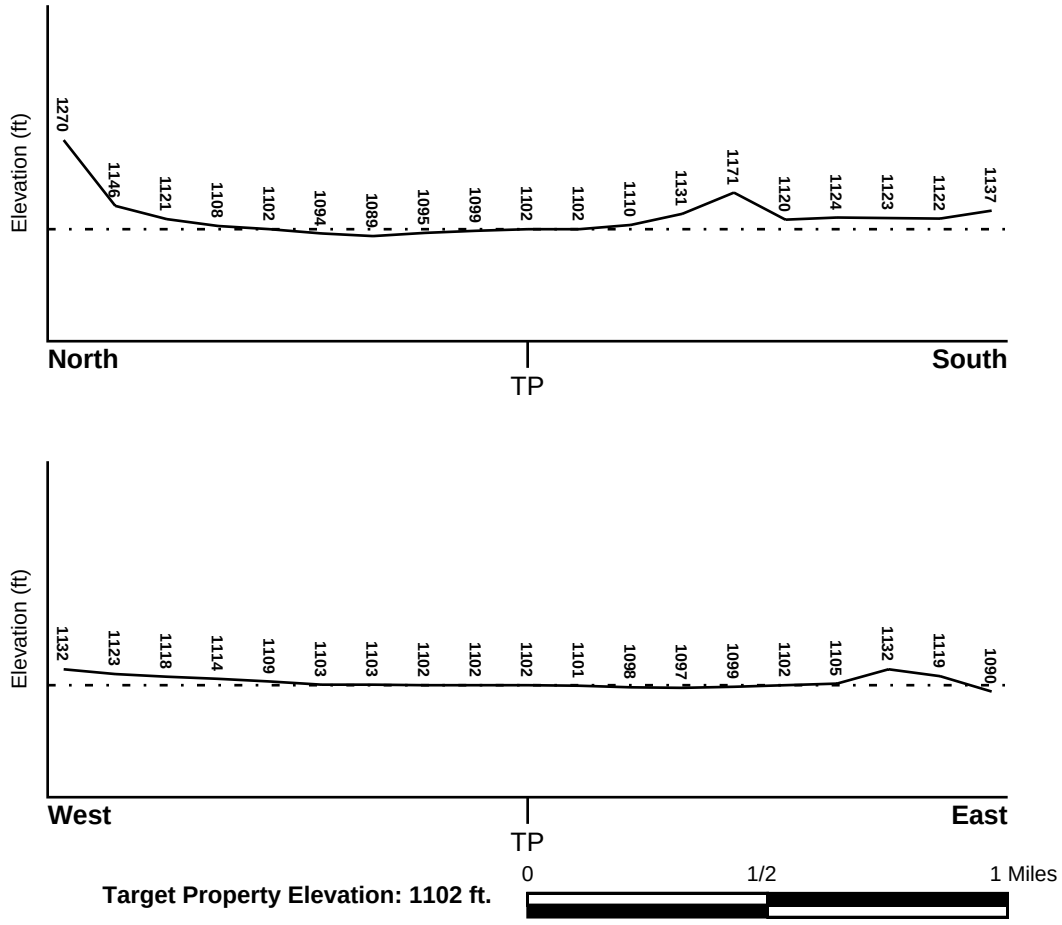
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06033C0863D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06033C0844D	FEMA FIRM Flood data
06097C0200E	FEMA FIRM Flood data
06033C0951D	FEMA FIRM Flood data

06097C0425E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: KELSEY

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches		Not reported	Not reported	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	11 inches	59 inches		Not reported	Not reported	Max: 42 Min: 14	Max: 7.8 Min: 6.1

Soil Map ID: 2

Soil Component Name: TALMAGE

Soil Surface Texture:
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	33 inches		Not reported	Not reported	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	33 inches	70 inches		Not reported	Not reported	Max: 42 Min: 14	Max: 7.8 Min: 6.1

Soil Map ID: 3

Soil Component Name: XEROFLUVENTS

Soil Surface Texture:

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 4

Soil Component Name: RIVERWASH

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Violations:
- Site ID: 14127
- Site Name: Burns Enterprises
- Violation Date: 09-27-2017
- Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
- Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
- Violation Notes: Returned to compliance on 10/24/2017. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words ?Hazardous Waste?; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

WMUDS/SWAT:

Edit Date:	Not reported
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.
Primary Waste:	DRILLS
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Erosion Wastes
Secondary Waste Type:	I
Base Meridian:	Not reported
NPID:	Not reported
Tonnage:	0
Regional Board ID:	Not reported
Municipal Solid Waste:	False
Superorder:	False
Open To Public:	False
Waste List:	False
Agency Type:	Private
Agency Name:	GEOTHERMAL INC.

Comments: Pursuant to the MOU, DTSC has prepared a Phase I Environmental Assessment for the Redbud Community Hospital Middletown Clinic. The property, currently a vacant lot, is owned by Redbud Community Hospital and is intended for the relocation of their Middletown Medical Clinic. A Phase I Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/19/2019
Date Data Arrived at EDR: 07/30/2019
Date Made Active in Reports: 09/03/2019
Number of Days to Update: 35

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/19/2019
Date Data Arrived at EDR: 07/30/2019

Next Scheduled EDR Contact: 01/13/2020
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Data Release Frequency: No Update Planned

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/19/2019

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019
Date Data Arrived at EDR: 04/05/2019
Date Made Active in Reports: 05/14/2019
Number of Days to Update: 39

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/19/2019
Date Data Arrived at EDR: 07/30/2019

Next Scheduled EDR Contact: 10/28/2019
Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

CA ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

CA DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Last EDR Contact: 08/07/2019
Next Scheduled EDR Contact: 11/25/2019
Data Release Frequency: Varies

CA HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2017
Date Data Arrived at EDR: 05/29/2019
Date Made Active in Reports: 07/22/2019

CA WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

CA WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

1.0 INTRODUCTION

1.1 Project Background

The Maha Resort at Guenoc Valley (the "Project") sits on approximately 16,000 acres and is three miles southeast of Middletown on the southeast border of Lake County (Project Site). The Project has applied to the County of Lake for a development application. Pursuant to the California Environmental Quality Act ("CEQA") the application will include an Environmental Impact Report ("EIR"). The EIR will include a programmatic analysis (the "Programmatic Review") of the impacts to rezone the 16,000-acre Guenoc Ranch to "Guenoc Valley District ("GVD")." In addition to the programmatic level EIR to allow the rezone, the EIR will include a detailed, Project level analysis (the "Project Level Review") of the impacts at a Project level of the proposed first phase of development ("First Phase"), submitted as the Specific Plan of Development ("SPOD").

The Programmatic Review of the overall Project will occur in the EIR to assess the environmental impacts of the entire Project Proposal. Project Level Review will analyze the specific objectives and environmental impacts of the proposed first phase, as outlined in the SPOD. The Project Level Review EIR will analyze the environmental changes caused by a development including the construction and operation, whereas the Programmatic Review EIR will look at the impacts of the rezone classification rather than a Project specific analysis. Future phases of development ("Future Phases") will require additional CEQA review. Therefore, this technical feasibility analysis is broken into two sections, the first section includes the First Phase Project level impacts and the second section analyzes the potential development within the new zoning classification GVD. Construction and operations impacts are analyzed in a separate report.

The Project requests a general plan amendment and a rezone classification in separate phases. For a breakdown of the development intentions between the Project's First Phase SPOD and Future Phases for allowed uses please see the following table with data obtained from the Notice of Preparation.[1]

Table 1: Unit Breakdown as per GVD Zoning Permitted Use Table[2]

Use	First Phase (qty)	Future Phases (qty)
Hotel Units	225	155
Resort Residential	144	260
Residential Estate Villa	411	989
Workforce Co-Housing Bedrooms	300	200

[1] http://www.lakecountyca.gov/Government/Directory/Community_Development/Planning/GuenocValley.htm Notice of Preparation dated April 23, 2019, Table 1, Primary Permitted Uses, accessed 7/8/2019.

[2] This report is analyzing the total allowable development; therefore, it is conservative as it analyzes a greater density than is proposed in the SPOD.

First Phase of Project: The First Phase of the Project includes the construction of the roads and the utility infrastructure, approximately 225 hotel rooms, 144 resort residential units, and 411 residential villas, 300 workforce and staff housing, and the accessory to resort commercial structures. The section of the report that discusses the electrical system feasibility of the First Phase analyzes the electrical system feasibility of the First Phase of the development as identified in the SPOD.

Future Phases of Project: The Future Phases of the Project, to the extent allowed as part of the GVD, includes up to 155 hotel rooms, 260 resort residential units, 989 residential estate villas, 200 workforce co-housing bedrooms, and accessory to resort commercial structures. Any development proposed as part of the Future Phases will require additional CEQA review. The section of the report that discusses the electrical system feasibility of Future Phases analyzes the electrical system feasibility of the Future Phases of the development as identified in the proposed GVD.

1.2 Technical Assistance Overview

Our technical feasibility study analyzes the electrical system infrastructure options for the Project. In completing this study, our goal was to provide current and accurate information on the best methodology and approaches to developing the electrical infrastructure for the Project, including options for utility services, generation technologies, distribution strategies and demand needs with a focus on complying with all applicable energy codes and providing a safe, resilient electrical infrastructure system for the Project.

This report summarizes our work tasks completed for this Project, and provides options for next steps towards development of the Project's electrical infrastructure. First, we provide our assessment of the Project's existing on-site electrical infrastructure, including the existing demand needs and electrical distribution system that serves the 16,000 acre property. Second, we broke our study into two parts to analyze the Project's electrical infrastructure needs for the First Phase and Future Phases of the Project. For the First Phase, we first provide a set of Project design issues that must be addressed at the Project, and then, we provide four options for the Project's electrical distribution services. The first distribution option, referred to herein as "Option 1," is full electric distribution service by Pacific Gas and Electric Company ("PG&E"). The second distribution option, referred to herein as "Option 2," is private ownership of electric distribution service to all commercial properties and infrastructure and PG&E electric distribution services to all residential lots. The third distribution option, referred to as "Option 3," is the option to create a "Public Utility District"[3] with the entire Project operated as an independent microgrid from PG&E. Community shared solar electric generation and battery storage systems[4] are presented in this report as an

[3] https://calafco.org/sites/default/files/documents/2016%20Formation%20Guide%20WEB.PDF, accessed 7/8/2019.
[4] https://ww2.energy.ca.gov/2018publications/CEC-400-2018-020/CEC-400-2018-020-CMF.pdf, page 42 accessed 7/25, 2019.

option to be considered in lieu of or in addition to roof mounted solar systems for the residential lots. Finally, a fourth option, referred to as "Option 4," is a hybrid of Options 2 and 3. Under this option, several privately owned solar plus storage micro-grids would be created to sell the electricity generated from those systems to the commercial lessors at the Project through traditional Power Purchase Agreements ("PPAs") until the formation of the Public Utility District is completed. Throughout this report in general, and specifically in discussing these Options in more detail in section 3.1.2, reference to Maha or the Developer will refer to either Maha or a third party independent power producer ("IPP") selected by Maha, where the IPP, rather than Maha, will create the Public Utility District and/or perform the power generation, delivery and distribution functions described in section 3.1.2, and elsewhere in this report.[5]

2.0 EXISTING POWER NEEDS & LOAD ANALYSIS

2.1 Existing Electrical Services & Infrastructure[6]

The First Phase of the Project's development area is made of 48 contiguous parcels all within Lake County. Electricity is a currently provided to the development area by PG&E from its substation in Middletown. There are two PG&E distribution circuits that provide overhead electricity to eleven (11) existing service points.[7] The existing electrical infrastructure located at the Project consists of service points, easements, distribution circuits, meters, poles and related infrastructure owned and operated by PG&E.

The existing service points include agricultural wells, pump stations and commercial structures served via overhead power lines that run through the Project. Power density is residential, low density rural residential.

The existing circuits that serve the Project are presented in the table below. Circuit 1102 enters the Project from the north and Circuit 1103 enters the Project from the west along Butts Canyon Road. Both circuits appear to merge at the north entry point enabling the circuits to back each other up via emergency switching procedures by PG&E.

[5] Maha is a real estate developer of resort, commercial and residential properties. It is actively reviewing the options that are the subject of this Report in order to provide a comprehensive electric infrastructure for the Project. Maha does not intend to become an electric utility subject to CPUC regulation, and will only perform such power supply and distribution services if it secures an appropriate ruling from the CPUC that such functions will not subject it to regulation as an electric utility under applicable California law. Otherwise, Maha intends to engage one or more IPPs and/or other third-party developer(s) with experience in solar power production, delivery and distribution, energy storage, micro-grids and/or Public Utility Districts, as applicable, to perform such functions for the Project.

[7] https://www.pge.com/b2b/energysupply/wholesaleelectricsuppliersolicitation/PVRFO/PVRAMMap/index.shtml, accessed 6/24/2019.

Table 2: Existing PG&E Circuits

Circuit	Transformer size (MVA)	Transformer demand (MVA)	Circuit Capacity (MVA)	Circuit Peak (MVA)
1102	19.20	9.54	12.19	9.72
1103	19.73	5.5	12.19	1.20

The existing PG&E services and infrastructure located on the Project's development area are as shown in Figure 1 below.

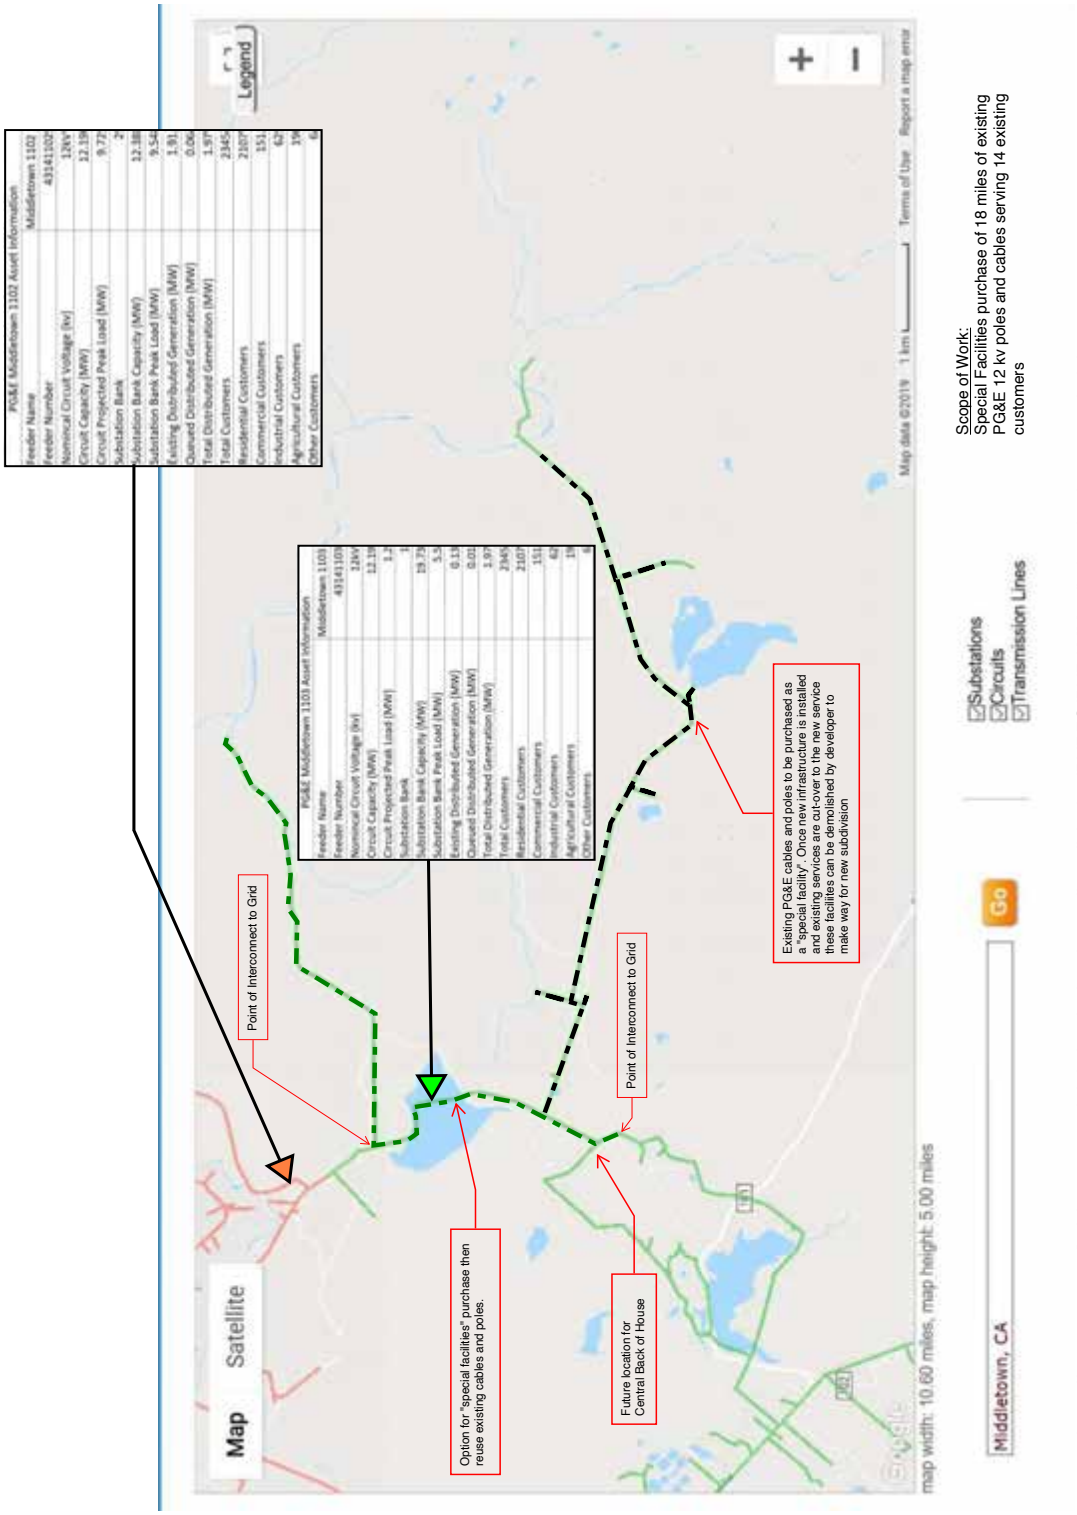

Figure 1. Existing PG&E Services

The existing electrical infrastructure on the Project's development area is all overhead.

2.2 Existing Energy Usage & Demands

The existing circuits serve a mix of customers as presented in Table 3 below.

Table 3: Existing PG&E Customers

Description	1102 circuit	1103 circuit
Residential Customers	2,107	104
Commercial Customers	151	27
Industrial Customers	62	5
Agricultural Customers	19	22
Other Customers	6	0
Total Customers	2,345	158

Based on publicly available PG&E data, Circuit 1103 has an approximate power density of 11 kva/Sq mile with existing energy use on the circuit estimated to be 266 MWh/year based on an average annual energy demand throughout the year of 30 KW. Circuit 1103 only services the Project Site and Circuit 1102 serves areas outside the Project Site. Circuit 1102 has a power density of approximately 900 kva/Sq mile with existing energy use on the circuit estimated to be 30,000 MWh/yr based on an average annual energy demand of 1 KW for each residence and 5.5 KW for each commercial, industrial, agricultural and other customer in the service area.

3 TECHNICAL FEASIBILITY OF ELECTRICAL SERVICE FOR PROJECT

3.1. Electrical Service Infrastructure for First Phase

3.1.1. Project Design Features

For the First Phase, the Project will reuse portions of the existing overhead utility services and provide new services throughout the Project, as required. The electrical infrastructure at the Project will change from all overhead distribution service to a mix of overhead and underground service where required in subdivisions and where necessary to maintain the aesthetic and fire prevention goals of the Project. Approximately 18 miles of existing PG&E 12 KV circuit will either be removed, reused or relocated. The Project proposes the installation of approximately 32 miles of new joint trench and underground electrical infrastructure in the Project's proposed subdivisions. Almost all of the Project's electrical utility routing will be installed with an underground joint trench alongside communications, and in some areas above ground routing may be utilized if aesthetically viable and not adjacent to flammable vegetation. All infrastructure is proposed within existing road corridors and the improvements will occur within the Project Site.

The Project proposes the installation of distributed energy resources[8] combined as an interconnected system of loads and resources, including, but not limited to, distributed energy resources, energy storage, demand response tools or other management, forecasting and analytical tool that can be managed and isolated to withstand larger disturbances and maintain electrical supply to connected critical infrastructure. A key feature of the Project's electrical infrastructure is to ensure the Project's microgrid and resiliency strategies support reliability in anticipation of potential outage events and wildfires.

The building design for facilities in the Primary Permitted Uses Table[9] will meet energy code requirements and endeavor to target between 18 kbtu/sf-yr for ground coupled heat pumps to 30 kbtu/sf-yr to minimize the demands on the systems.

For the most part infrastructure will largely be installed underground in the subdivisions and resort properties with design features that reflect the vision of the Project exceeding minimum safety and efficiency.

As required by California law, the Project will include either the installation of PV solar for every residential structure's needs either on the rooftops or through ground-mounted community solar systems. The installation of energy storage devices, with a range of battery types is being considered, at every location where PV solar is installed. Eleven existing PG&E service points currently exist that can be utilized for development of the electrical infrastructure at the Project. The relocation of existing PG&E easements and poles is expected.

Electrical needs for services that are directly located on Butts Canyon Road such as entrance features, streetlights or any developments proposed adjacent to Butts Canyon Road will be individual service delivery points[10] off the PG&E system. For these individual areas any solar systems would either be roof or ground mounted and interconnected at the Service Delivery Points.

Substations and points of interconnect to PG&E will be determined by the Distribution Option selected in section 3.1.2 below. Electrical infrastructure will be routed in or along existing and/or newly developed roadways.

The following tables identifies the infrastructure systems that are part of the First Phase energy usage and demand analysis.

---

[8] "Distributed energy resource" means an electrical generation or storage technology that complies with the emissions standards adopted by the State Air Resource Board pursuant to the distributed generation certification program requirements of Section 94203 of Title 17 of the California Code of Regulations, or any successor regulation.

Table 4: First Phase Infrastructure Systems

Quantity	Description
24	Wastewater Treatment Facilities with back-up generators[11]
16	Water Systems with back-up generators[12]
3	Main Point of Entry to IT Carriers with back-up generators[13]
11	IT Area Distribution Facilities with back-up generators
4	Cellular/Radio Towers with back-up generators
1	Emergency Communication Systems
1	Centralized Fire Camera System
1	Centralized Alert (Nixle) System
9	Water Features and pools at 9 locations
500	Streetlight and pathway lighting
384	Public Area EV Chargers

3.1.2. Distribution Options

In addition to the Project design features described above, four options to meet the distribution requirements for First Phase of the Project are described in this section of the report and summarized in the table below[14].

Table 5: Summary of Options

Description	Distribution	Service Extensions	Responsible Party
Option 1	PG&E	PG&E	PG&E
Option 2	PG&E and Maha	PG&E and Maha	PG&E and Maha
Option 3	PG&E and Maha	Maha	PG&E and Maha
Option 4	PG&E and Maha	Maha	PG&E and Maha

Option 1

In this option, the Project's current utility provider, PG&E, would provide the

[12] http://www.lakecountyca.gov/Assets/Departments/CDD/Planning/Docs/Guenoc/Maha+SPOD.pdf, page 113 Water Management Areas, accessed 7/8/2019.
[13] http://www.lakecountyca.gov/Assets/Departments/CDD/Planning/Docs/Guenoc/Maha+SPOD.pdf, page 141 Communications Proposed IT Network, accessed 7/8/2019.

[14] *See* p. 5, note 5, clarifying that references to functions to be performed by Maha in this section 3.1.2 may be performed by an IPP selected by Maha to perform the solar generation, delivery and distributions functions referenced in this Report.

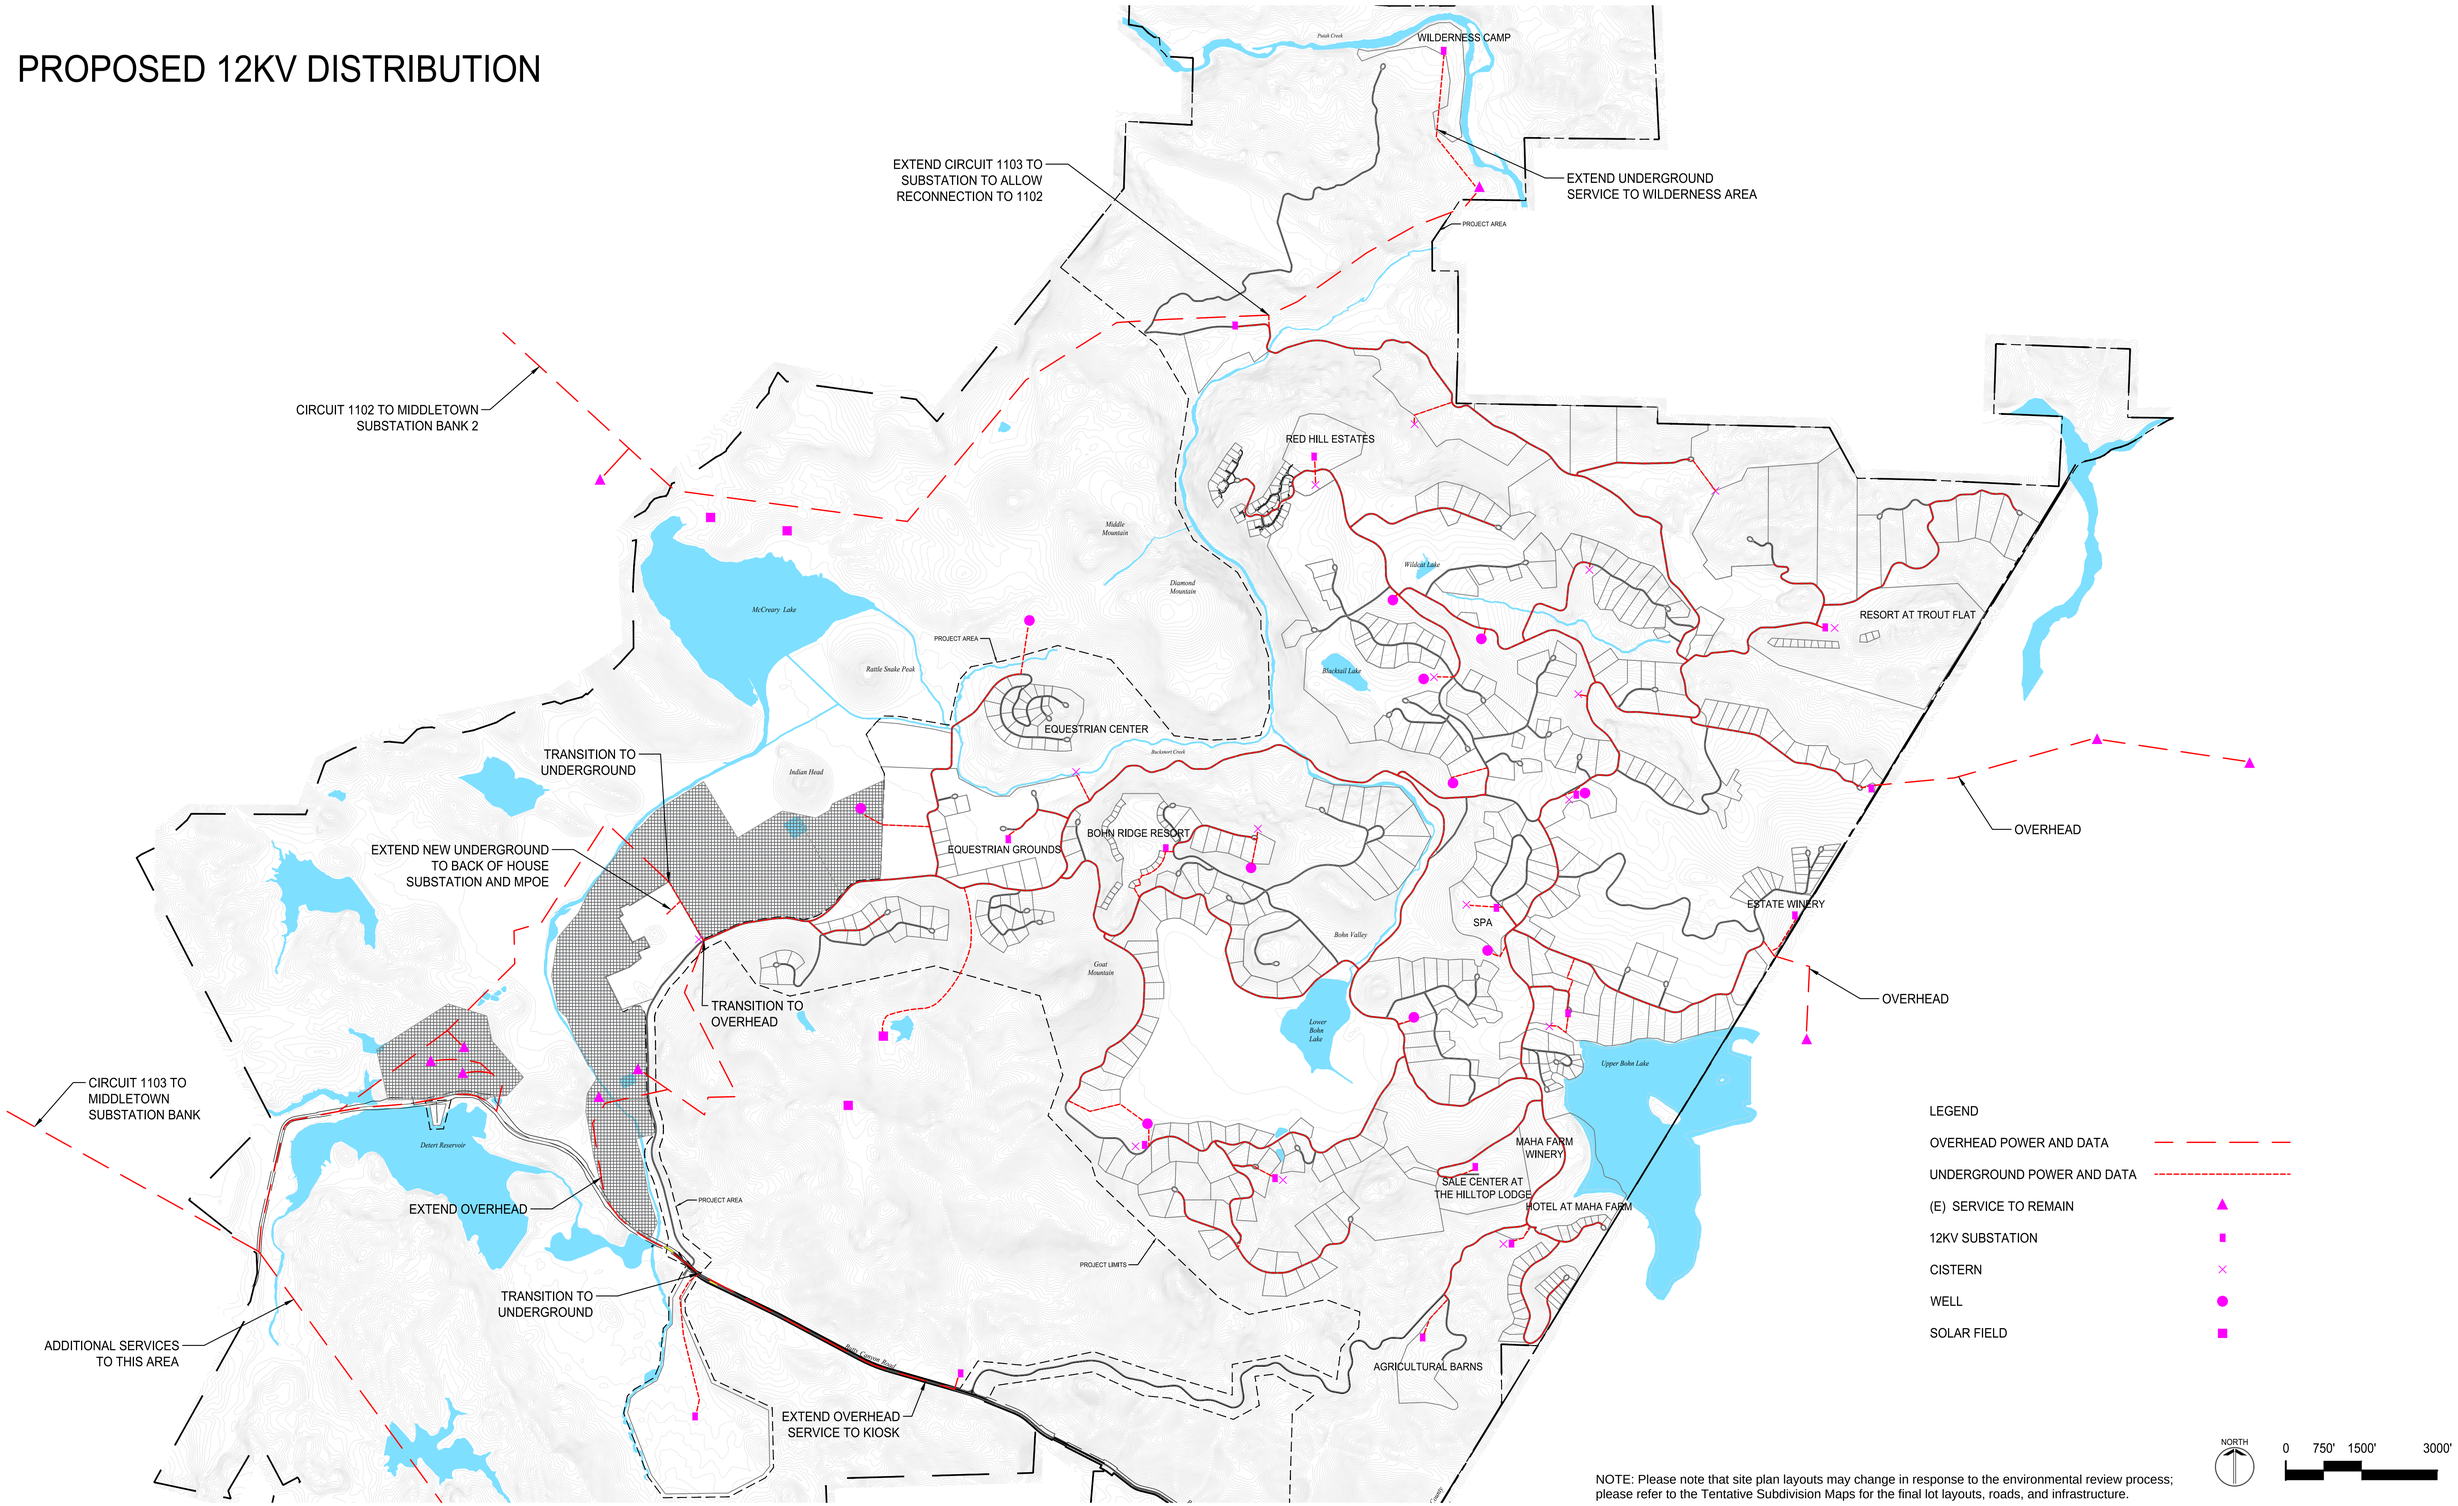
electrical distribution services (metering, distribution, etc.) to all facilities at the Project as shown in the Figure 2 on the following page.

PG&E would be responsible for Distribution Line[15] and Service Extensions[16] from their PG&E facilities both on and off the Project. PG&E will provide all electrical services, including distribution, lines, metering and supply to serve the proposed resort facilities, accessory infrastructure and residential lots. In this option, all PG&E facilities will run within public utility easements that extends 25' out on both sides and from the center of each roadway.

All commercial properties at the Project would be built "Solar Ready" pursuant to applicable California energy code.[17] Each residential structure would be either provided with rooftop solar or the ability to participate in alternative energy developments that would interconnect into the PG&E systems electrical facilities in the vicinity of the Back of House and at the location of the existing overhead service north of McCreary Lake where the PG&E circuit passes through the lake. Alternative energy developments would consist of ground mounted solar arrays coupled with electrical combiner boxes, utility scale inverters, transformers and switchboards with metering, monitoring and relaying as required by PG&E.

[15] https://www.pge.com/tariffs/assets/pdf/tariffbook/ELEC_RULES_15.pdf, accessed 7/8/2019.
[16] https://www.pge.com/tariffs/tm2/pdf/ELEC_RULES_16.pdf, accessed 7/8/2019.
[17] Pursuant to Section 110.10 of the 2019 California Energy Code, California law contains certain mandatory requirements for "solar ready" non-residential buildings that include minimum solar zone areas and other requirements.

PROPOSED 12KV DISTRIBUTION



NOTE: Please note that site plan layouts may change in response to the environmental review process; please refer to the Tentative Subdivision Maps for the final lot layouts, roads, and infrastructure.

In this option, the Project's current utility provider, PG&E, would provide the electrical distribution services (metering, distribution, etc.) to all residential structures at the Project as in Option 1. PG&E would provide Distribution Line and Service Extensions to serve all residential lots at the Project.

For the commercial and other accessory features at the Project, PG&E would only provide a single delivery point to the Project at the service entrance designated as "Back of House." From this point, the developer of the Project ("Developer") would construct, own and operate new meters and distribution lines to each of the 12 commercial facilities at the Project and to each of the 57 other resort accessory features consisting of water wells, waste water treatment plants, cell towers and IT features. This option would allow for the Developer to own and operate "behind the meter" solar plus storage microgrids for all commercial and resort accessory features. Four locations at the Project have been identified as available for ground mounted solar plus storage systems. (See Section 3.1.5 below.) The independent micro-grids could function independent of PG&E, and could also still utilize PG&E as backup, energy storage, emergency services, and/or any other grid-tied services desired per the final Project's design.

Electrical facilities would be established for the purpose of undergrounding, metering and control at Back of House. This location would be a Service Delivery Point[18] for the Developer owned electrical facilities that could potentially include medium voltage switches, metering facilities and or a transformer and line-up of switchgear and associated overhead and underground utility infrastructure. These facilities would serve the commercial aspects of the GVD. In this option the Emergency Response Center would also be established as a Developer owned electrical facility for the purpose of metering and control of power to the commercial aspects at the Project.

From the electrical facilities, new circuits would be dedicated to serve infrastructure loads such as water wells, wastewater treatment facilities, cellular towers and similar facilities. Separate circuits that provide power to the individual Project commercial facilities. In this option back-up power would also be provided at each of the (2) main electrical facilities and provisions to load shed infrastructure circuits would be added to enable prolonged operation of the commercial facilities and infrastructure independent of PG&E. Operation and maintenance of the privately held electrical infrastructure would be by contractors hired through the Project.

Similar to Option 1, each residential structure at the Project would either be provided with rooftop solar or the ability to participate in alternative energy developments that

[18] https://www.pge.com/tariffs/assets/pdf/tariffbook/ELEC_RULES_2.pdf, accessed 7/8/2019.

would interconnect into the PG&E systems electrical facilities in the vicinity of the Back of House area of the development, and or at the location of the existing overhead service north of McCreary Lake where the PG&E circuit passes through the Lake. Alternative energy developments would consist of ground mounted solar arrays coupled with electrical combiner boxes, utility scale inverters, transformers and switchboards with metering, monitoring and relaying as required by PG&E.

Option 3

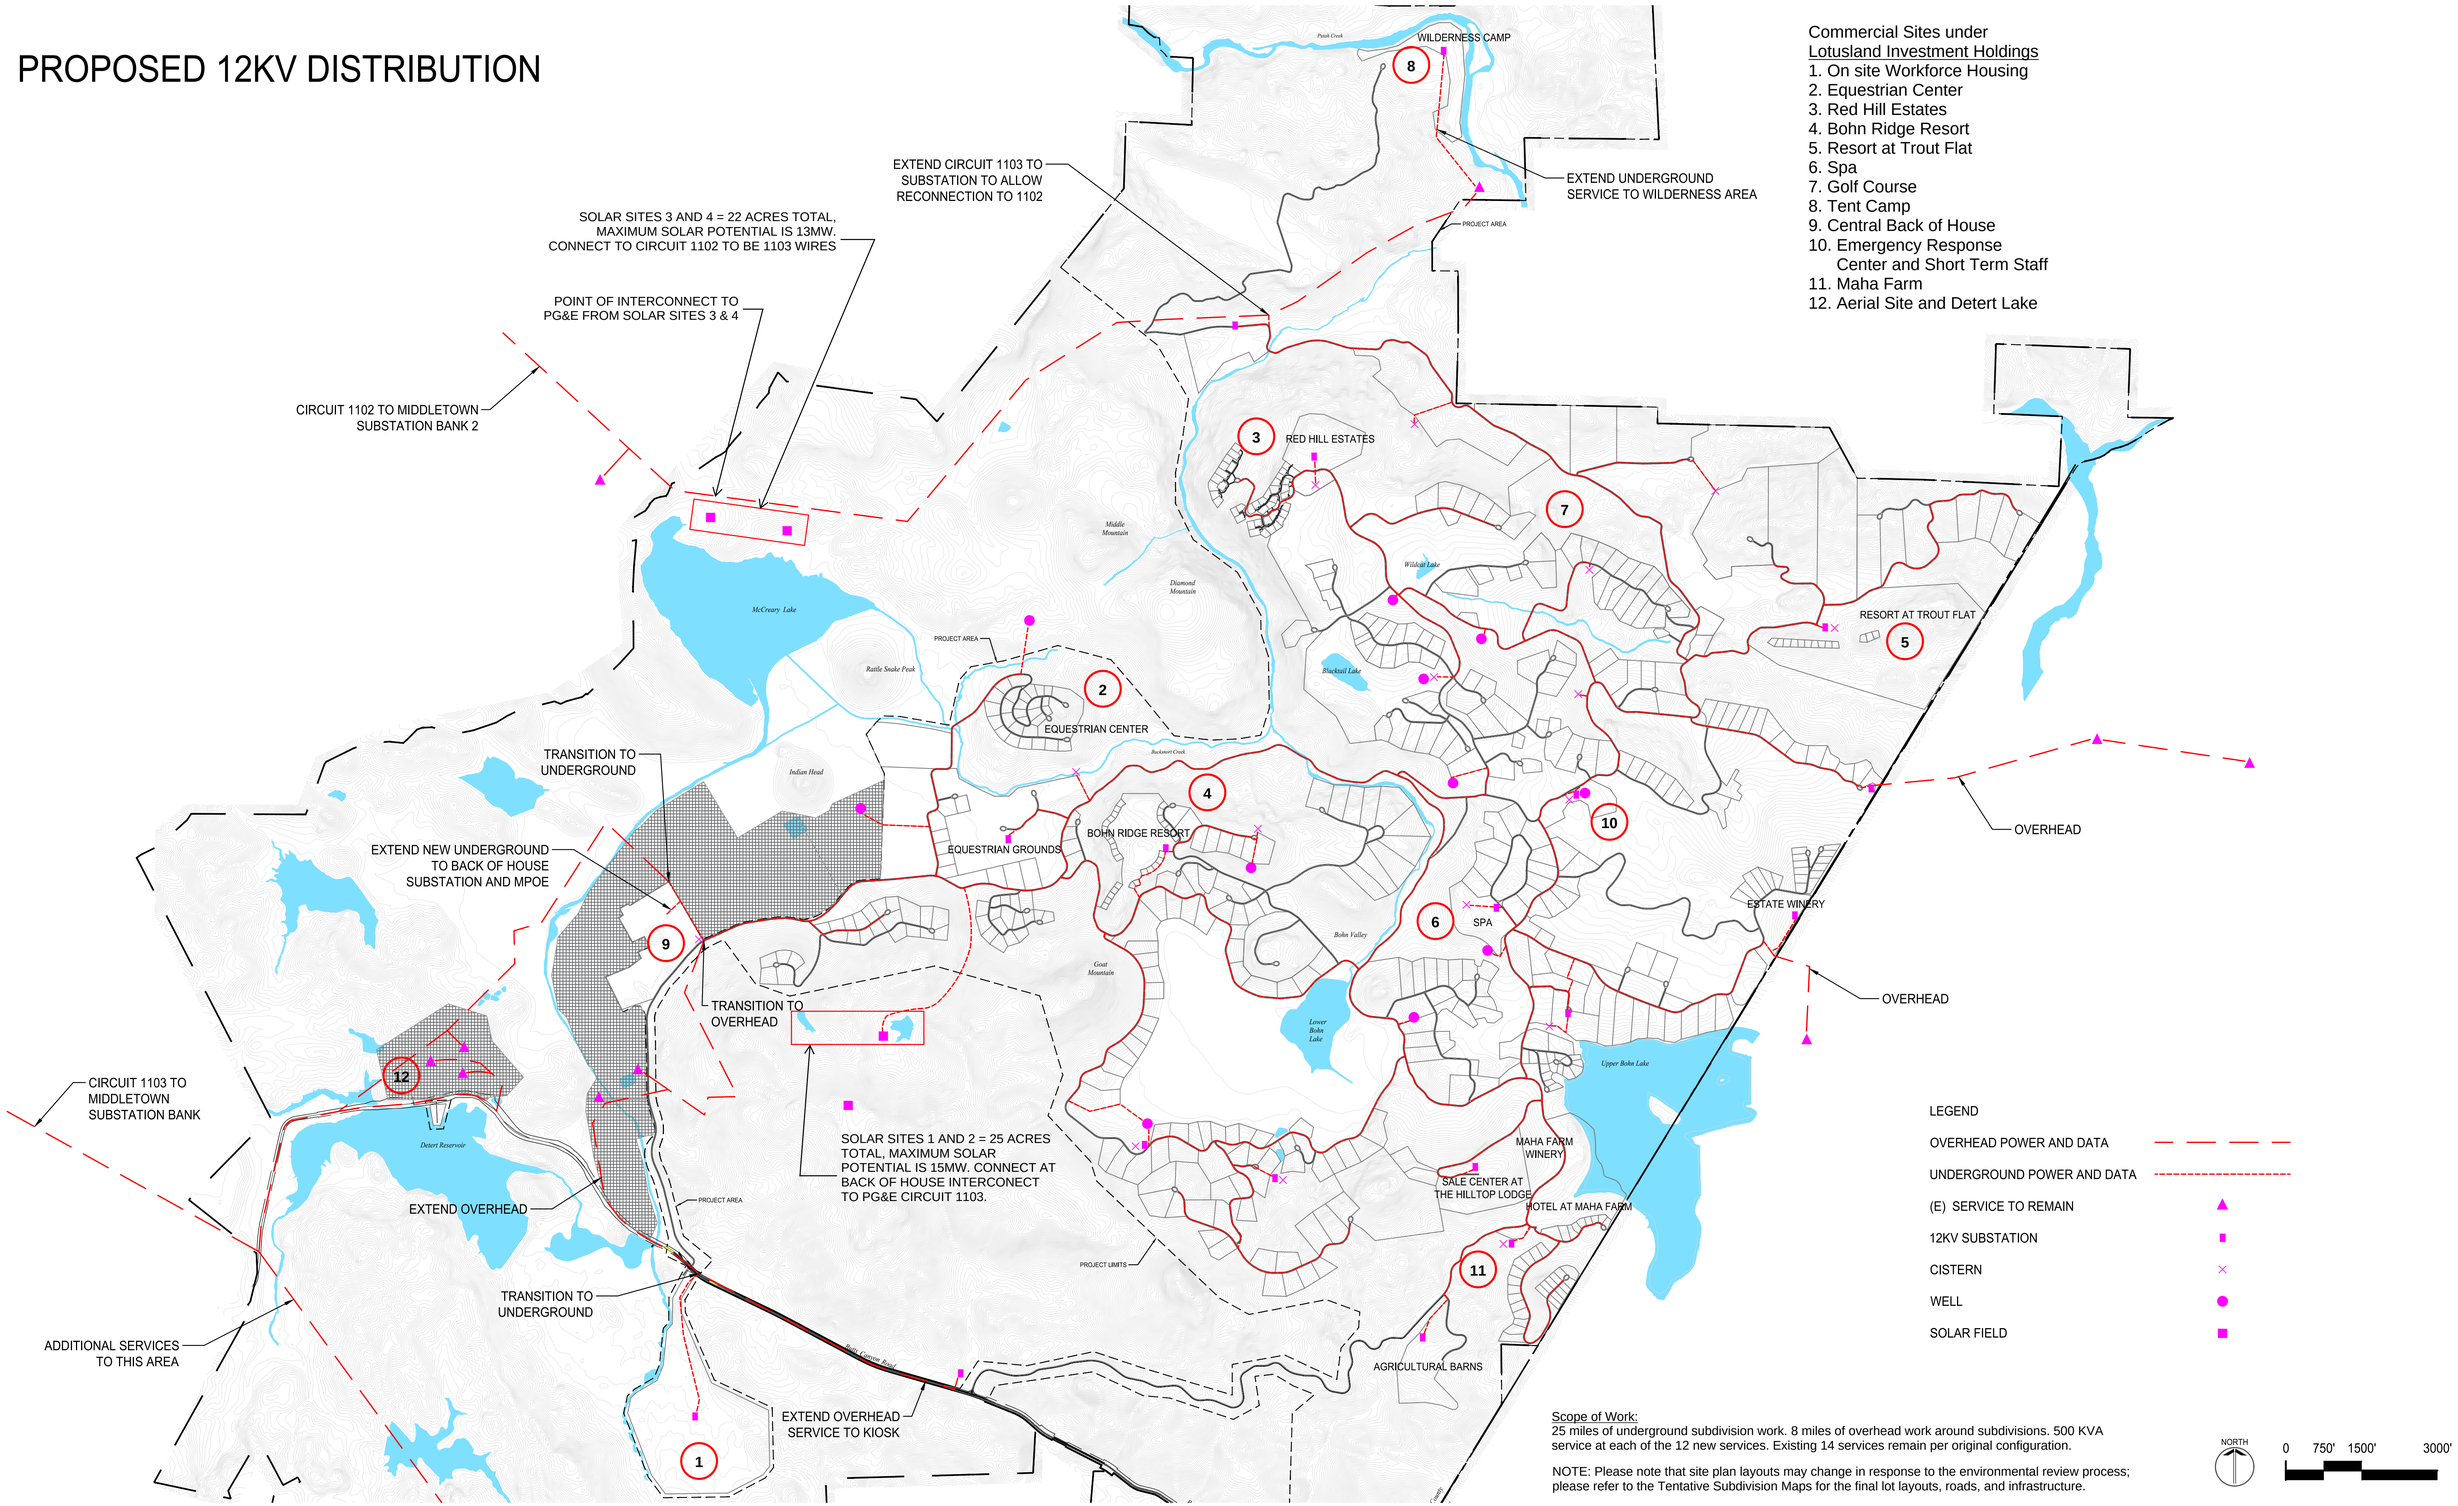
In this option, the Developer would create a "Public Utility District"[19] that would supply power, own all of the electrical infrastructure and provide related services to all of the residential, commercial and accessory buildings and features at the Project. This option includes behind the meter solar for commercial facilities at the central solar locations to enable community solar and community storage to meet the Project's aesthetic goal related to no solar on roofs. Between one to four ground mounted solar plus storage solar systems would be located at the Project, which collectively could generate enough electric supply for the Project's entire energy needs. Similar to Option 2, PG&E would provide a single delivery point to the Project at the service entrance designated as "Back of House."

The Project would establish all services from PG&E at Back of House. PG&E would be responsible for the Distribution Line Extensions up to this point. The Service Delivery Points within The Project would be by the Public Utility District created for that purpose. Like Option 2 the Emergency Response Center would be established as a Developer owned electrical facility for the purpose of metering and control of power to the common ownership facilities within The Project site.

In this option each residential structure would either be provided with rooftop solar or the ability to participate in alternative energy developments that would interconnect into the PG&E systems electrical facilities in the vicinity of the Back of House and at the location of the existing overhead service north of McCreary Lake where the PG&E circuit passes through the lake. Alternative energy developments would consist of ground mounted solar arrays coupled with electrical combiner boxes, utility scale inverters, transformers and switchboards with metering, monitoring and relaying as required by PG&E.

[19] https://calafco.org/sites/default/files/documents/2016%20Formation%20Guide%20WEB.PDF, accessed 7/8/2019.

PROPOSED 12KV DISTRIBUTION



Scope of Work:
25 miles of underground subdivision work. 8 miles of overhead work around subdivisions. 500 KVA service at each of the 12 new services. Existing 14 services remain per original configuration.

NOTE: Please note that site plan layouts may change in response to the environmental review process; please refer to the Tentative Subdivision Maps for the final lot layouts, roads, and infrastructure.

Option 4

This option would provide for a hybrid of Options 2 and 3, wherein Developer would create and own solar plus storage micro-grids that would be constructed for all or certain commercial structures at the Project similar to Option 2. PG&E would service all residential lots at the Project. All commercial facilities served by the privately owned micro-grids would be serviced through traditional solar Power Purchase Agreements ("PPAs") until the formation of the Public Utility District is completed. Under this option, the Project's electrical infrastructure would begin, at least in certain areas of the Project, while the extensive formation processes related to setting up a Public Utility District is accomplished. Option 4 would provide for a phased approach to the development of the Project's distribution infrastructure and include the potential sale of the solar plus storage systems to the Public Utility District at a later date, if desired.

3.1.3. Potential Electrical Infrastructure Improvements

Both on-site and off-site improvements to the existing electrical infrastructure at the Project might be required. Currently, the existing electrical infrastructure at the Project can accommodate up to 12.19 MW of circuit capacity and 19.73 MW of transformer capacity. (See Table 2 above.) These circuit and transformer capacities limit the amount of alternative energy that the existing electrical infrastructure can accommodate. Thus, regardless of the distribution option selected above, both on-site and off-site improvements to the electrical infrastructure will be required if these "allowances" of the existing electrical infrastructure are exceeded.

In order to accommodate increased circuit and transformer capacities, both on-site and off-site infrastructure improvements would be required, as follows: i) a new Trip Transfer Scheme[20] would be required to enable PG&E to remotely turn off power flow from the Project to the utility for the purpose of ensuring safe working conditions for PG&E employees and contractors working on their equipment; (ii) transformer upgrades could be required; and (iii) potential switchboard improvements could be required to accommodate the increased capacity. The potential off-site improvements could include infrastructure improvements, as follows: (i) a potential replacement of the existing PG&E transformer located at PG&E's facility in Middletown to make it larger so that it can accommodate the increased capacity as a result of the Project; and (ii) a potential replacement of the existing overhead lines with new lines that can accommodate the increased capacity. The existing overhead service that could be upgraded runs along Butts Canyon Road and within easements adjacent to the road.

[20] https://peguru.com/2011/04/direct-transfer-trip-scheme/#targetText=Direct%20Transfer%20Trip%20Scheme,is%20assigned%20to%20each%20event.

Any distribution options that include virtual net metering and net energy metering as part of the electrical infrastructure design will require new service requests for Net Energy Metering ("NEM") and/or RES-BCT[21] developments and on-site wire and control upgrades to the applicable areas of the Project's development area as further described in Section 3.1.6 below.

The Developer will be required to work through the PG&E interconnection process to increase capacity to the grid, including the on-site and off-site improvements described above, as applicable, if the alternative energy design requires any of the above on-site or off-site improvements to the existing electrical infrastructure.

3.1.4. Acquisition and/or Reuse of Existing PG&E Easements & Property

Regardless of which distribution option is selected for the Project, certain rights to utilize, re-use and/or purchase existing PG&E easements and property located at the Project will need to be acquired. Several legal processes exist to accomplish this goal, depending on the distribution option elected.

Advice Letter Process (Options 1, 2 or 4)

In the event that Developer elects to pursue either of proposals set forth in Option 1 or 2, (and not form a Public Utility District), then Developer must negotiate with PG&E to purchase, terminate and/or use any PG&E easements and/or property, as desired. Subject to agreed terms being reached, then PG&E would need to file an advice letter or formal application to obtain advance California Public Utilities Commission ("CPUC") approval or file an application to request exemption of the transaction from Section 851 pursuant to Section 853(b). For instance, any such transactions for property of PG&E considered "necessary or useful in the provision of services to the public" require the consent of the CPUC. An exception for minor uses of utility property exempt from CEQA exists that do not require CPUC approval, but it is a factual determination as to whether this exception is met.[22] To obtain CPUC consent for all uses that do not meet the limited use exception requires either a formal application and order from the CPUC or following the utility advice letter procedure.

[21] https://www.pge.com/en_US/for-our-business-partners/interconnection-renewables/export-power/distributed-generation-handbook/net-energy-metering/res-bct-program.page.

[22] GO 69-C provides in pertinent part that " …public utilities covered by the provisions of section 851…are hereby authorized to grant easements, licenses or permits for use or occupancy on, over or under any portion of the operative property of said utilities for rights of way, private roads, agricultural purposes, or other limited uses of their several properties without further special authorization by this Commission whenever it shall appear that the exercise of such easement, license or permit will not interfere with the operations, practices and services of such public utilities to and for their several patrons or customers."

Pursuant to California Public Utilities Code Section 851, PG&E can sell, lease, assign, mortgage, or otherwise dispose of, or encumber the whole or any part of its properties if it received CPUC approval, which shall be obtained either through securing an order from the CPUC for transactions valued at five million dollars ($5,000,000) or more or through the advice letter procedure for transactions valued at five million dollars ($5,000,000) or less. The CPUC determines the types of transactions valued at five million dollars ($5,000,000) or less that qualify for advice letter handling. For a qualified transactions valued at five million dollars ($5,000,000) or less, the CPUC may designate a procedure different than the advice letter procedure if it determines that the transaction warrants a more comprehensive review. Absent protest or incomplete documentation, the CPUC must approve or deny the advice letter within 120 days of its filing by PG&E. It should be noted that although the CPUC has 120 days to assess whether a particular transaction is adverse to the public interest, the CPUC's average time for processing a Section 851 advice letter is approximately 90 days. The CPUC must reject any advice letter that seeks to circumvent the five million dollar ($5,000,000) threshold by dividing a single asset with a value of more than five million dollars ($5,000,000), into component parts, each valued at less than five million dollars ($5,000,000). Every sale, lease, assignment, mortgage, disposition, encumbrance, merger, or consolidation made other than in accordance with the advice letter and approval from the CPUC authorizing it is void.

The purpose of the CPUC review is to ensure that the proposed transaction is not adverse to the public interest – e.g., does not impair the ability of the utility to provide for safe and reliable service to customers at reasonable rates. If a transaction does not qualify for the advice letter process, utility transactions involving the transfer or dispositions of interests in property necessary or useful in the provision of services to the public generally require a formal application and a CPUC decision pursuant to Section 851. The advice letter process expedites and simplifies the CPUC's review and approval of non-controversial transactions by filing an advice letter and obtaining a CPUC resolution approving the transaction. Utilities still must file formal applications, rather than advice letters under the following circumstances: (i) to seek approval of transactions that require CEQA review by the CPUC as either a Lead Agency or a Responsible Agency,[23] or (ii) when a transaction will materially impact the ratebase of the utility, even if the transaction is valued at $5 million or less.

Formation of a Public Utility District (Option 3 or 4)

Alternatively, if Developer selects Option 3 or 4, many regulatory requirements would be required to set up the Public Utility District. Once established pursuant to "The Public

[23] Transactions subject to Section 851 which require CEQA review by the CPUC as either the Lead Agency or a Responsible Agency "jurisdictionally triggers" the CPUC's oversight and review responsibilities under CEQA and therefore does not qualify for advice letter treatment pursuant to Section 853(d). When acting as a Responsible Agency, the CPUC has significant duties under CEQA. For example, as a Responsible Agency, the CPUC must review the environmental documents prepared by the Lead Agency and make its own findings regarding whether the transaction will have significant environmental impacts, and whether these impacts can be mitigated. *State CEQA Guidelines Sections 15096(f) and (h)*. The CPUC may also require additional mitigation measures for significant adverse environmental impacts related to aspects of the Project that the CPUC decides to carry out, finance, or approve. *State CEQA Guidelines Section 15096(g).*

Utility District Act" set forth in California Public Utilities Code § 15501 *et seq.* (the "Act"), the Developer could pursue terminating and/or acquiring any existing PG&E easements and facilities located on the Project through the powers of a Public Utility District. The Act allows residents of an unincorporated area to form a public utility district ("PUD") with the powers to establish, purchase, and operate public works to furnish its inhabitants with power and other utility services. The PUD may furnish those services outside its boundaries, but not in another municipality that furnishes the same service without its consent. The laws governing PUDs and their powers are similar to those for Municipal Utility Districts. A PUD has a wide range of powers, including the provision of electric or other utility services, the construction of utility systems, and issuing bonds. In addition, the voters in a PUD can petition the PUD board to acquire utility works or a utility. The PUD must obtain estimates of the cost of original construction of the existing facilities and completion by the PUD of similar facilities. The PUD may ask the CPUC to value existing utility facilities for the purpose of submitting estimates of the cost of acquiring them to the PUD 's voters at an election.

A PUD has a wide range of powers, including the provision of electric or other utility services, the construction of utility systems, and issuing bonds. For instance, PUDs may take by eminent domain any property necessary or convenient to the exercise its powers. Section §16404 of the Act. Additionally, PUDs may acquire, construct, own, operate, control, or use, within or without or partly within and partly without the district, works for supplying its inhabitants with light, water, power, heat, transportation, telephone service, or other means of communication, or means for the disposition of garbage, sewage, or refuse matter, and may do all things necessary or convenient to the full exercise of the powers granted in this article. Section §16461 of the Act. PUDs may also acquire, construct, own, complete, use, and operate a fire department, street lighting system, public parks, public playgrounds, golf courses, public swimming pools, public recreation buildings, buildings to be used for public purposes, and works to provide for the drainage of roads, streets, and public places, including, but not limited to, curbs, gutters, sidewalks, and pavement of streets. For purposes of this division, all of those projects shall be considered a public utility or public utility works. Section §16461 of the Act.

Pursuant to Public Utilities Code Section 1402 et seq.*,* a PUD can petition the CPUC to determine the value of utility property it seeks to acquire. A PUD may file a petition when it intends to (1) acquire public utility property by eminent domain or otherwise or (2) submit to its voters a proposition for such acquisition. The CPUC must give the utility an opportunity to show cause why it should not act on the petition. Otherwise, the CPUC must hold a hearing and determine the just compensation the PUD must pay the utility for the property. Within 20 days after the commission does this, the utility may file a written stipulation agreeing to accept the compensation set by the PUC with the political subdivision's governing body. Upon filing the stipulation, the political subdivision must proceed with all due diligence to provide the funding. When the political subdivision pays the compensation, the utility must provide it with the property deed. If the utility does not file the stipulation within 20 days, the PUD must (1) begin a court action (suit) to take the property or (2) submit a proposition to the voters to do so. The PUD must act within 60 days after the CPUC makes its determination. In the second case, if the voters approve the proposition, the PUD must file an action to take the property within 60 days of the vote

unless the utility and the PUD agree on terms for the acquisition.

The CPUC's finding on just compensation is final and may not be modified, reversed, or reviewed by any state court. If the court where the PUD pursues the condemnation proceeding decides that it has the right to take the utility's property, the court must enter a judgment in favor of the PUD fixing the compensation in the amount set by the CPUC. If the utility spent money on the property after the CPUC made its determination, it can go back to the CPUC within 30 days after the court enters its judgment to increase the compensation. Similarly, the PUD can go to the CPUC in this period if the property's value deteriorated after the CPUC made its original finding to reduce the compensation. The CPUC's decision on the extent to which the compensation should be adjusted is final. If the PUD does not act within 60 days after the CPUC makes its initial determination, the utility can petition the CPUC to determine that (1) the PUD failed to pursue diligently its rights; (2) its finding as to just compensation is no longer in force; and (3) the utility's reasonable expenditures in connection with the proceedings, which in the CPUC's opinion, could be assessed against the PUD.

3.1.5. First Phase Energy Usage and Demands

During the First Phase, the load on the Project's electrical infrastructure will increase over time. The combined impacts of the proposed power density, peak demand and annual energy usage are summarized in the table below. The resulting power density remains in the residential, low density rural area range of 10- 300 kva/Sq mile.

Table 6: Power Density and Usage

Power Density	Power Density (KVA/Sq mile)	Annual Consumption (MWh)	Peak Demand (MW)
Existing	11	266	0.4
Proposed First Phase	114	25,824	3.7
Proposed First Phase Infrastructure	144	4,735	1.1
Proposed Future Phases	269	28,462	4.5
Proposed First Phase and Future Phases	269	59,021	9.7

In response to the threat of wildfires fires started from overhead wires PG&E's Public Safety Power Shutoff Program[24] is in effect. This program shuts off power to customers under certain conditions related to humidity, wind speed, environmental conditions and on the ground observations. PG&E estimates a Public Safety Power Shutoff event to occur several times per year in PG&E's service area. Because the Project has significant areas within CPUC's Fire-Threat Map[25] areas ,it is anticipated the Project will be subject to

[24] https://www.pge.com/en_US/safety/emergency-preparedness/natural-disaster/wildfires/public-safety-power-shutoff-faq.page, accessed 7/8/2019.
[25] https://www.cpuc.ca.gov/FireThreatMaps/, accessed 7/8/2019.

multiple outages through the Fire Season.

For this reason and to support continuous service to the Project, each area of the Project could be provided with a standby generator to provide essential services to the individual resort properties, and infrastructure systems. In Electrical Infrastructure Options 2, 3 and 4, each switchboard will have standby power available in the event of an extended Public Safety Power Shutoff. When power from PG&E is turned off the standby power's control system will sense the loss of voltage and start the standby supply.

3.1.6. Standby Power

All distribution options include the development of standby power to enable prolonged electricity generation during times of limited on-site generation and/or to limit dependency on PG&E sources. The standby power sources could be batteries ("Energy Storage Systems") or generators with on-site fuel storage or a mix of Energy Storage Systems and generators. Potential fuel sources for the generators include diesel, propone, LNG or CNG. The number of generators required, if any, will be dependent on the types and capabilities of any Energy Storage System(s) included in the final design.

The standby power sources would be developed consisting of some level of generator(s) and/or Energy Storage System(s) with paralleling capabilities. Approximately 30,000 gallons of on-site fuel could be required for each generator depending on the quantity of battery storage containers refined in schematic design.

To cover each water and wastewater facility proposed in the SPOD, a potential total of forty 40-HP generators (30 kW), each with 96 hours of fuel storage could be required. These would be emergency generators with Automatic Transfer Switches or a form of Energy Storage System(s). The IT facilities could require a total of eight 125-kW generators (93 HP), and similarly each would require storage of 96 hours of standby fuel.

Since the standby power sources would only be utilized as necessary, the sources would not have set operating hours. All standby power sources would be tested monthly. The units over 50 HP will, by permit, be limited to 60 hours per year for testing not including emergency operations such as during a PG&E Emergency Power Safety Shutdown.

3.1.7. Alternative Energy Resources

A number of areas at the Project have been identified as appropriate for the development of solar energy systems for generation of the Project's energy needs, as indicated in Figure 4 below.

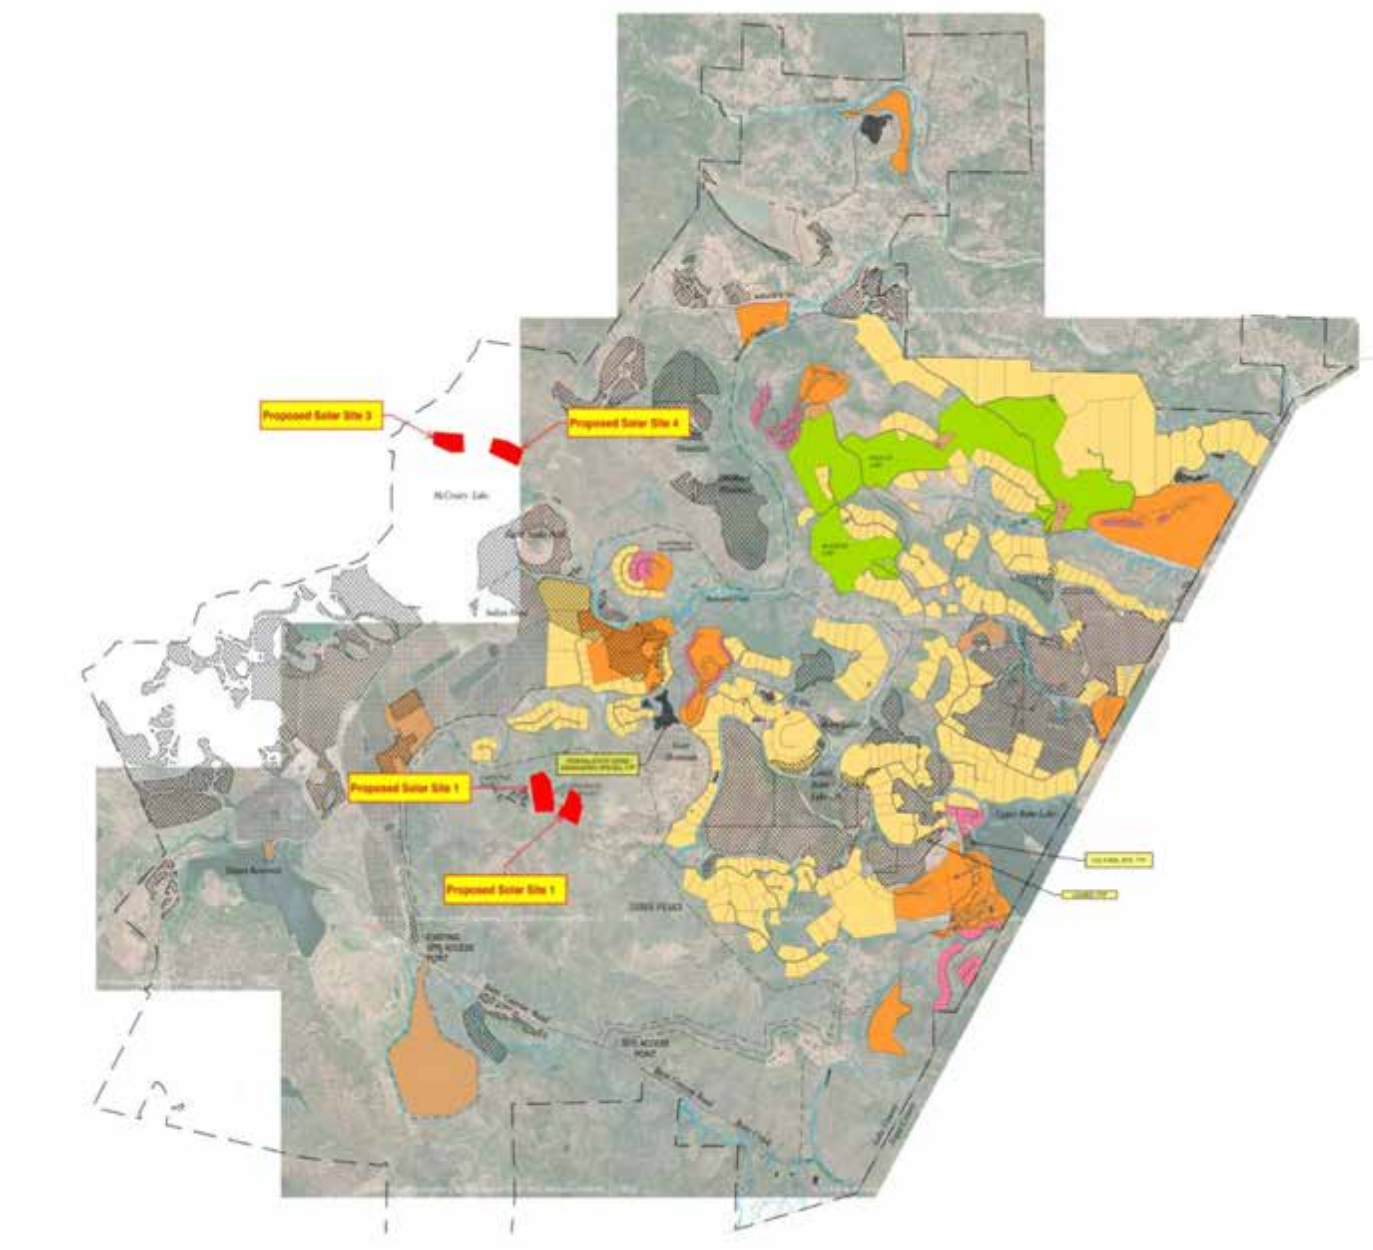


Figure 4. Proposed Solar Sites

Given that California law requires all new residential construction to contain rooftop solar or be provided solar from a community solar system, the development of either rooftop or ground-mounted community solar systems for the residential structures and the applicable contractual requirements related thereto will be a required part of any electrical infrastructure for the Project. Rooftop solar will be integrated into the building architecture as much as possible; in addition, up to four areas within the development area are identified for potential ground mounted solar arrays and associated

equipment.[26]

The maximum size of all ground mounted solar systems that could be built in the Project's development area are as shown in Table 7 below. The selection of the sizes of these ground mounted solar systems will be optimized to meet the needs of the projected energy demands and as the design progresses.

Table 7: Solar Site Maximum Potential

Solar Site	Gross Area (acres)	Maximum Size of Solar Array (MW-AC)
1	15	9
2	10	6
3	10	6
4	11	7
Total	46	28

Battery technology-based Energy Storage Systems will be collocated with the solar fields to optimize discharge and storage of energy. This enables sizing of both the solar arrays and the energy storage such that all energy generated by the solar systems are either used at the instant power is generated or the power is stored in the Energy Storage Systems for use later when the sun has set. Alternate uses of the Energy Storage Systems are to shape the loads, provide grid services, minimize demand and avoid costs that would otherwise be required.

[26] http://www.lakecountyca.gov/Assets/Departments/CDD/Planning/Docs/Guenoc/Maha+SPOD.pdf, page 11 Sustainability Efforts, accessed 7/8/2019.

Figure 5. Solar Sites 1 and 2

The off-site improvements to the electrical infrastructure for these solar systems would require the installation of a Trip Transfer Scheme and include a Panel located at the Middletown Substation, as more fully described in Section 3.1.2 above. A telemetry cable would be required to be installed on existing PG&E poles down Butts Canyon to the point of interconnect. Another utility panel would be required to be installed at the point of interconnect on-site.

On the Project's development area north of McCreary Lake, two ground mounted solar systems could be constructed as shown in Figure 6. Each of the ground mounted solar systems on Solar Sites 3 and 4 could be located on the Project's development area and configured in the manner shown below.

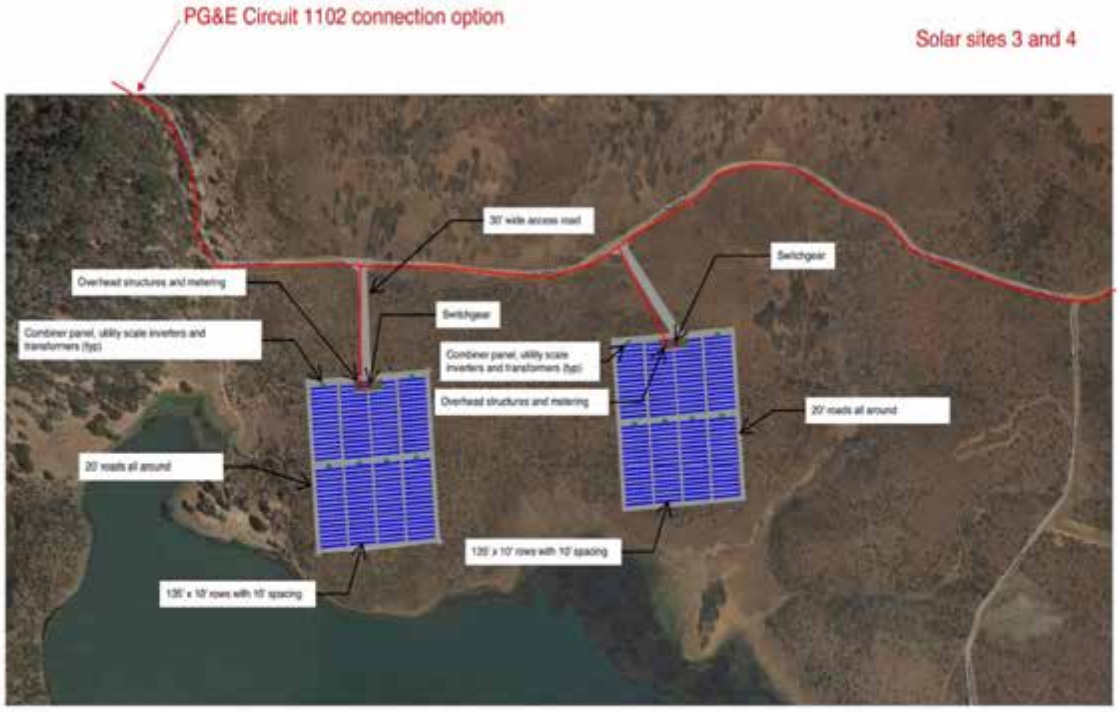

Figure 6. Solar Sites 3 and 4

If Developer elected to maximize the alternative energy resources in the Project's development area, then plans and specifications for approval of the balance of power on all Solar Sites 1 through 4 would add up to the limits of the alternative energy resources of 28 MW as described in Table 7 above. The Developer would be required to work through the PG&E interconnect process to increase capacity of the grid to support any off-site

export from the Project. Additionally, the Developer would be required to work through the CalISO interconnect process to enable power transmission to local utilities, as ultimately desired. The combined work to construct these solar resources would result in modifications to the PG&E infrastructure, as follows: (i) upgrade of the Middletown Transformer to a larger size as shown on Circuit 1103 per Table 2 above; (ii) upgrade electrical buss[27] at Middletown substation to accommodate increased capacity from the Project's solar systems; and (iii) upgrade of the wires on the poles in Butts Canyon per Table 2.

To the extent that Developer elects to construct any alternative energy resources on structures in a manner that relies upon net-energy metering ("NEM") or virtual net energy metering through PG&E, then, new service requests for NEM or RES-BCT developments on Butts Canyon would be required.

3.1.8. Microgrid Operation

A microgrid is a contained energy system capable of balancing captive supply and demand resources to maintain reliability. Microgrids have the following key elements and features:

- Defined by function, not size
- Incorporates multiple distributed technologies
- Maximizes reliability and efficiency
- Can include other utilities – steam, hot water, chilled water, network connectivity
- Can function in "islanded mode" disconnected from larger utility grid

The distribution Options 2, 3 and 4 all include the potential of all or portions of the electrical infrastructure at the Project being developed as alternative energy microgrid(s). Under normal conditions, the on-site micro-grid system(s) could be connected to PG&E with alternative energy systems operating to produce adequate power to both charge batteries and supply all of the power needs for the Project. In such case, the emergency and standby systems would be off unless otherwise needed.

If connected to PG&E, and in the event of a Public Safety Power Shutoff event, when PG&E secures power, the on-site energy systems will continue to serve the microgrid. The emergency and standby systems will operate in the event the microgrid is not available or the demands on the Project exceed available capacity. In distribution Options 2, 3 and 4 the standby systems will be designed to operate for up to five days with all other generation systems in the Project and GVD off.

[27] In electric power distribution, a busbar (also electrical buss) is a metallic strip or bar, typically housed inside switchgear, panel boards, and busway enclosures for local high current power distribution. They are also used to connect high voltage equipment at electrical switchyards, and low voltage equipment in battery banks. They are generally uninsulated, and have sufficient stiffness to be supported in air by insulated pillars. These features allow sufficient cooling of the conductors, and the ability to tap in at various points without creating a new joint.

3.1.9. Offtake of Export Energy & Ancillary Products

Any electricity generation and/or Energy Storage System products in excess of that required for the Project's energy demands, may be exported to a local municipality or Customer Choice Aggregator ("CCA")[28] or utility as determined appropriate. Such export of energy and/or ancillary products is a common feature of alternative energy projects and a component of microgrid operations when functioning in a grid-tied service area, especially due to the intermittent nature of alternative energy resources. Depending on the distribution option selected for the Project, the Developer may elect to connect the Project to the energy grid "in front" of the Project's development area revenue meter in order to enter into a front-of-meter contract to provide one or multiple functions to a CCA or utility, such as a generation resource, energy load or "sink." Front-of-meter contracts are frequent elements of alternative energy developments in California providing important streams of income for cash flow and assisting CCAs and utilities with respect to meeting California's Renewable Procurement Standards ("RPS") and managing intermittent supplies of alternative energy on the grid.[29]

A front-of-meter contract for the solar plus storage at the Project's development area could take the form of an Energy Capacity Sales Agreement or a Hybrid Power Purchase Agreement ("PPA"). Under a Capacity Sales Agreement, a utility or CCA would contract with the Developer for Resource Adequacy benefits or other capacity attributes solely from the Energy Storage System(s) located at the Project. The utility or CCA would purchase only the capacity and capacity attributes form the Energy Storage Systems leaving the Developer free to sell all of the Energy Storage System's and solar products, including energy, ancillary services, etc. to other parties, such as tenants at the Project's development area. The utility or CCA would pay a monthly capacity charge to the Developer, but no variable or energy charge. The Developer would retain the operational

[28] In 2002, California State Legislature passed Assembly Bill 117, enabling Community choice aggregation (CCA). CCA, also known as municipal aggregation, are programs that allow local governments to procure power on behalf of their residents, businesses, and municipal accounts from an alternative supplier while still receiving transmission and distribution service from their existing utility provider. In 2018, six of California's 19 CCAs had PPAs for new renewables.

[29] California's Renewables Portfolio Standard (RPS) was established in 2002 via SB 1078, which required 20 percent of the State's energy portfolio to be supplied by renewable sources such as solar, wind, hydroelectricity, geothermal, and bioenergy renewable energy by 2017. RPS goals have been accelerated over time to require the State's energy portfolio to be supplied by renewable sources in increasingly higher percentages. Since 2011, the RPS target has required all electricity retailers in the state, including CCAs and investor-owned utilities such as PG&E to procure 33 percent of their energy sales from renewable sources by the end of 2020. SB 350, passed in 2015, directs California utilities to further increase the amount of renewable energy to be delivered to customers to 50 percent by 2050. Collectively, PG&E, SCE, and SDG&E met the 33 percent goal in 2016 and are forecasted to reach 50 percent in 2020 (CPUC 2018c). Additionally, California CCAs submitted 2018 RPS compliance reports which showed that of the 19 CCAs that are currently providing energy load, three (15%) have already procured long term contracts above the 65% requirement, four have procured some long-term contracts but need to procure more to meet the 65% requirement, 11 have procured only short-term contracts, and one has not procured any RPS energy.

control and full authority over charging and discharging the Energy Storage System(s). The Developer could agree to certain exceptions, such as the utility or CCA's right to dispatch the Energy Storage System(s) during a limited number of peak hours each year.

Under a Hybrid PPA, the Developer would sell bundled products from the alternative energy generated from the solar systems integrated with some type of Energy Storage System product. Two main types of Hybrid PPAs could be selected. An as-available, take-or-pay Hybrid PPA typically requires the Energy Storage System(s) are only charged by on-site renewable energy generation. The Energy Storage System(s) would be discharged to moderate renewable intermittent energy flows on the grid. The Developer could sell as available energy bundled with other available products such as capacity attributes or RECs to the utility or CCA and would receive a fixed or escalating price in return. Under this type of Hybrid PPA, the utility or CCA typically has full discretion to charge and discharge the Energy Storage Systems, subject to certain operating parameters. The Energy Storage Systems would be designed to satisfy minimum levels of operating and technical requirements assessed based on the Solar Plus Storage Systems' performance in smoothing out energy flows.

Alternatively, the Developer may elect to execute a Hybrid PPA that sells renewable energy generated by the solar sources to the utility or CCA and allows the utility or CCA to decide when to charge and discharge the Energy Storage Systems and whether to charge the Energy Storage Systems from the on-site renewable energy generation or the grid. This type of hybrid PPA provides a grid service to the utility or CCA and is increasing popular with utilities and CCAs in California.

The compensation structures in Hybrid Renewable PPAs vary but typically the Developer would receive either (i) an energy charge ($/MWh) for energy delivered plus a capacity payment in relation to the Energy Storage Systems ($.KW-month) or (ii) just an energy charge ($/MWh), but with an agreed "adder" per MWh to compensate the Developer for the Energy Storage Systems.

In addition to the on-site and off-site improvements that would be required to accommodate the alternative energy resources, as discussed in Sections 3.1.2 and 3.1.6 above, the Developer would begin working through the California ISO interconnection process to enable power transmission to utilities or CCAs, as applicable. Once such processes are completed, the Developer could enter into a negotiation process with a CCA or other type of utility to execute one or more of the above described front-of-meter agreements.

3.2. Electrical Service Infrastructure for Future Phases

As the Future Phases of the Project are developed, the electrical infrastructure implemented in First Phase will be built upon with the goal of maintaining the Project's goals of reliability, clean power and resiliency. The potential development within the new zoning classification GVD

includes additional PV solar, energy storage and other energy generation technology to support the distribution option selected in the First Phase and Future Phases. Infrastructure systems to be built in the First Phase of the Project will support Future Phases.

4.0 OTHER CONSIDERATIONS

4.1 Direct and Indirect Environmental and Community Benefits

All electrical infrastructure developed at the Project as described herein will enable resilience, reliability and consistent power supply and distribution services for the Project. There are many direct and indirect benefits from solar energy, energy storage and microgrids to the Project, ranging from emergency power services to clean air.

In regard to direct environmental benefits, the proposed electrical infrastructure's distribution Options 2 through 4 offers distinct advantages. Option 1 would respond to California state law and generate approximately 2,775 KW of PV solar energy. Options 2 through 4 would go beyond California state law requirements, being the most environmentally superior options, and result in up to 28 MW of clean PV solar energy generated by the Project's electrical infrastructure.

There are also other indirect benefits that could be more readily monetized by the Project regardless of the chosen distribution option. The National Renewable Energy Laboratory ("NREL"), for instance, examined the value that energy storage has in reducing demand charges which are utility charges that are typically based on the peak amount of energy used in a specified time interval. Demand charges are designed to enable the utility to recover costs associated with having to build distribution capacity that is idle except for during peak demand periods. The end user's demand charge is usually set by a formula that considers, among other things, how that end user's peak demand coincides with the grid's peak demand. An end user whose own peak coincides with grid peak pays a higher demand charge.

Demand charges are not trivial. NREL determined that 25% of commercial customers pay demand charges greater than $0.015/kWh.[30] A microgrid can reduce this cost substantially. The Project can manage coincident peak contribution during peak grid times, such as hot summer afternoons. Likewise, the Project could manage peak load contribution for capacity charges and could even sell power back to the grid during peak load periods. Microgrids have been found to be cost-effective based upon indirect value to the community, providing emergency power and clean energy.

[30] *See* J. McLaren et al, "Identifying Potential Markets for Behind the Meter Battery Energy Storage: A Survey of the U.S. Demand Charges." National Renewable Energy Laboratory (2017) https://www.nrel.gov/docs/fy17osti/68963.pdf See also: E. Wood, "Wondering if Energy Storage Can Reduce Your Demand Charges," Microgrid Knowledge, August 24, 2017, found at: https://microgridknowledge.com/demand- charges-energy-storage/

4.2 Energy Impacts[31]

Analysis of the energy impacts reveals there will be a significant increase in energy use on the Project when compared to usage in the agricultural setting today. All aspects of the Project will be built to meet energy use code requirements and systems will be put in place to minimize wasteful, inefficient and unnecessary use of energy resources within the buildings in accordance with the California building and energy codes.

During the construction of First Phase and Future Phases, electrical energy will be consumed in the course of constructing the facility. Overall demolition and construction activities will be analyzed in a separate report prepared by the Developer. Operations will increase electrical consumption on the Project. The Project will be built in phases and the electricity usage will grow over time and generally in accordance with the Table 6.

5.0 CONCLUSION

As can be seen from the analyses presented in this report, the development of the proposed PV solar based electrical infrastructure options for the Project are all technically feasible, meet the needs of the Project and comply with California state law. Each of the four distribution options described herein would meet the energy demand needs of the Project, and the possibility of developing the distribution options in phases is feasible. With PV solar systems as the primary source of energy generation, nearly all of the electrical energy requirements at the Project will be met in an environmentally sound manner.

We have created a work flow for the Project's electrical infrastructure development, which is included in Exhibit A –Work Flow attached hereto. This Work Flow sets forth in detail the specific tasks related to the Project's electrical infrastructure development, the applicable processes related thereto and estimated timelines for completion of the electrical distribution options analyzed in this report.

- EXHIBIT A -
Work Flow

	ELECTRICAL INFRASTRUCTURE DEVELOPMENT ISSUES	ACTION ITEMS & PROCESSES	ESTIMATED TIMEFRAMES
1	Submit Public Draft of EIR	• Finalize DEIR	TBD
2	Developer must purchase from the current utility provider, PG&E, 18 miles of existing PG&E 12 KV circuit (which needs to be either removed or reused).	• Either through Advice Letter process with PG&E & CPUC or the creation of a Public Utility District & CPUC approval or seeking an exemption. • Further legal due diligence required.	TBD
3	Developer must install 25 miles of new joint trench and underground electrical infrastructure in the Project's proposed subdivisions.	• TBD - Dependent on construction timelines, development agreement and other factors still needed to be worked out. • Further legal due diligence required.	TBD
4	Developer must install 8 miles of overhead cables and poles to connect the proposed subdivisions.	• TBD – Dependent on construction timelines, development agreement and other factors still needed to be worked out. • Further legal due diligence required.	TBD
5	Per California law, for all residential structures, Developer must either install PV solar on the rooftops or provide solar through ground-mounted community solar systems.	• Further financial analysis as to best option for Developer would be beneficial here – eg. Financial modeling for Developer owned and operated community solar projects v. if Developer contracts out supply/servicing of solar projects to a third-party to own & operate the systems should be considered. • Whatever method of ownership is selected, this action item will require certain contracts to be drafted/negotiated with third-parties such as EPC contractors, vendors and end-users. Terms of warranties are important considerations in these types of documents. • A community solar ground mounted project would require additional legal work structure. A 20 year minimum commitment required for dedicated solar from any ground mounted project to each residential structure. • If ground mounted community solar project selected, Developer must submit an application to California Energy Commission ("Commission") for approval to administer a community shared solar electric generation or community shared battery storage system to provide partial or total compliance with the onsite electric generation system and/or battery storage system required by Section 150.1 of Title 24, California Code of Regulations, Part 6. The application must demonstrate to the Commission's satisfaction that each of the requirements for Section 10-115(a)1-	TBD: If ground-mounted community solar method selected as the solar installation choice, then such community solar systems must be installed and ready for inspection no later than the time the residential structures are inspected for compliance by the building department. All documentation for the community solar electric generation system and/or community solar battery storage system that is required to demonstrate compliance for the building must be completed prior to building permit applications.

		6 will be meet and shall include detailed explanation of the actions that will be taken by the applicant to ensure that each requirement is met over the period of time specified Section 10-115(a)4 for each building for which a partial or total offset is used to demonstrate compliance. • Further legal due diligence required.	
6	Per California law, all commercial structures must be build "Solar Ready" or, alternatively, Developer can elect to develop ground-mounted community solar projects to supply the commercial buildings' energy needs.	• See similar comments to Item 7 above. • Additionally, if ground mounted solar plus storage micro-grid are created and owner operated, then the development of solar PPAs for the sale of electricity to end user customers will need to occur. • Further legal due diligence required.	TBD
7	Recommendation that Developer install storage (battery type TBD) at every location where PV solar is installed – eg., regardless of choice to do rooftop solar or community solar.	• Further financial analysis as to best option for Developer would be beneficial here. • Decision partly dependent on which distribution option is chosen below. E.g., an independent microgrid requires some type of battery storage paired with the solar. Even if Option 1 is chose, the majority professional opinion in the industry is that solar system should either be sized for a baseload, e.g., never export to PG&E, or add storage to solar because PG&E retail rates extend the payback of a solar system when selling back to PG&E.	TBD
8	Based review of PG&E's Solar Photovoltaic ("PV) and Renewable Auction Mechanism ("RAM") Program Map, the SPOD, and the Project's tentative map, it appears that the construction plans for the Project contain residential and commercial buildings and other accessory features in areas directly over (to be constructed on top of) existing PG&E easements and poles.	• Further legal due diligence required. • Potential coordination/negotiation with PG&E required to reach agreement on moving or co-using the applicable easements and PG&E property over which construction is desired. If the uses do not qualify for a de minimis use exception of PG&E property, either the Advice Letter process with PG&E & CPUC *or* the creation of a Public Utility District & CPUC approval is required.	TBD
9	**Option 1:** The Project's current utility provider, PG&E, would provide the electrical distribution services (metering, distribution, etc.) to all facilities at the Project. This would require Developer to work with PG&E to request that PG&E, in coordination with Developer, build standard subdivision reconnects to the 11 existing PG&E service points on the Project. These subdivision reconnects would be built across the multiple newly created parcels and "remaining parcels" as shown on the tentative subdivision maps for the Project. All commercial properties would be built "Solar Ready" pursuant to applicable California energy code.	• Further legal due diligence required.	TBD

10	**Option 2:** The Project's current utility provider, PG&E, would provide the electrical distribution services (metering, distribution, etc.) to all residential structures at the Project as in Option 1. However, for the commercial and other accessory features at the Project, PG&E would only provide a single delivery point to the Project at the service entrance designated as "Back of House." From this point, Developer would construct, own and operate new meters and distribution lines to each of the 12 commercial facilities at the Project and to each of the 57 other resort accessory features consisting of water wells, waste water treatment plants, cell towers and IT features. This option would allow for Developer to own and operate "behind the meter" solar plus storage microgrids for all commercial and resort accessory features. Four locations at the Project have been identified as available for ground mounted solar plus storage systems. The independent micro-grids could function independent of PG&E, and could also still utilize PG&E as backup, energy storage, emergency services, and/or any other grid-tied services desired per the final Project's design.	• The development of independent behind the meter solar plus storage microgrids for the commercial and other facilities at the Project could be accomplished with the projects owned by Developer and the electricity sold to the lessors of the buildings at the Project through traditional solar Power Purchase Agreements ("PPAs). The development of such PPA documents would be relatively straightforward given the lack of apparent tax equity investor and Developer's position of also owning the land and buildings; however, the transactional documents would still require a certain amount of time to set up from a legal perspective. • Further legal due diligence required.	TBD
11	**Option 3:** This option envisions that Developer would create a "Public Utility District" that would supply power, own all of the electrical infrastructure and provide related services to all of the residential, commercial and accessory buildings and features at the Project. This option includes behind the meter solar for commercial facilities at the central solar locations to enable community solar and community storage to meet the Project's aesthetic goal related to no solar on roofs. Between one to four ground mounted solar plus storage solar systems would be located at the Project, which collectively could generate enough electric supply for the Project's entire energy needs. Similar to Option 2, PG&E would provide a single delivery point to the Project at the service entrance designated as "Back of House" and the "remainder parcels" including roads connecting the commercial properties would be recorded as a single parcel or multiple parcel's with a designated network of easements to accommodate the micro-grid design.	• Finish feasibility study. • Further legal due diligence / analysis required. • Conduct study with legal input to estimate the value of the electric distribution system. • Hold referendum to create District. • Potentially hire third-party to assist with running the day to day operations of the Public Utility District. • Construct, own and operate community solar and storage systems at the Project. • Ongoing operations and maintenance obligations of electrical infrastructure required. • Evaluate financing alternatives for any debt desired/required for the acquisition of District/utility assets. • Exercise rights to acquire PG&E easements and property for District.	TBD: Uncertain and lengthy process.
12	**Option 4:** This option would provide for a hybrid of Options 2 and 3, wherein Developer would create and own solar	• Similar comments to 13 and 14 above	TBD

	plus storage micro-grids that would be constructed for all or certain commercial structures at the Project similar to Option 2. PG&E would service all residential lots at the Project. All commercial facilities served by the privately owned micro-grids would be serviced through traditional solar Power Purchase Agreements ("PPAs") until the formation of the Public Utility District is completed. Under this option, the Project's electrical infrastructure would begin, at least in certain areas of the Project, while the extensive formation processes related to setting up a Public Utility District is accomplished. Option 4 would provide for a phased approach to the development of the Project's distribution infrastructure and include the potential sale of the solar plus storage systems to the Public Utility District at a later date, if desired.		

APPENDIX FIRE

GUENOC VALLEY WILDFIRE PREVENTION PLAN

MAHÁ

GUENOC VALLEY

DRAFT WILDFIRE PREVENTION PLAN

FOR THE FIRST PHASE OF THE
MAHA RESORT AT GUENOC VALLEY

FEBRUARY 5, 2020

ACKNOWLEDGMENTS

The *Maha Guenoc Valley Wildfire Prevention Plan* was created as part of collaborative effort between the County of Lake, representatives from the California Department of Forestry & Fire Protection (CAL FIRE), design and engineering teams, and grazing consultants. The group relied upon local knowledge and trusted resources to identify the key fire risks throughout the site and then develop an innovative and comprehensive wildfire prevention strategy.

Note: Site plans throughout this document are intended to demonstrate key wildfire prevention concepts. Final site plans are subject to change; please refer to the tentative and final maps for detailed site plan information, including parcel layouts and circulation alignments. In addition, the wildfire prevention commitments for the McCain Canyon entry road option are detailed in the McCain Canyon entry road grading plan.

OVERVIEW

GOALS & INTENT

The Maha Resort at Guenoc Valley is situated in a unique northern California landscape. The site's hills and valleys filled with oak woodlands, grasslands, vineyards, and grazing pastures will create an exceptional visitor and resident experience. Yet, this same setting also presents critical wildfire risks. A development of this size and expense requires a comprehensive approach to protect the environment and buildings from wildfire damage.

The *Maha Guenoc Valley Wildfire Prevention Plan* presents an integrated approach to wildfire management throughout the project site. This plan includes a thorough consideration of the site's wildfire history as well as vegetative, topographic, and climatic wildfire risks. These risk patterns inform a series of essential wildfire prevention strategies for all components of the project. This includes innovative concepts and commitments that will contribute to a wildfire resilient setting. For example, goat, sheep, and cattle will reach many hard-to-access areas of the property to graze dry grasses and reduce understory vegetation, both of which are significant wildfire risk factors. As determined by the Homeowner's Association, the project site will additionally be protected with fire breaks along the roadway network as well as along unprotected areas of the property boundary. In the case of an actual wildfire, the on-site emergency response system will quickly be deployed–which includes everything from high-definition fire detection cameras to an on-site emergency and fire response center.

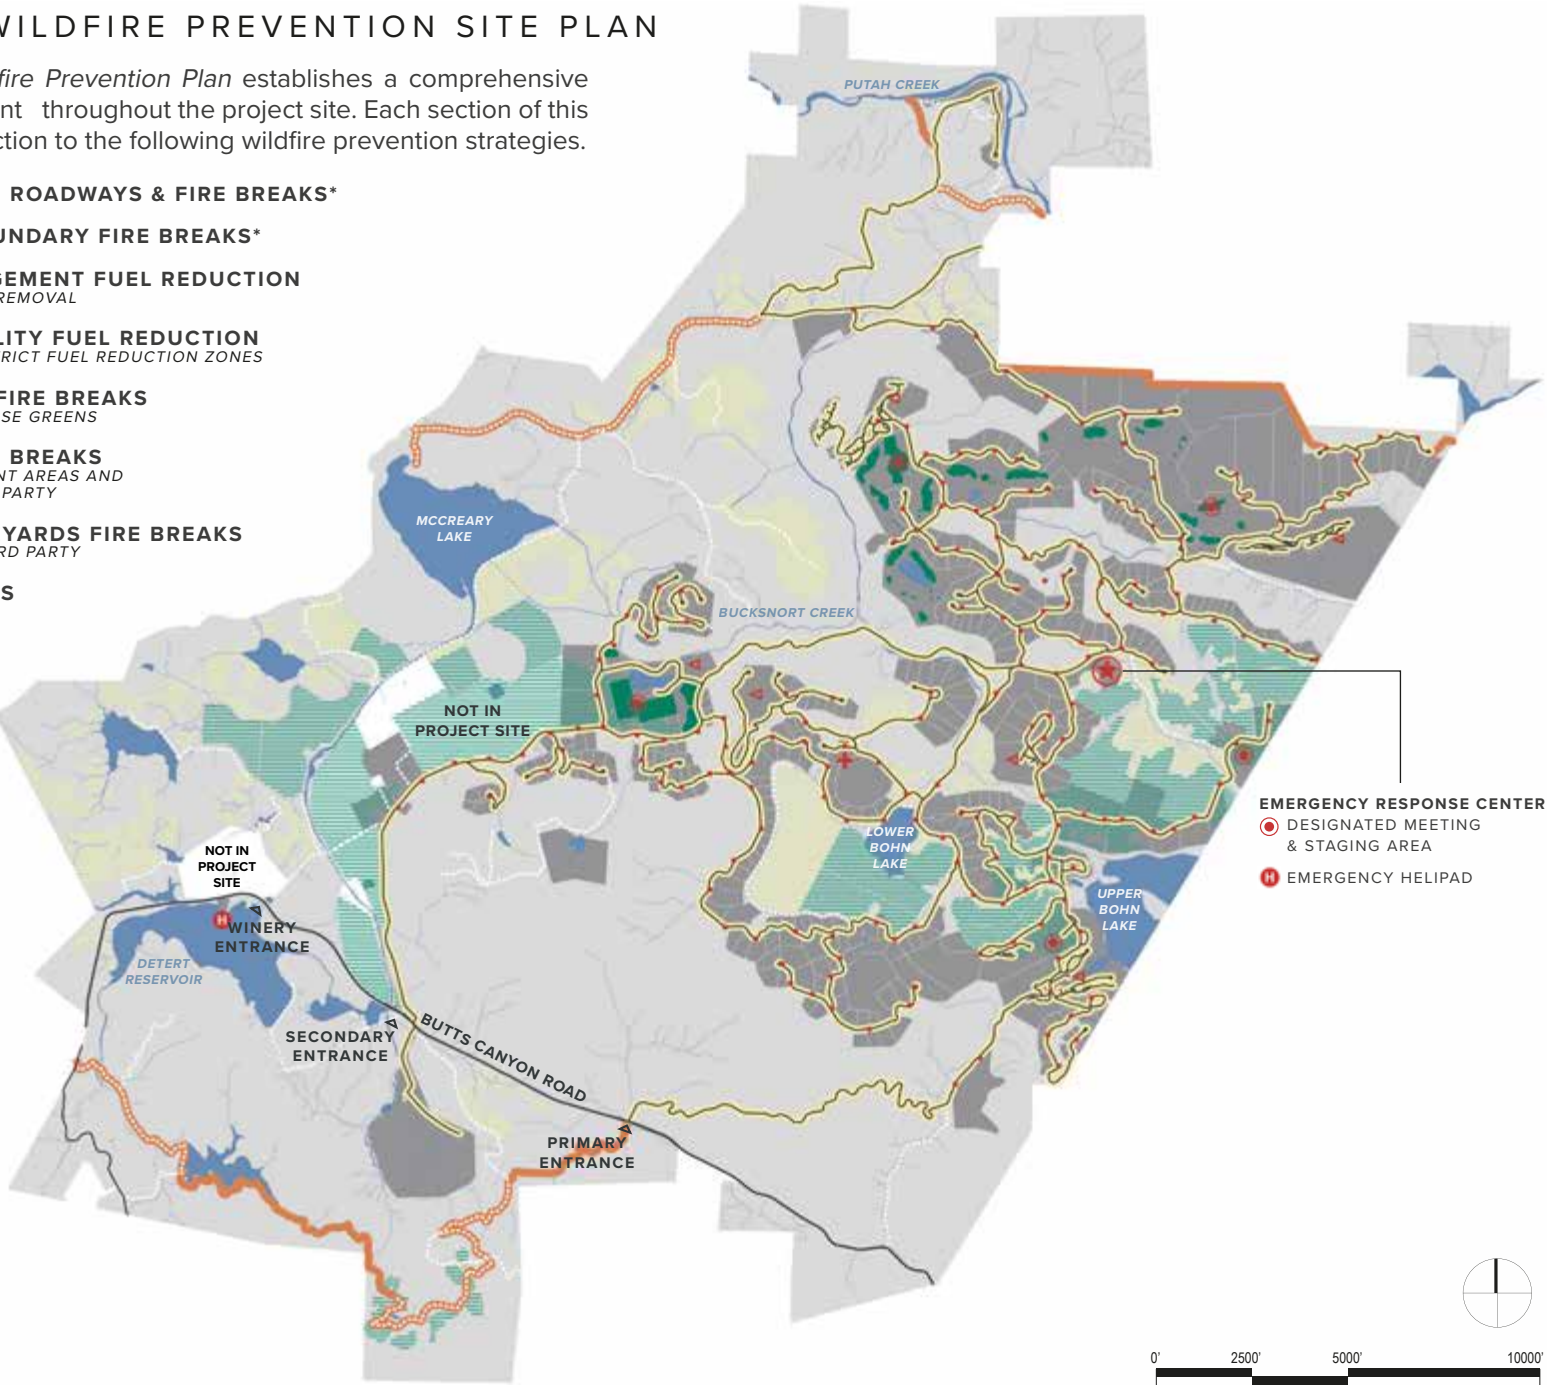
These efforts will be part of an overall commitment to developing long-term wildfire resilience through innovative partnerships, research, and strategies. The resort will follow the guidance and establish collaborations with the County of Lake, the California Department of Forestry & Fire Protection (CAL FIRE) and the local fire department, South Lake County Fire, to continuously improve the wildfire prevention plan. These actions will all contribute to the resort's plege to become a Firewise Community as designated by the National Fire Protection Association (NFPA), which will reinforce the long-term ability to address wildfire risk. With comprehensive and careful planning, Maha Resort at Guenoc Valley will offer an dynamic and effective ability to reduce wildfire risk for all residents, visitors, and workers.

OVERVIEW
COMPREHENSIVE WILDFIRE PREVENTION SITE PLAN

The *Maha Guenoc Valley Wildfire Prevention Plan* establishes a comprehensive approach to wildfire management throughout the project site. Each section of this plan will provide a brief introduction to the following wildfire prevention strategies.

- **PRIMARY TWO-WAY ACCESS ROADWAYS & FIRE BREAKS***
- **VOLUNTARY PROPERTY BOUNDARY FIRE BREAKS***
- **ACTIVE LANDSCAPE MANAGEMENT FUEL REDUCTION**
  GRAZING AND MANUAL VEGETATION REMOVAL
- **RESIDENTIAL/RESORT/FACILITY FUEL REDUCTION**
  STRUCTURE FIRE SPRINKLERS AND STRICT FUEL REDUCTION ZONES
- **IRRIGATED RECREATIONAL FIRE BREAKS**
  EQUESTRIAN FIELDS AND GOLF COURSE GREENS
- **IRRIGATED VINEYARDS FIRE BREAKS**
  CURRENTLY PLANTED IN DEVELOPMENT AREAS AND AREAS LONG-TERM LEASED BY THIRD PARTY
- **POTENTIAL IRRIGATED VINEYARDS FIRE BREAKS**
  IN AREAS LONG-TERM LEASED BY THIRD PARTY
- **EXISTING RANCH ROADWAYS**
  USED FOR ACTIVE FUEL REDUCTION AND EMERGENCY ACCESS
- **EMERGENCY RESPONSE CENTER**
- **EARLY DETECTION SYSTEM**
  HIGH-DEFINITION CAMERA
- **EMERGENCY NOTIFICATION SIREN SYSTEM**
  EXACT LOCATIONS TBD
- **DESIGNATED MEETING & STAGING AREA**
- **HELIPADS**
- **FIRE HYDRANTS**
- **WATER SOURCES**
  RESERVOIRS, LAKES, PONDS, CREEKS & STREAMS

**To be constructed at the discretion of the Homeowner's Association if and when necessary*



OVERVIEW
IMPLEMENTATION & MANAGEMENT

The *Maha Guenoc Valley Wildfire Prevention Plan* will create a comprehensive framework to guide the plan's continuous development, implementation, and management. Beyond meeting code requirements defined by the County of Lake and the State of California, the project team will work closely with the California Department of Forestry & Fire Protection (CAL FIRE) and the local fire department, South Lake County Fire, to continuously identify strategies to improve the wildfire prevention plan.

The plan will be implemented through the resort's Covenants, Conditions, & Restrictions (CC&Rs), development agreement, and Guenoc Vally District (GVD) zoning ordinance documents, which will all be overseen by the County of Lake through the development permitting process. The resort's residential homeowner's association (HOA) will provide ongoing oversight of the plan's management, operations, and enforcement. The ability for this organization to oversee the wildfire plan will be specified within the resort's CC&Rs.

SITE CONTEXT
PROJECT SETTING & HISTORY

The Maha Resort at Guenoc Valley is located approximately 100 miles north of the Bay Area in the agricultural and viticultural region of North–central California. The resort is located in the southeastern corner of the County of Lake, three miles southeast of Middletown and on Napa County's northern border.

Guenoc Valley, a small inland valley, is comprised of varying landscapes and conditions. The valley experiences greater seasonal temperature extremes than neighboring areas, and has a wide range of elevation changes throughout the property. These varying elevations support various vegetation types and uses; a series of vineyards generally cover the lower areas and slopes, while oak woodlands, grasslands, and chaparral covered hillsides offer plenty of opportunities for livestock grazing.

At approximately 16,000 acres, the resort site remains one of the largest privately owned properties in the state of California. The property first came to public attention when a portion of the ranch was owned by the British Actress, Lillie Langtry. Through the years the land has continued to be utilized for outdoor recreational pursuits, vineyards, and agriculture.

PROJECT SITE LOCATION

In resort site is located approximately 100 miles north of the Bay Area on the border of Napa and Lake County with close access to Clearlake and Santa Rosa.

SITE CONTEXT
PROJECT SITE PLAN

This site's inherent agricultural and rural character will continue to be a valuable aspect of the resort experience. The proposed development—which includes boutique hotels, residential estates, recreational amenities, operational facilities, roadways, and trailways—will be carefully integrated into the site. The resort will prioritize protecting and enhancing vineyards, grazing pastures, and undeveloped open areas throughout the development process.

SITE CONTEXT
WILDFIRE HISTORY

Guenoc Valley is located in a fire prone region of California. Although wildfire is a year-round possibility, risk increases during the late summer into the fall. During this time of the year, hot days with a lack of precipitation dries out vegetation, which increases the risk for wildfire, particularly during windy days. Climate change could further affect these risk factor patterns.

Wildfires have affected the site throughout its history. Since the 1950s, fires of varying size and intensity have burned parts of the project site. A few of the more recent fires, including the Butts Fire in 2014 and the Jerusalem and Valley Fires in 2015, were large-scale fires which spread from off-site and affected large portions of the site as well as nearby properties. In particular, the Valley Fire caused wide-spread damage to the southern portion of the site, particularly along Butts Canyon Road. These affects are still visible and present today.

The scale, severity, and effects of the most recent wildfires are all important considerations in developing a rigorous wildfire prevention strategy.

SITE CONTEXT

WILDFIRE RISK FACTORS: VEGETATION

The dominant vegetation types range from maintained agricultural fields and vineyards to dense woodlands and forestlands. Each type contains varying levels of wildfire fuels, with areas such as irrigated vineyards generally being less prone to fires and chaparral-covered hillsides being more prone. These patterns affect how wildfires are likely to move across the landscape.

SITE CONTEXT
WILDFIRE RISK FACTORS: REGIONAL WIND PATTERNS

Windy conditions during the fire season increase the likelihood of fires erupting, rapidly escalating, and increasing in intensity and scale. Depending on various climatic conditions, regional wind patterns may vary seasonally and even daily. However, the resort site is primarily affected by two regional wind patterns: the Konocti Winds and Diablo Winds.

The Konocti Winds, as shown below, affect the site with varying morning and afternoon wind patterns. In the morning, wind typically flows northward from the Bay Area. In the afternoon, cool air flows eastward from the coast over Cow Mountain and towards Clear Lake, splits around Mount Konocti, and then increases in speed and temperature as it flows southwards towards Highway 20, Morgan Valley, and Guenoc Valley.

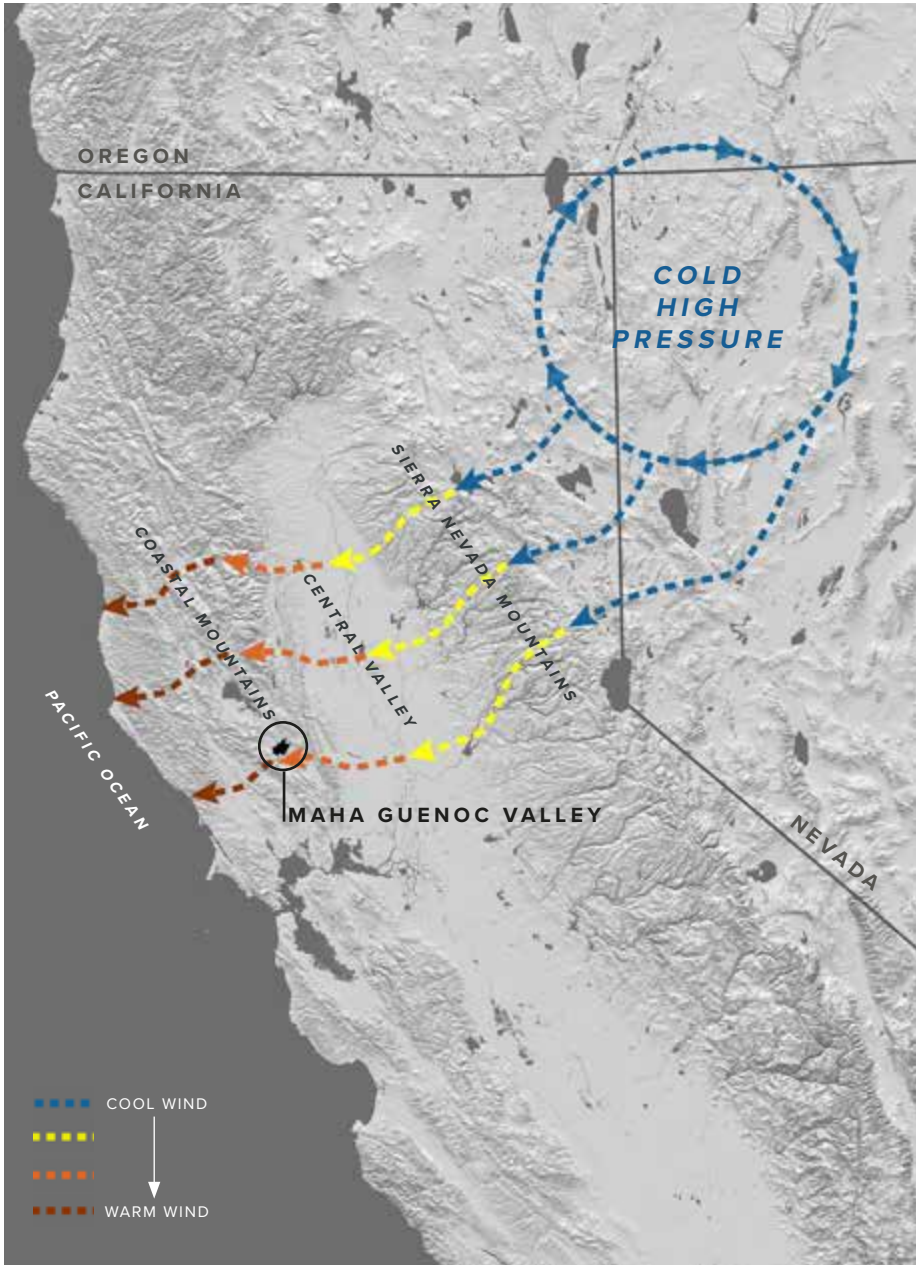
South Lake County Fire Protection District and National Weather Service San Francisco Bay Area, 2019

SITE CONTEXT
WILDFIRE RISK FACTORS: REGIONAL WIND PATTERNS



DIABLO WIND PATTERNS

As shown on the right, the resort site is also subject to the Diablo Winds. This wind pattern begins in the Great Basin area of Nevada and Utah. The jet stream pushes cool, high pressure air from the area down to California. Once crossing over and cascading down the Sierra Nevada mountain range, the air increases in temperature and decreases in humidity; the air continues to increase in temperature as it crosses the Central Valley.

Finally, the warm air increases in speed as it pushes between narrow gaps in the Coastal Mountain ranges towards the Pacific Ocean. This pattern primarily affects the region during high fire risk seasons in the fall and winter.

FIRE WEATHER WATHCES & RED FLAG WARNINGS

When certain climate conditions combine, the National Weather Service may issue either a Fire Weather Watch or a Red Flag Warning.

A **Fire Weather Watch** indicates that local conditions resulting in extreme fire could occur in the next 12 - 72 hours. Wildfires are possible, but not imminent or currently occurring.

A **Red Flag Warning**—the highest and most serious type of alert—indicates to residents that local conditions may result in extreme fire behavior within 24 hours. Wilfires are ongoing or may begin shortly.

Various combinations of climate conditions can result in either a watch or warning, including:

- Low relative humidity
- Strong winds
- Dry fuels
- Potential for dry lightening strikes

During both Fire Weather Watches and Red Flag Warnings, residents are urged to practice extreme caution, as major wildfires could be started with a simple spark.

SITE CONTEXT

WILDFIRE RISK FACTORS: LOCAL WIND PATTERNS

While affected by the larger Konocti and Diablo wind patterns, the resort site's topography and microclimates also contribute to unique wind conditions. The wind patterns shown in this map are based on three local wind stations and demonstrate a likely wind condition for a typical day during the July through November fire season. Depending on a variety of climatic conditions, local wind patterns could easily change direction and speed and affect the spread of potential wildfires.

SITE CONTEXT

WILDFIRE RISK FACTORS: TOPOGRAPHY

A significant portion of Guenoc Valley is dominated by hills and ridges with slopes exceeding 30 percent, which carve the landscape into a series of several smaller valleys. Areas with steeper slopes are at a greater risk of quickly burning during a wildfire. Steep slopes that have burned are also at an increased risk of erosion during the post-wildfire recovery period.

SITE CONTEXT
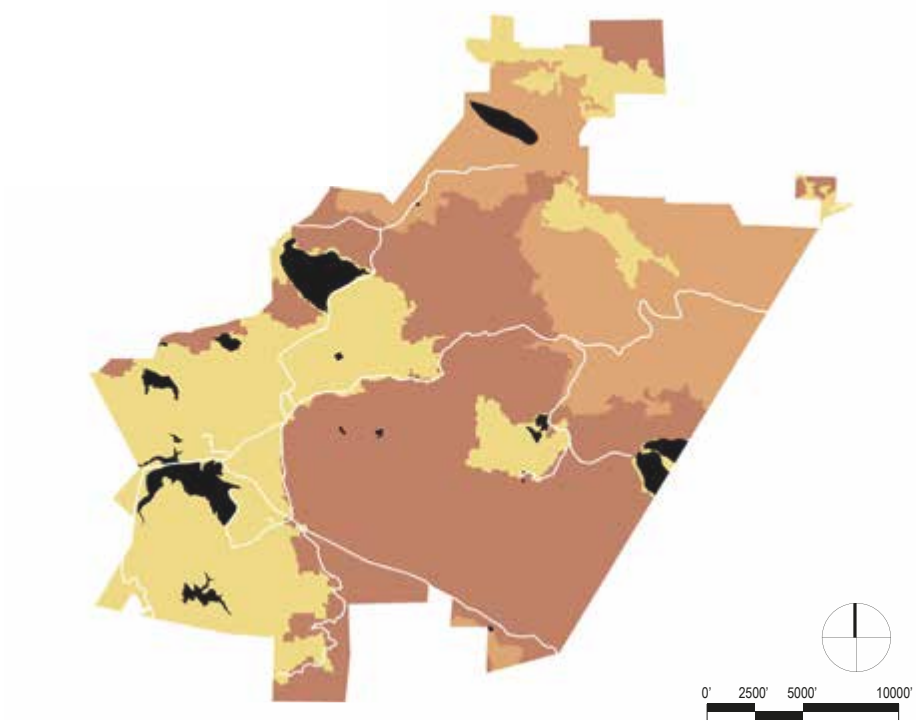
WILDFIRE RISK SEVERITY

The specific factors that affect wildfire risk are complicated. A wide range of topographic and landscape conditions create a complex environment to predict and prepare for potential wildfires.

Various risk factors—including those described in the preceding pages—are considered in developing CAL FIRE's Fire Hazard Severity Zones rating system and map. This rating system situates the resort site in a moderate to very high severity zone. The highest risk areas are in the southeast and central parts of the site. These areas have the steepest slopes, are more likely to have a chaparral vegetation coverage, and are exposed to northern-moving winds.

Given the connection between fire risk and slopes, the site's lower risk locations tend to be the flatter valley areas to southwest and northeast. This risk is further reduced where the land is more actively cultivated with vineyards and others farming practices. The areas around the site's many water bodies also generally have a lower risk severity.



FIRE HAZARD SEVERITY ZONES

- VERY HIGH SEVERITY

SITE CONTEXT
WILDFIRE REGIONAL RISK

Cataloging environmental risks is the first step to successfully develop a wildfire prevention plan. However, even with the best research and preparation within the site, fires on neighboring properties can rapidly move across the property boundaries.

While Guenoc Valley's setting is an inherent part of its attraction, the surrounding rural landscapes can also increase the site's wildfire risk. The property is bordered by ranches, pastures, woodlands, and forests with various levels of fire hazard severity. The northern edge of the property is adjacent to the Snow Mountain National Monument, an area of land stretching across approximately 330,000 acres and managed by the Bureau of Land Management (BLM).

The minimally managed landscapes within these neighboring areas tend to have less rigorous wildfire prevention practices, which can result in larger fuel reserves. As detailed in the following pages, additional precautions will be taken along the property boundaries where the risk of fires spreading onto the site is greater.

GENERAL WILDFIRE PREVENTION

GENERAL WILDFIRE PREVENTION STRATEGIES

In order to retain the resort site's inherent rural quality, a low-impact design plan prioritizes limited buildings, roadways, or infrastructure. Undeveloped areas will be managed to reduce wildfire risk through the following strategies:

- **Fire Breaks**
  Fire breaks will be established and maintained along all roadway corridors as well as vulnerable property boundary edges.

- **Active Landscape Management**
  Fields, pastures, woodlands will be actively managed to reduce fire risk. These areas will be continuously grazed with a rotation of cattle, sheep, and goat livestock. In certain locations, dead or fire-prone vegetation may also be manually thinned or removed with machinery and crews.

- **Irrigated Green Belt**
  Vineyards, orchards, gardens, and recreational fields—as well as irrigated residential, resort, and facility landscapes—will all become part of a site-wide irrigated green belt.

FIRE BREAKS

DISRUPT FIRE PATHWAYS

A network of fire breaks will be developed throughout the site, especially along roadways; they will be established and maintained as phases are built.

ACTIVE LANDSCAPE MANAGEMENT

LOP & SCATTER

This involves thinning and removing flammable and dead vegetation through felling and cutting; material is then distributed across the ground.

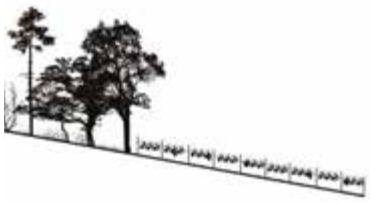
MASTICATE

Flammable and dead vegetation is thinned and removed with chopping, grinding, and mowing; material is then scattered across the ground.

GRAZE WITH LIVESTOCK

Sheep, goat, and cattle livestock will graze understory grasses and vegetation; the livestock will continuously rotate throughout the property.

IRRIGATED GREEN BELT

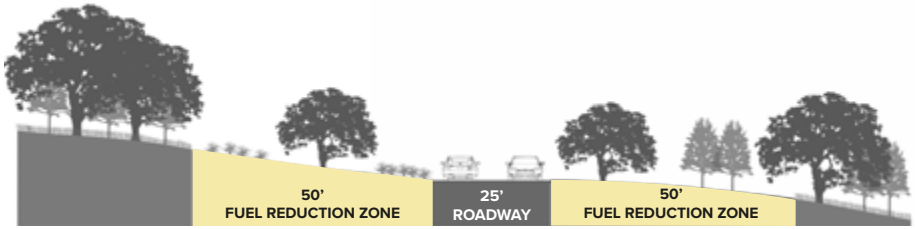


CONNECT IRRIGATED AREAS

Where feasible, contiguous green belts with irrigated farmlands, landscapes, and recreational fields will be developed.

GENERAL WILDFIRE PREVENTION
FIRE BREAK NETWORK

TYPICAL ROADWAY FIRE BREAK

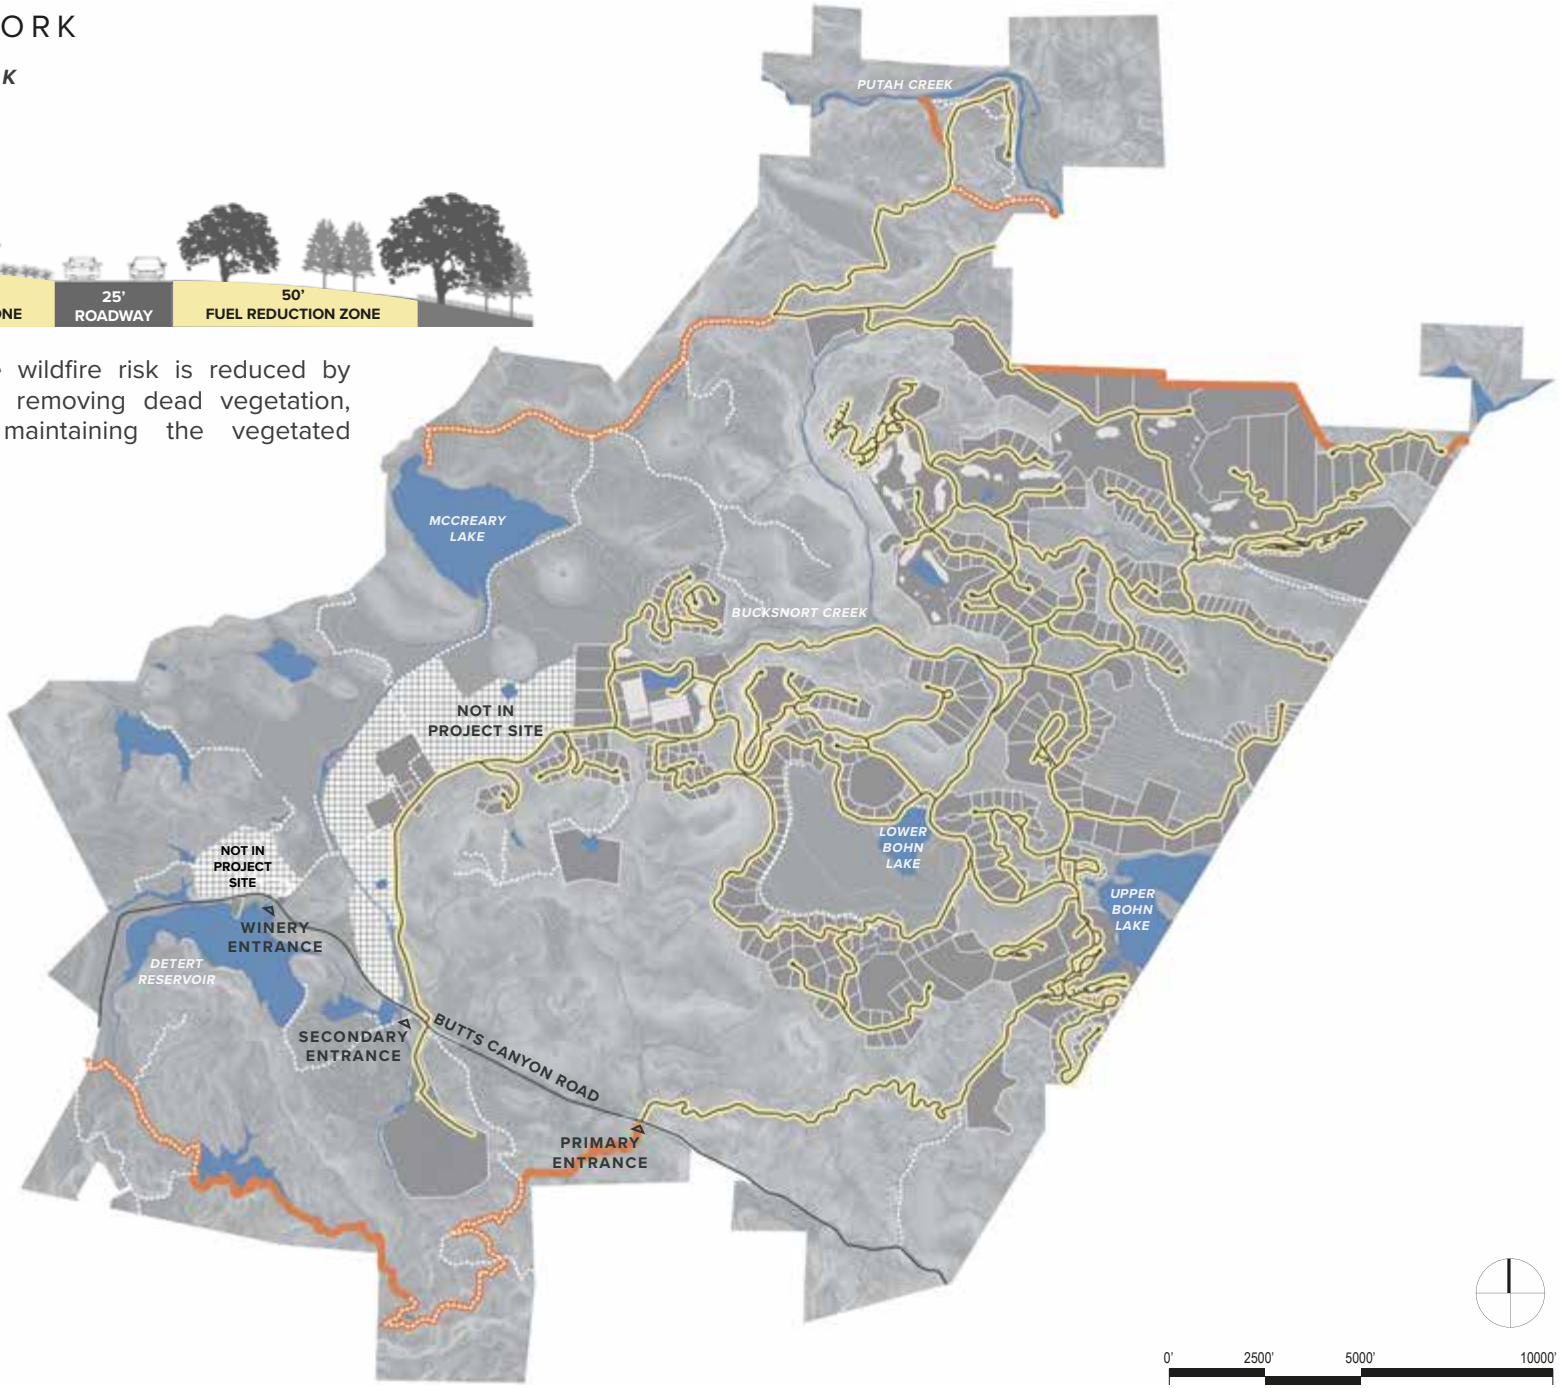


Fire breaks are areas where wildfire risk is reduced by strategies such thinning and removing dead vegetation, separating canopies, and maintaining the vegetated understory through grazing.

All roadways will be bordered on each side by a fuel reduction zone. As an overall defense strategy, 100 foot wide fire breaks could also be established and maintained at select vulnerable areas of the property boundary.

PRIMARY TWO-WAY ACCESS ROUTES & ROADWAY FIRE BREAKS

VOLUNTARY PROPERTY BOUNDARY FIRE BREAKS



GENERAL WILDFIRE PREVENTION
ACTIVE LANDSCAPE FIRE MANAGEMENT

The resort's landscapes will be actively managed to reduce fire risk. This will be achieved through a two-part strategy. First, livestock grazing will be heavily relied upon to reduce fire risk (see next page). Grazing will primarily take place within the site's undeveloped rural landscapes; where feasible and permissible, grazing may also be used to manage landscapes within resort, residential, and facility parcels as well as within vineyards.

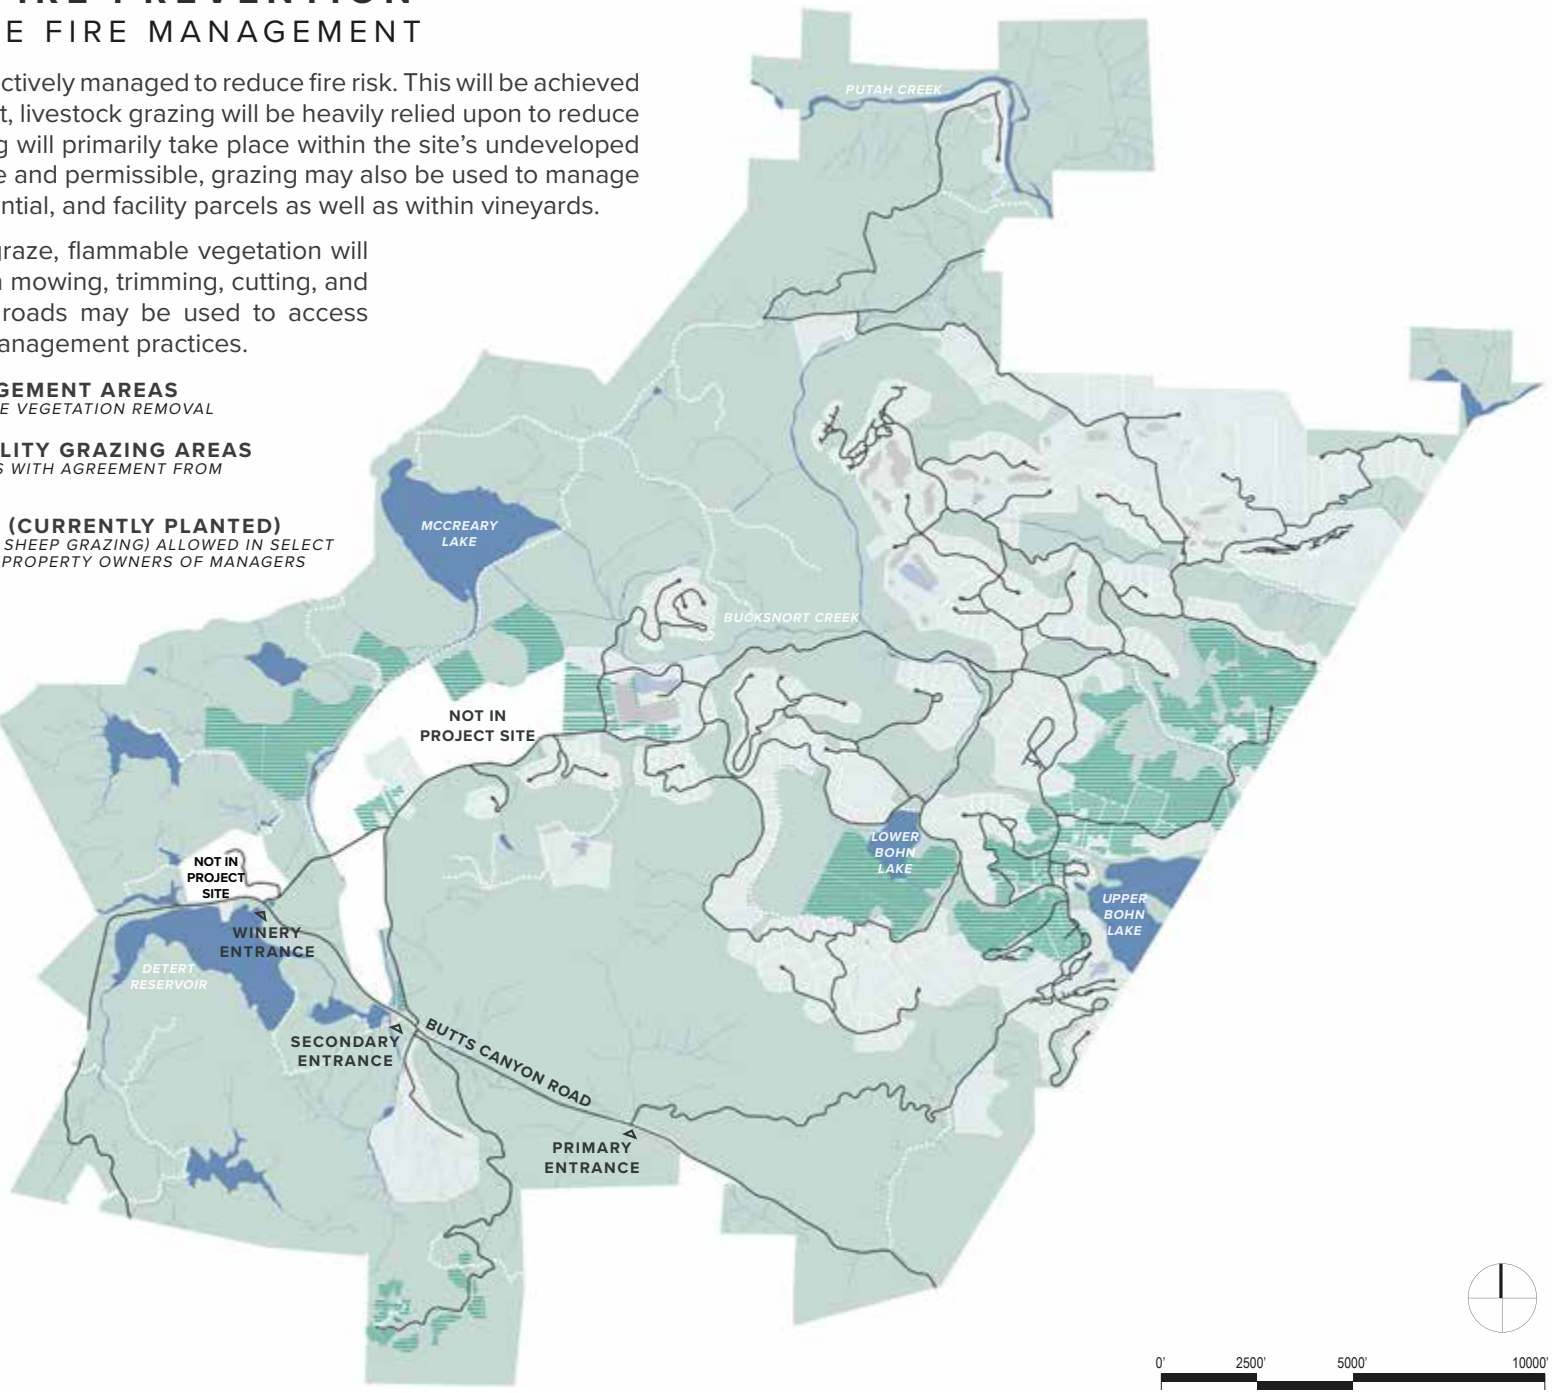
In areas that are infeasible to graze, flammable vegetation will be manually addressed through mowing, trimming, cutting, and brush removal. Existing ranch roads may be used to access more remote areas for active management practices.

ACTIVE LANDSCAPE MANAGEMENT AREAS
CONTINUED GRAZING AND SELECTIVE VEGETATION REMOVAL

RESIDENTIAL/RESORT/FACILITY GRAZING AREAS
GRAZING ALLOWED IN SELECT AREAS WITH AGREEMENT FROM PROPERTY OWNERS OR MANAGERS

VINEYARD GRAZING AREAS (CURRENTLY PLANTED)
MINIMALLY IMPACTFUL GRAZING (I.E. SHEEP GRAZING) ALLOWED IN SELECT VINEYARDS WITH AGREEMENT FROM PROPERTY OWNERS OF MANAGERS

EXISTING RANCH ROADS



GENERAL WILDFIRE PREVENTION
GRAZING PRACTICES

As a key component of the active landscape management plan, goat, sheep, and cattle livestock will continuously rotate throughout the resort site to reduce and remove overgrown and dead vegetation.

As these animals are capable of moving around difficult terrain, allowing them to graze throughout the site will ensure that hard-to-reach areas are regularly maintained. And, as each of these species prefers different types of vegetation, a regular rotation will broaden the types of flammable vegetation that is reduced and removed.

The following matrix provides general standards of site-wide, long-term grazing practices. Although the exact configuration of grazing areas and corridors may shift over time, these general parameters will help to coordinate the placement and movement of herds throughout the site.

Species	**Primary Foraging Behavior**	**Equivalent Animal Unit** *	**Preferred Vegetation**	**Minimum Practical Grazing Area** (Acres) **	**Maximum Practical Grazing Slope** (Percent %) (Wet Ground / Dry Ground)	**Maximum Density** (lbs per acre) (Wet Ground/Dry Ground) ***	**Grazing Season**	**Herd Type**
Goats	Browsing	0.2	Chaparral, Brush, Poison Oak, Weeds	0.15 AC	60% / 80%	15,000 lbs / 60,000 lbs	April - October	Seasonal/ Contracted
Sheep	Grazing	0.2	Oak Woodland/ Grassland, select weeds	0.15 AC	60% / 80%	15,000 lbs / 60,000 lbs	April - June	Seasonal/ Contracted
Cattle	Grazing	1.0	Oak Woodland/ Grassland	0.5 AC	50% / 70%	10,000 lbs / 50,000 lbs	Year Round	Resident

* "Equivalent Animal Units" establishes a consistent unit factor to compare herd sizes; for example, a herd of 10 cows (1.0 AU) is equivalent to a herd of 50 goats (0.2 AU)

** The "Minimum Practical Grazing Area" is significantly dependent on herd size; these minimum practical grazing areas assume that herd sizes will remain equally small in order to accommodate efficient grazing in and around small spaces between buildings and roads.

*** The "Maximum Density" is the maximum collective herd weight supported per graze-able acre

GENERAL WILDFIRE PREVENTION
IRRIGATED GREEN BELT

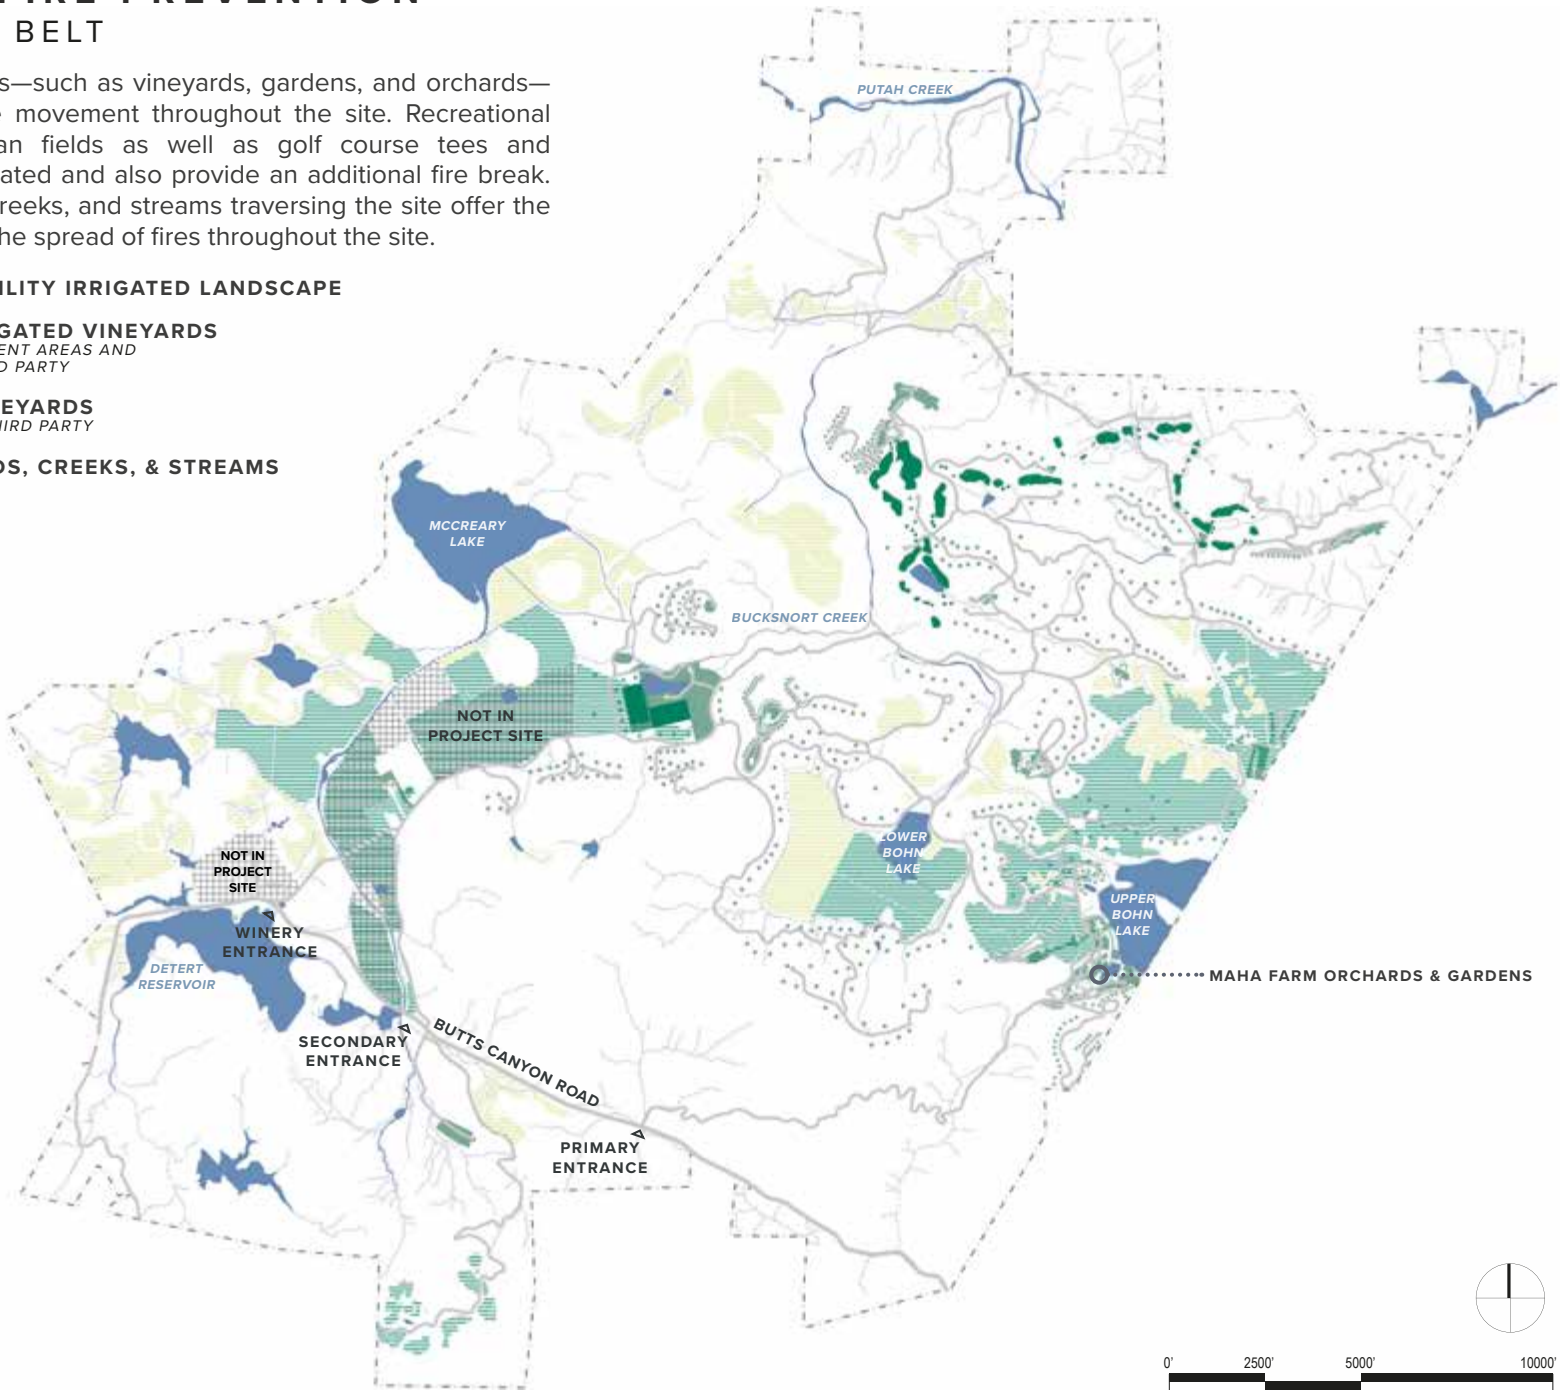
Irrigated agricultural operations—such as vineyards, gardens, and orchards—will interrupt potential wildfire movement throughout the site. Recreational amenities—including equestrian fields as well as golf course tees and fairways—will be regularly irrigated and also provide an additional fire break. The reservoirs, lakes, ponds, creeks, and streams traversing the site offer the additional benefit of reducing the spread of fires throughout the site.

RESIDENTIAL/RESORT/FACILITY IRRIGATED LANDSCAPE

CURRENTLY PLANTED IRRIGATED VINEYARDS
CURRENTLY PLANTED IN DEVELOPMENT AREAS AND AREAS LONG-TERM LEASED BY THIRD PARTY

POTENTIAL IRRIGATED VINEYARDS
IN AREAS LONG-TERM LEASED BY THIRD PARTY

RESERVOIRS, LAKES, PONDS, CREEKS, & STREAMS



CONSTRUCTION WILDFIRE PREVENTION

RESPONSIBILITIES & PROCEDURES

Construction practices will be carefully monitored to ensure that operations which could ignite a wildfire are minimized to the greatest extent possible.

Fire Safety Oversight and Responsibilities

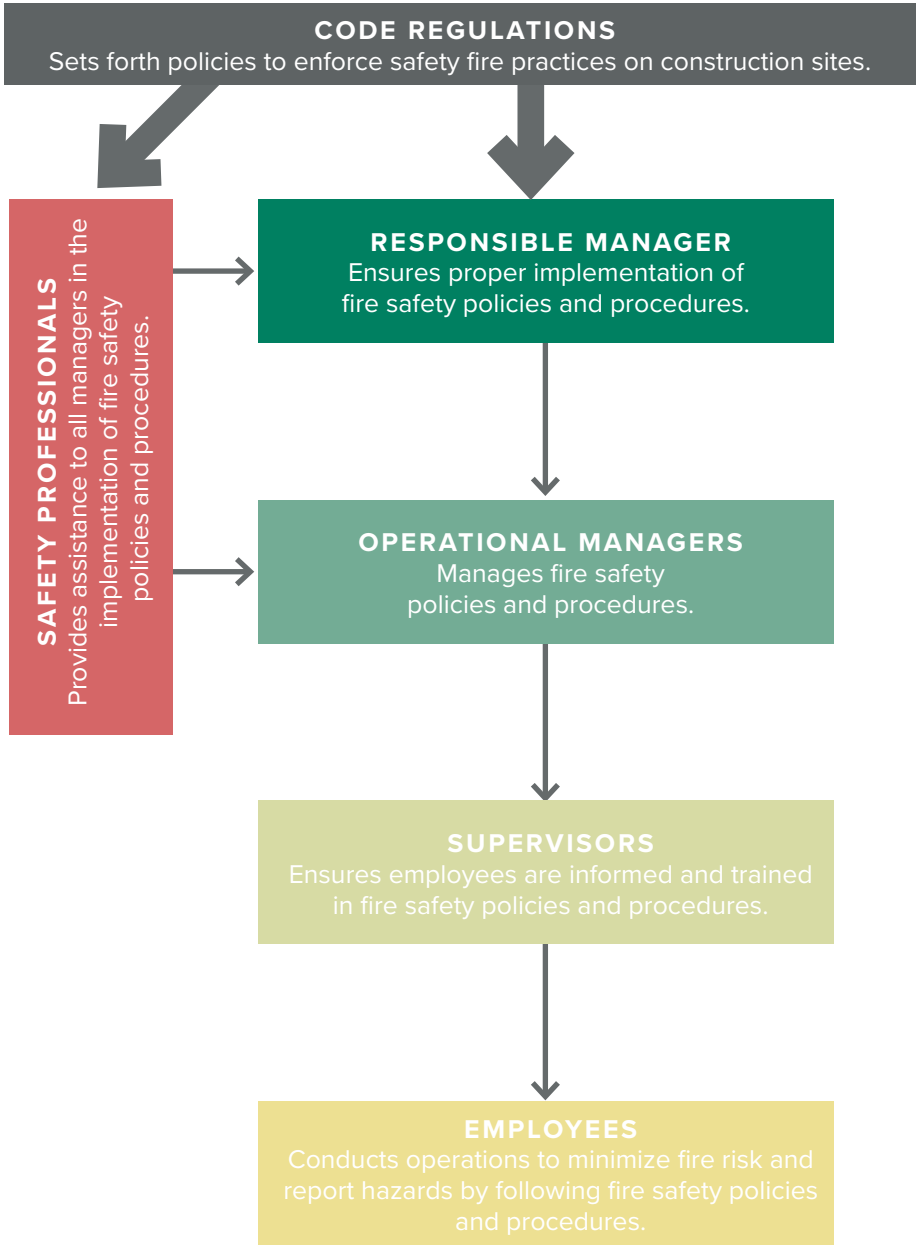
Beyond set code regulations, the project's general contractor has established fire prevention and protection procedures for every level of management and employment (see flowchart). This includes the following:

- Safety Professionals will advise and assist the Responsible and Operational Managers in charge of the project on fire safety;
- Supervisors–as advised by the Safety Professionals–will play a pivtol role in ensuring employees are informed and trained in fire safety. They will often conduct workforce training to educate employees about the fire hazards associated with specific tasks. They will also approve and carefully monitor any hot work or the use of temporary portable heaters. Supervisors will ensure that fire extinguishing equipment is present on all work sites and regularly inspected; and
- All managers and employees will be well-informed on procedures to immediately report fires.

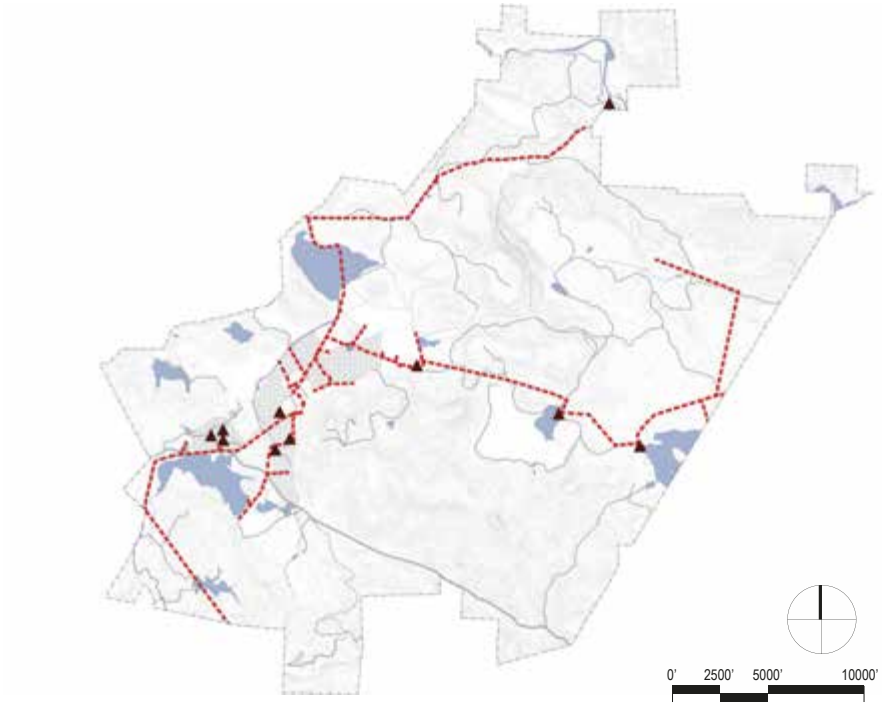
Fire Safety Procedures

During wildfire season, there is a heightened risk of construction-caused fires. In particular, heavy machinery has the potential to ignite fires during site preparation, preliminary grading, and utility line establishment. In order to mitigate fire risk during construction, the local CAL FIRE unit has recommended the following fire safety procedures, among others:

- One round-tip shovel and one water fire extinguisher should be available within 10 feet of all work areas;
- Portable fire extinguishers should be kept in every construction vehicle and piece of equipment;
- Vegetation within the work area should generally be mowed by noon during wildfire season or whenever wildfire conditions are present;
- Hot work should establish a wildfire watch for the duration of work and for 30 minutes after;
- Everyone working on-site should be aware of their location within the project in the event that they must report a fire;
- Everyone working on-site should have access to a cell phone or radio system to report a fire; and
- Everyone working on-site should have access to a pressurized air horn available to alert others in case of an emergency.



UTILITY WILDFIRE PREVENTION
ELECTRIC NETWORK

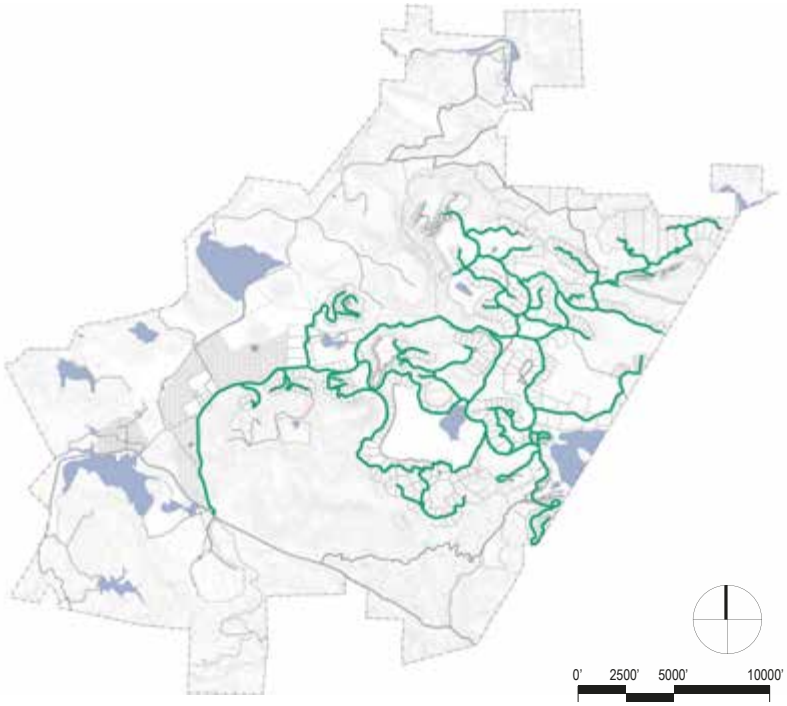


EXISTING OVERHEAD NETWORK

The existing power distribution network primarily relies upon overhead electrical lines, which can pose fire risk in the event of downed or sparking lines.

▲ **EXISTING SERVICE CONNECTION**

EXISTING OVERHEAD SERVICE LINES



PROPOSED UNDERGROUND NETWORK

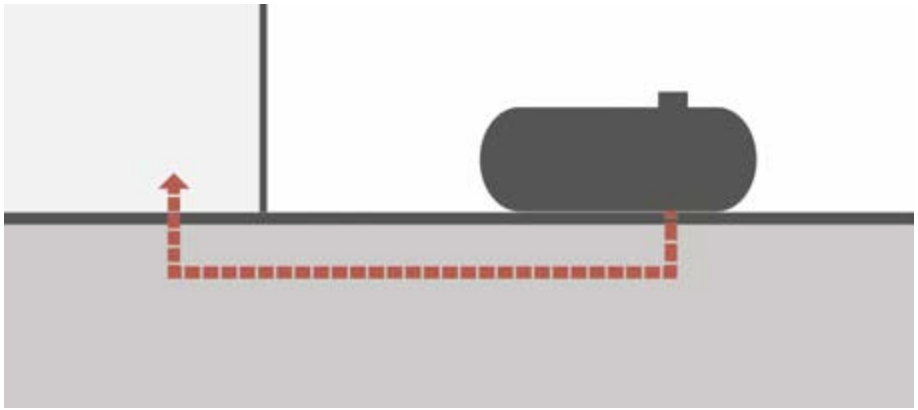
To the maximum extent feasible, the proposed electric network will be undergrounded in a joint trench system. This will ensure a safer distribution of power and reduce or eliminate the risk of overhead powerlines causing wildfires during windy conditions.

UNDERGROUND POWER AND DATA LINES

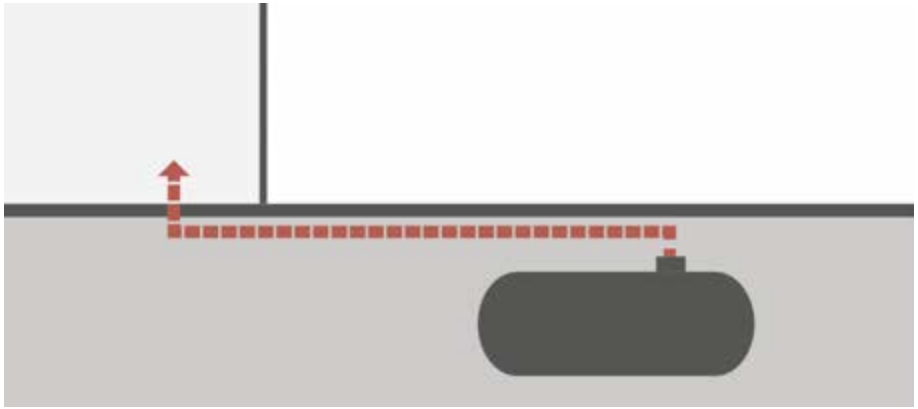
UTILITY WILDFIRE PREVENTION
PROPANE GAS SYSTEM

Similar to the strategy of undergrounding power lines, gas propane tanks will be undergrounded throughout the resort. This approach reduces the risk of gas related wildfires while also controlling for temperature fluctuations.

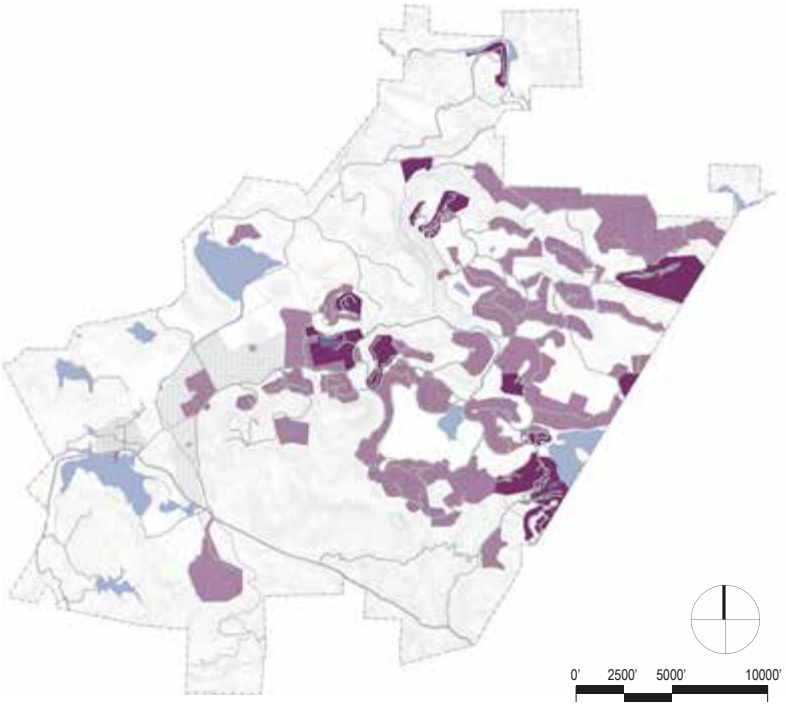
Each residential estate will be serviced by an individual underground gas tanks. Resort communities–which includes both resort and resort residential structures– will utilize a shared propane gas tank system with a localized underground distribution system.



TYPICAL ABOVE GROUND PROPANE TANKS
Above ground tanks are the standard and more affordable option, but present a greater risk of gas leaks and the potential to fuel wildfires.



PROPOSED UNDERGROUND PROPANE TANK
Propane tanks will be undergrounded to improve wildfire safety and benefit from the stabilized temperature control.



PROPOSED PROPANE GAS NETWORK
To the maximum extent feasible, propane gas tanks will be undergrounded throughout the resort, with residential estates serviced by individual tanks and resort communities serviced by shared tanks and distribution systems.

RESIDENTIAL ESTATES AND SUPPORTING FACILITIES SERVICED BY INDIVIDUAL UNDERGROUND TANKS

RESORT COMMUNITIES SERVICED BY SHARED UNDERGROUND TANKS

RESIDENTIAL LANDSCAPE WILDFIRE PREVENTION

SITE BUILDING & DETERMINE TOTAL DEFENSIBLE SPACE

If a wildfire occurs, it poses a considerable risk to residential homes and their occupants. Homeowners will be advised to implement various wildfire prevention strategies.

Site Structures to Reduce Fire Risk

The first step in addressing wildfire risk is to properly site residential structures. While the ideal residential structure location will be based on many factors (including views, accessibility, and privacy), residential property owners will be encouraged to closely consider certain criteria which reduces fire risk.

This includes siting buildings on the most level portion of the property. Wherever possible, residential structures should avoid being placed on mid-slopes, ridge edges, or directly between high points.

Determine Total Defensible Space

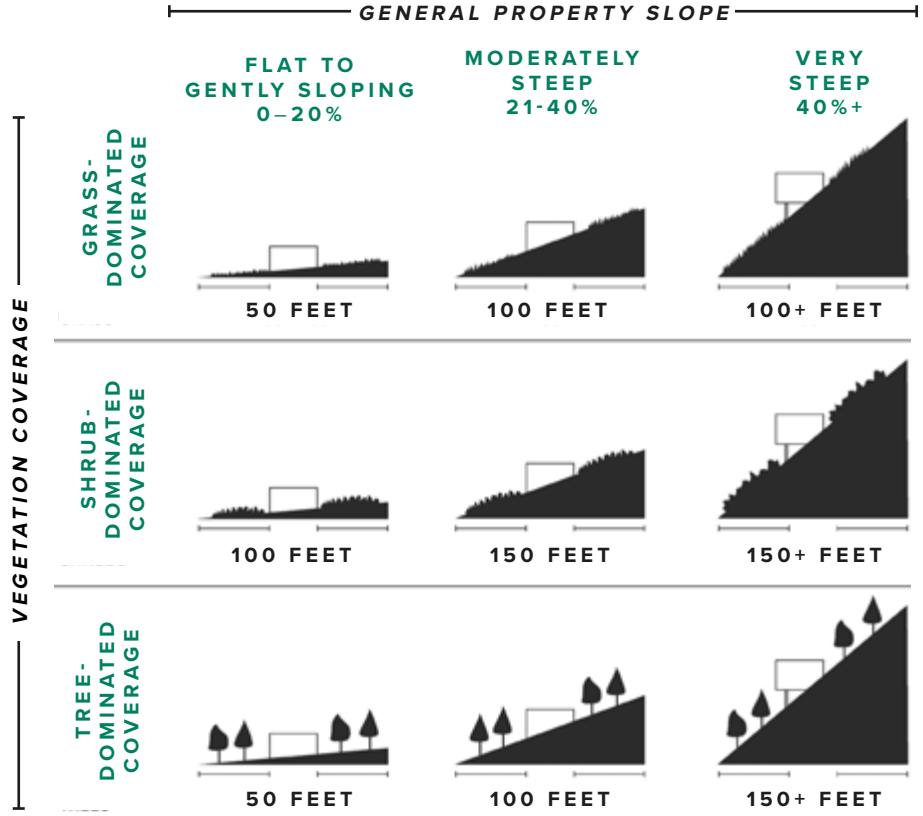
Homeowners will be advised to establish and maintain defensible space for the purposes of reducing fire risk in the immediate vicinity of the residential structure. The total defensible space will depend on the unique vegetated coverage and topographic conditions of each residential property (see right):

- **Grass-Dominated Coverage**
  Depending on slopes, 50 to 100 feet of total defensible space from the building edge in landscapes dominated by grasses, weeds, and widely scattered shrubs

- **Shrub-Dominated Coverage**
  Depending on slopes, 100 to 150+ feet of total defensible space from the building edge in landscapes dominated by shrubs, scrub, or chaparral

- **Tree-Dominated Coverage**
  Depending on slopes, 50 to 150+ feet of total defensible space from the building edge in landscapes dominated by trees; if understory is substantially shrubs, homeowners should follow “shrub-dominated coverage” category

Wherever necessary or possible, adjacent residential property owners and the resort ownership will cooperatively address defensible space concerns which cannot be fully established or maintained within the residential property line.



DETERMINING TOTAL DEFENSIBLE SPACE

The total defensible space will vary based on the unique vegetated coverage and topographic conditions of each property. In the above diagrams, the indicated length relates to the total defensible space measured from the building edge.

RESIDENTIAL LANDSCAPE WILDFIRE PREVENTION

DETERMINE DEFENSIBLE ZONES

Once the building has been sited and the total defensible space has been determined, homeowners will be advised to establish and maintain two zones of defense. These zones and associated fuel reduction strategies will reduce the risk of fire in the immediate vicinity of the residential structure:

- **Zone 1: Remove Flammable Vegetation**

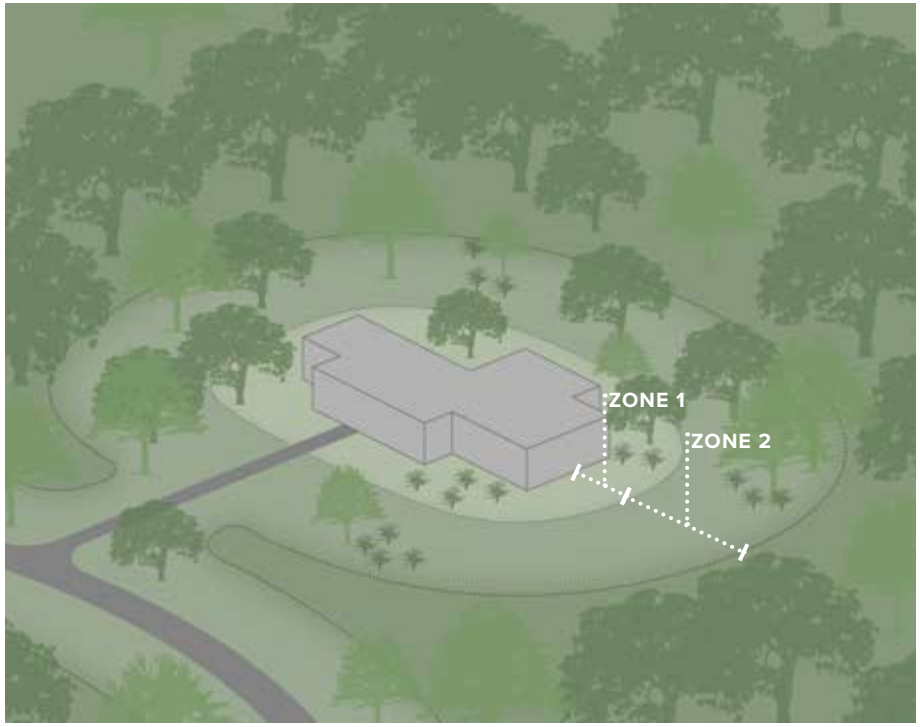
  Regardless of the total defensible space, the first defense zone will be maintained zero to 30 feet from the edge of the residential structure.

  Within this zone, flammable vegetation should be removed. This includes removing all standing dead trees and shrubs. All downed dead trees, tree branches, and shrubs should also be removed if not yet decayed. Trees should generally be pruned up to a height of 10 feet, depending on tree species and understory conditions. Flammable shrub species should be thoroughly pruned.

- **Zone 2: Reduce Flammable Vegetation**

  The second defense zone should be maintained from 30 feet from the building edge to the edge of the total defensible space (e.g. 50 feet, 100 feet, 150 feet–see previous page); this includes a defensible space of zero to 15 feet from the driveway edge.

  Within this zone, flammable vegetation should be reduced. Trees and shrubs should be selectively addressed to reduce flammable vegetation parts, including pruning dead or lower branches. Dead vegetation should also be selectively removed within this wider zone.



STANDARD RESIDENTIAL DEFENSIBLE ZONES

Two defensible zones should be established and maintained within the total defensible space.

ZONE 1 REMOVE FLAMMABLE VEGETATION

ZONE 2 REDUCE FLAMMABLE VEGETATION

RESIDENTIAL LANDSCAPE WILDFIRE PREVENTION
PREPARE THE PROPERTY

After the defensible space and zones have been determined, the residential property should be assessed for key fire risks. Primarily, continuous and dense vegetation creates a condition in which fires can quickly spread. Trees and shrubs should be vertically and horizontally separated in order to reduce “ladder fuel” conditions–or situations in which flames can easily move upwards from the vegetation understory to the canopy.

The following offers general vegetation clearance and spacing recommendations in order prepare the site for residential dwellings. Although these standards should be followed across the entire defensible space, greater adherence to these standards should be followed within Zone 1.

Tree and Shrub Vertical Clearance
In general, the lowest level of the canopy branches should be three times greater than the height of the vegetation understory. This vertical separation relationship can be established through either pruning the vegetation understory or the overhead tree limbs. For example, if a shrub is three feet in height, the lowest level of the directly overhead canopy branches would be trimmed or pruned to a height of 12 feet.

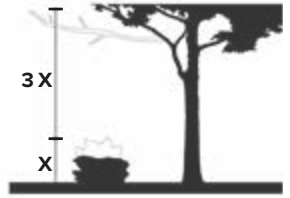
Tree and Shrub Horizontal Spacing
Individual or small clusters of trees and shrubs should generally be separated based on the horizontal spacing standards (see right) in order to reduce potential fire movement. For example, if a residential property is “moderately steep,” shrubs that are three feet in height should be separated by 12 feet. Note that the recommended tree and shrub horizontal separation distances are measured from the canopy edge, not the trunk.

LADDER FUELS

Flames burning at lower levels can ignite taller plants by moving up vegetated “ladder fuels”.

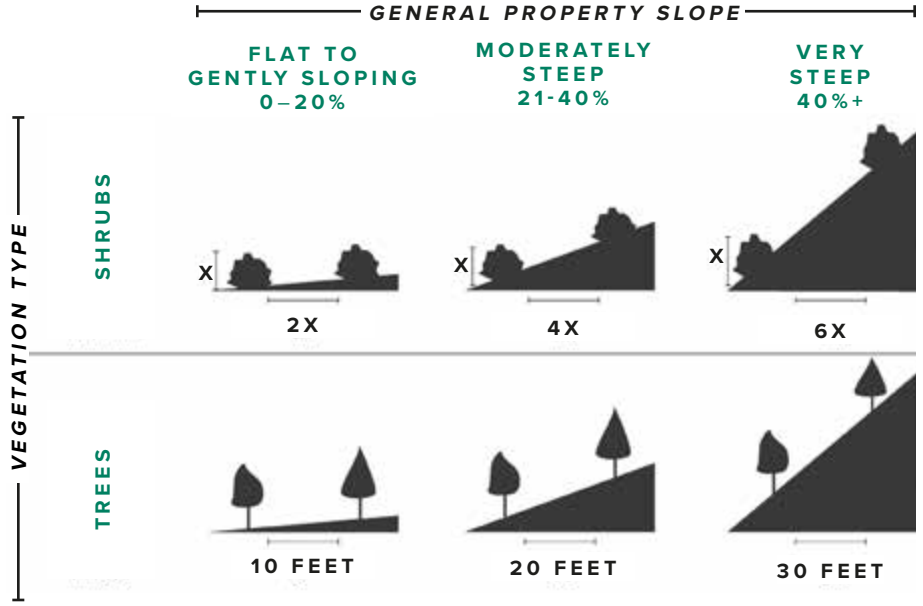
The potential for ladder fuels can be avoided by separating vegetation vertically and horizontally.

VERTICAL CLEARANCE



The lowest level of the canopy branches should be three times greater than the height of the vegetation understory.

HORIZONTAL SPACING



Individual or small clusters of trees and shrubs should be separated in order to reduce potential fire movement

RESIDENTIAL LANDSCAPE FIRE PREVENTION
ESTABLISH NEW LANDSCAPE

After the residential property has been cleared of flammable vegetation and ladder fuels have been addressed, various strategies can reduce wildfire risk where establishing a new landscape design.

Fire-Resistant Planting Design and Selection
New planting design should follow the spacing and clearance strategies delineated above. Planting designs and patterns should anticipate the mature size of new trees and shrubs. Simple, low-volume, and well-separated planting designs will generally achieve these spacing and clearance objectives. All efforts should be made to avoid tree limbs touching the residential structure or powerlines; tree limbs should also not be within 10 feet of the chimney.

Planting selection should avoid fire-prone species and instead prioritize fire-resistant species. In general, fire-resistant species are low-growing with a high moisture content and have stems or leaves that are not resinous, oily, or waxy.

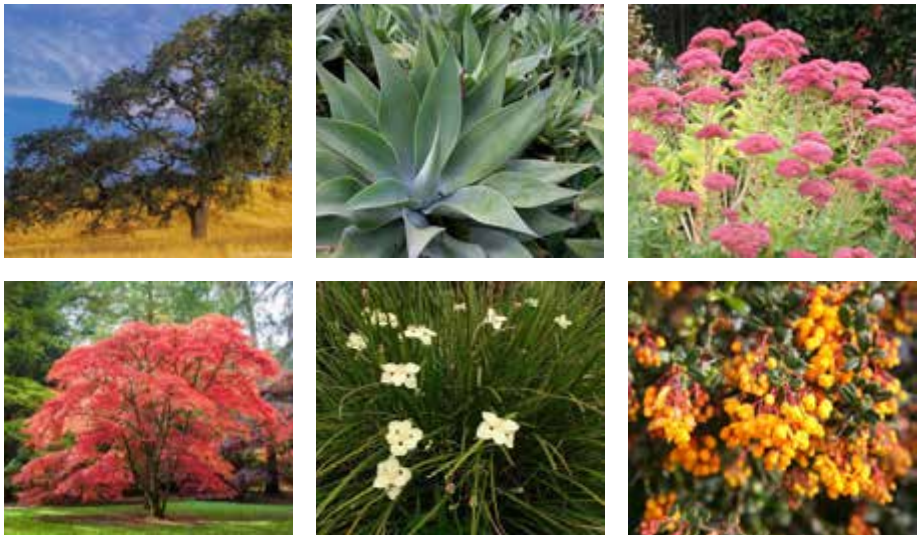
Small-Scale Fire Breaks: Hardscapes and Irrigation
Wherever possible, the landscape design should be configured to create a series of smaller-scale fire breaks in the immediate vicinity of the residential structure.

For example, driveways, walkways, patios, and parking areas could be selectively spread out to impede a potential fire path; non-combustible materials (such as mulch, boulders, and rocks) will additionally reduce fire risk. Pools, water features, ponds, or streams could also be creatively used as small-scale fire breaks. Irrigation systems used to establish or maintain landscapes could also create an irrigated fire break.

Additional Strategies
Additional landscape design strategies should be prioritized to reduce fire risk and improve emergency response. This includes the following:

- Constructing fencing with non-combustible materials, such as stone or metal, rather than wood;
- Enclosing areas below decks to reduce the risk of debris ignition;
- Clearly marking the address number on the house itself and at the driveway entry to aid in identification in the case of a fire emergency; and
- As much as possible, designing driveways and bridges to allow for large-scale emergency vehicle access.

FIRE PRONE PLANTING TO AVOID
Certain plants should be avoided because of their fire prone characteristics, such as resinous, oily, or waxy leaves. This includes trees such as the Eucalyptus.



FIRE RESISTANT PLANTING TO USE
Fire resistant plants should be used as much as possible. This includes plants that are low-growing and have a high moisture content.

RESIDENTIAL LANDSCAPE FIRE PREVENTION

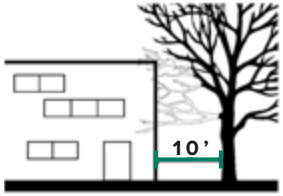
MANAGE LANDSCAPE TO REDUCE RISK

Various landscape management practices can address wildfire hazards within the residential landscape over time.

This includes the following recommendations for residential property owners:

- Periodically inspect the residential property to maintain defensible space—which includes ongoing removal and reduction of flammable vegetation and reestablishment of vegetation clearance and spacing standards;
- Prune tree limbs which are within 10 feet of buildings or chimneys or are otherwise encroaching on powerlines;
- Within the defensible space, trim tree limbs below 10 feet in height; for smaller trees, prune the lower 1/3 of the branches;
- Routinely mow grasses and wildflowers within the defensible space to a maximum height of 4 inches, particularly during dry seasons;
- Keep vegetation well-irrigated, particularly within the first defense zone;
- Where feasible, irrigation systems used for plant establishment should be maintained for additional wildfire protection;
- Install fine mesh metal on eaves, roofs, and vents to prevent embers from entering the structure;
- Remove vegetation debris that accumulates on the roof or within the rain gutters;
- Place combustible debris (such as firewood, wood scraps, grass clippings, leaf piles, or garbage cans) and propane tanks outside of the first defense zone; and
- Keep any ignitable outdoor furniture and equipment (i.e. wooden brooms and shovels) 10 feet away from the residential structure.

PRUNE, TRIM, AND MOW



PRUNE: Prune tree limbs which are within 10 feet of building or chimneys or are otherwise encroaching on powerlines.

TRIM: Within the defensible space, trim tree limbs below 10 feet in height; for smaller trees, prune the lower 1/3 of the branches

MOW: Mow and grass to a maximum of 4 inches in height.

LEAN, CLEAN, AND GREEN

LEAN: Minimize or eliminate the use of flammable vegetation and emphasize the use of low-growing herbaceous (non-woody) plants. Ornamental trees and shrubs should be kept green.

CLEAN: Remove all dead trees and shrubs within the defensible area. Remove all dead leaves, twigs, cones and branches. Reduce thick layers of pine needles to a depth of 2 inches.

GREEN: Keep plants green and healthy by irrigating throughout the fire season.

RESIDENTIAL BUILDING WILDFIRE PREVENTION

EXTERIOR BUILDING STRATEGIES

The fire safety of a building starts with design and material decisions. All residential buildings will abide by relevant California Building Codes “CBC” and Wildland Urban Interface “WUI” standards. The following are a selection of strategies to prevent fires on the building exterior:

1 | Class A rated roof with non-combustible covering
The roof is the most vulnerable part of the home in the event of a wildfire. Class A rated roofs are highly resistant to fire by minimizing the ability of flames to spread.

2 | Fire resistant eaves, overhangs, and soffits
The risk of embers getting caught in the eaves and igniting can be minimized by the eliminating or shortening overhangs, or otherwise constructing eaves, overhangs, and soffits with non-combustible materials.

3 | Building vents precautions
Vents in roofs, soffits, and exterior walls should be made of non-combustible materials with screens to prevent the penetration of embers.

4 | Underground utility connections
Wherever possible, utility connections should be undergrounded, particularly for electrical and fuel-related utilities.

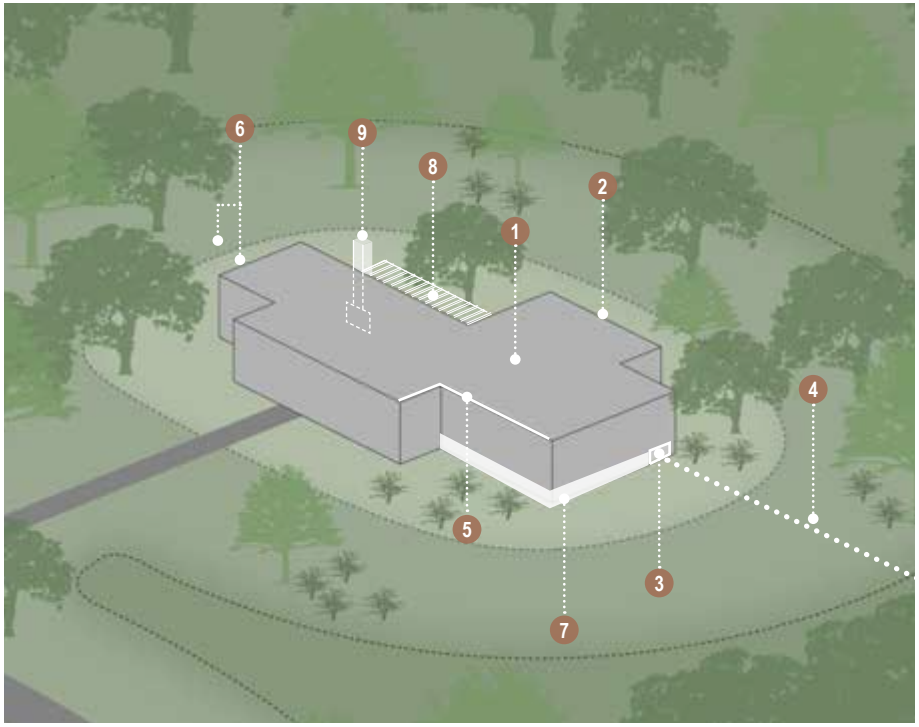
5 | Non-combustible leaf guards over gutters
Leaf guards can reduce the build-up of combustible leaf debris. Guards, gutters, and downspouts should be made of noncombustible material.

6 | Exterior fire suppression systems
Exterior fire suppression systems will be encouraged for all primary residential structures; these systems will be required for primary residential structures on dead-end roads that exceed ¼ mile in length. Fire suppression systems are remote or heat-activated. During a fire, they prevent substantial damage to the primary building as well as nearby outdoor features.

7 | Fire resistant material for exposed foundations
Fire resistant materials should be used for all exposed foundations above grade, including both open and closed foundations.

8 | Fire resistant deck materials
Decks connected to residential structures should be fire resistant, which can be achieved by using fire retardant treated timber, fire resistant plastic, and non-combustible materials for all deck components, including skirting to protect the deck underside.

9 | Exterior fire places and wood stoves
Anything with an exposed flame, such as a outside fireplace or wood stove, should have a screen built into the design to protect against stray embers.



RECOMMENDED EXTERIOR DESIGN STRATEGIES

The highlighted items are a selection of strategies to incorporate into the residential building to address wildfire safety.

1. CLASS A RATED ROOFS WITH NON-COMBUSTIBLE COVERING
2. FIRE RESISTANT EAVES, OVERHANGS, AND SOFFITS
3. BUILDING VENT PRECAUTIONS
4. UNDERGROUND UTILITY CONNECTIONS
5. NON-COMBUSTIBLE LEAF GUARDS OVER GUTTERS
6. EXTERIOR FIRE SUPPRESSION SYSTEMS
7. FIRE RESISTANT MATERIAL FOR EXPOSED FOUNDATIONS
8. FIRE RESISTANT DECK MATERIALS
9. EXTERIOR FIRE PLACES AND WOOD STOVES

SOURCE: FEMA, Home Builder’s Guide to Construction in Wildfire Zones, 2008

RESIDENTIAL BUILDING WILDFIRE PREVENTION
INTERIOR BUILDING STRATEGIES

On the inside of residential structures, certain precautions and practices can further protect the home. The following are a selection of interior building strategies to reduce wildfire risk:

1 | Smoke detectors throughout the home
Smoke detectors should be located throughout the house to cover all livable areas. If placed in hallways between living and sleeping areas, smoke detectors can reach many rooms. In addition, smoke detectors shall be programmed to communicate directly to a fire and security monitoring companies.

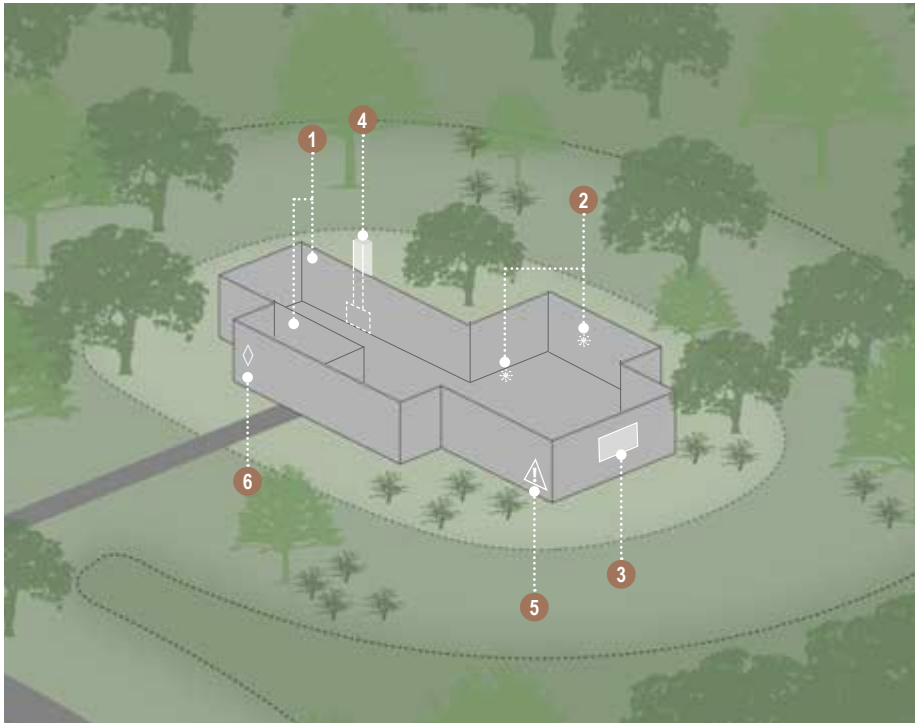
2 | Interior fire sprinklers
Interior fire sprinklers come in a variety of styles in order to blend with the home's aesthetic. They are automatically activated by high heat and can include a warning system.

3 | Window security quick-release
If window security bars or other protection systems are installed, a quick-release system should be included to allow for immediate escape in the case of a wildfire emergency.

4 | Chimney maintenance
Chimneys should be inspected yearly to remove all flammable debris and material.

5 | Combustible hazardous material protection
All combustible materials should be stored in protected safety containers away from appliances with ignition sources, such as stoves and water heaters.

6 | Wildfire fighting tools
Homeowners should have easy access to wildfire emergency tools, such as a shovel, hoe, rake, and bucket.



RECOMMENDED INTERIOR DESIGN ELEMENTS

The fire safety of a structure starts with design decisions. The highlighted items are a selection of some strategies to incorporate into residential architecture.

1. SMOKE DETECTORS THROUGHOUT THE HOUSE
2. INTERIOR FIRE SPRINKLERS
3. WINDOW SECURITY QUICK-RELEASE
4. CHIMNEY MAINTENANCE
5. COMBUSTIBLE MATERIAL PROTECTION
6. WILDFIRE FIGHTING TOOLS

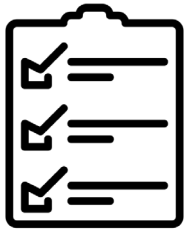
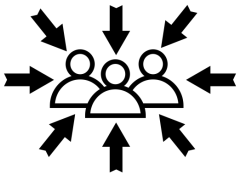
WILDFIRE PREVENTION PREPAREDNESS

RESIDENT RECOMMENDATIONS

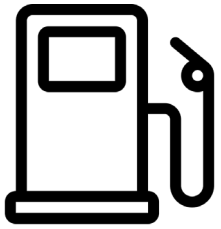
Homeowners will be advised to plan for the event of a wildfire. This will require preparing in advance and developing specific action plans for different scenarios.





Pre-Fire Preparations

- Develop an emergency plan with your family;
- Place important documents in a fire-proof box close to the exit;
- Practice how to shut off key utilities, including water, gas, and electricity;
- Discuss plans for evacuation, including what to bring and where to go;
- Determine multiple evacuation routes in case one is blocked;
- Develop a communication plan in case your family is separated;
- Select meeting places a safe distance the home; and
- Identify a non-local contact person who knows your emergency plan.

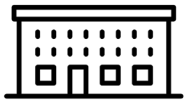


Potential Fire Threat (including Red Flag Warnings)

- Pay attention to local news for updates and evacuation notices;
- Keep flashlights and portable chargers ready in case of power shutoff;
- Ensure that your car has gas, as stations often become crowded;
- Confirm that all garden hoses are attached and accessible;
- Prop a ladder against the house for the potential need for roof access;
- Disable electronic garage openers so this area can be manually opened;
- Prepare and pack essential items to prepare for potential evacuation; and
- Gather pets in kennel of on leashes to keep them close and safe

Notice to Evacuate

- Stay together as a household and remember that time is of the essence;
- Dress appropriately with long pants/sleeves, layers, and face protection;
- Shut off the home's gas supply, but leave lights and water on;
- Close all doors and windows but leave exterior doors unlocked;
- Pack water, supplies, and other essentials in the car;
- Ensure all car windows are closed while evacuating;
- Choose evacuation routes selected by emergency personnel; and
- Follow all directions and signage provided by emergency personnel.



Shelter in Place

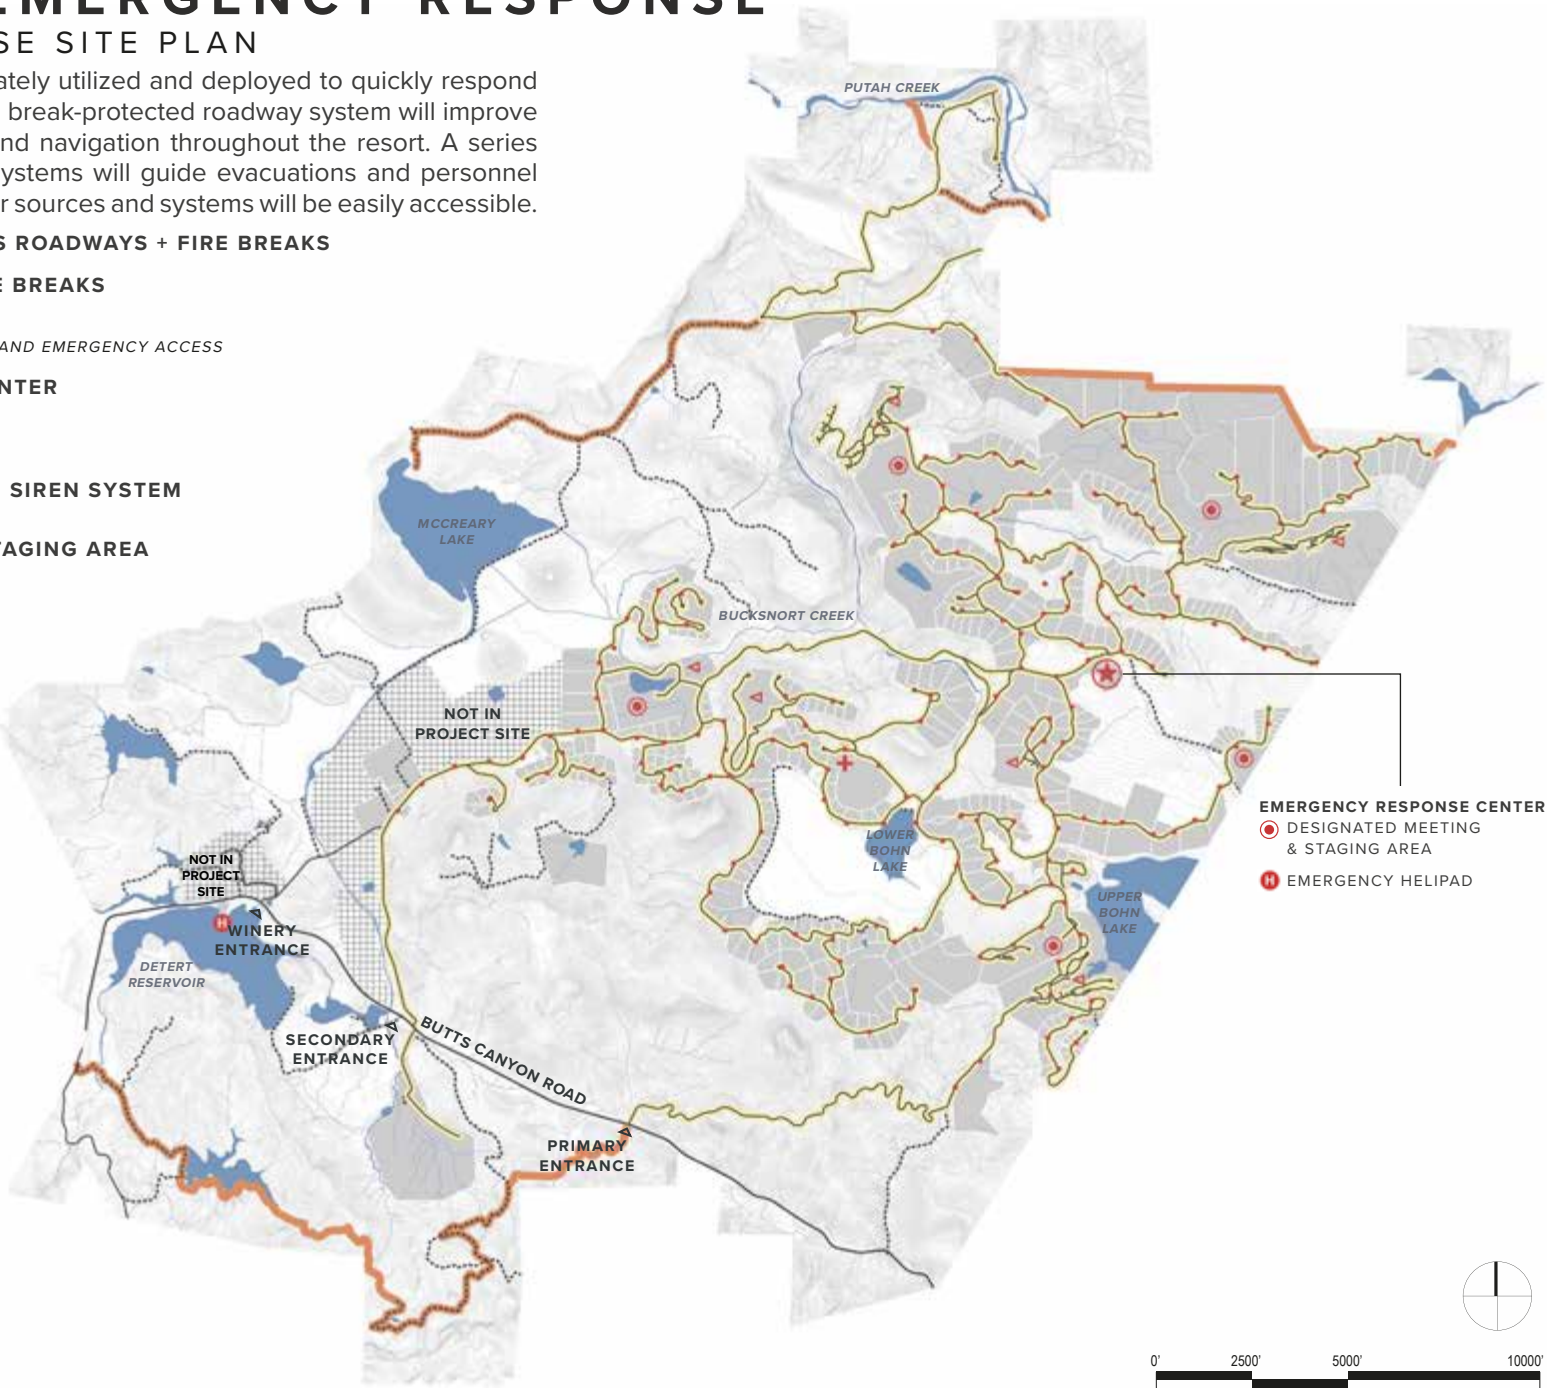
- Take shelter within a building whenever possible;
- Close all windows and doors, but leave unlocked;
- Remain close to the front door and low to the ground;
- Continue to monitor the fire and stay observant;
- If not at home, proceed to a designated meeting & staging area;
- If unable to reach either home or a designated meeting & stage area, park and take shelter in your car;
- If in the car, stay on paved roads and park away from vegetation; and
- Leave headlights and emergency flashers on while you wait for aid.

WILDFIRE EMERGENCY RESPONSE

WILDFIRE RESPONSE SITE PLAN

Various systems will be immediately utilized and deployed to quickly respond to a wildfire emergency. The fire break-protected roadway system will improve emergency personnel access and navigation throughout the resort. A series of emergency communication systems will guide evacuations and personnel response. Fire suppression water sources and systems will be easily accessible.

- **PRIMARY TWO-WAY ACCESS ROADWAYS + FIRE BREAKS**
- **PROPERTY BOUNDARY FIRE BREAKS**
- **EXISTING RANCH ROADS**
  USED FOR ACTIVE FUEL REDUCTION AND EMERGENCY ACCESS
- **EMERGENCY RESPONSE CENTER**
- **EARLY DETECTION SYSTEM**
  HIGH-DEFINITION CAMERA
- **EMERGENCY NOTIFICATION SIREN SYSTEM**
  EXACT LOCATIONS TBD
- **DESIGNATED MEETING & STAGING AREA**
- **HELIPAD**
- **FIRE HYDRANTS**
- **WATER SOURCES**
  RESERVOIRS, LAKES, PONDS, CREEKS & STREAMS



WILDFIRE EMERGENCY RESPONSE

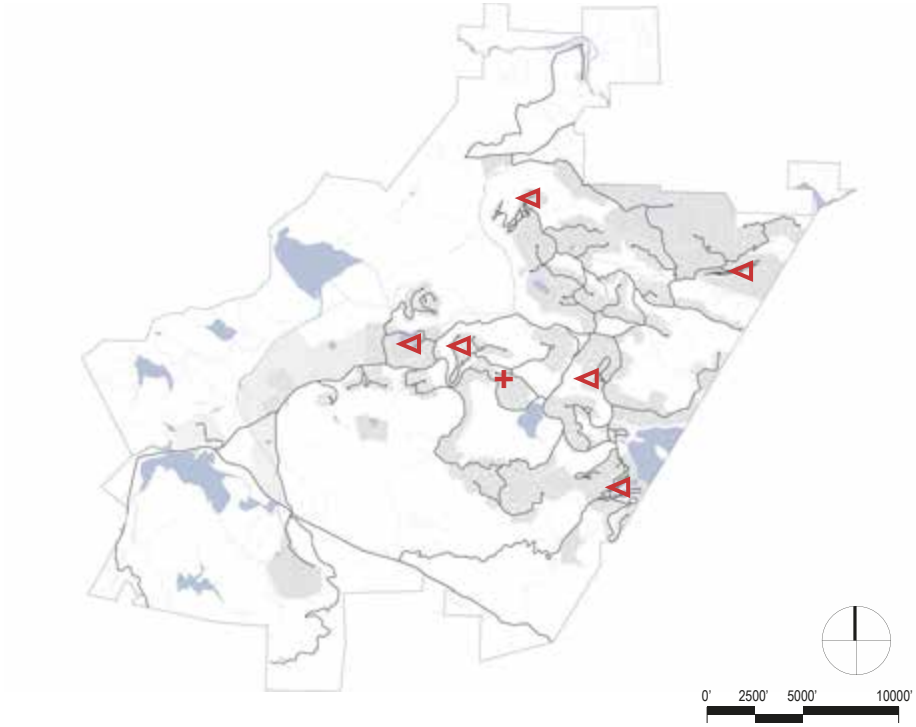
WILDFIRE EMERGENCY DETECTION & COMMUNICATION SYSTEMS

Efficient emergency communication is critical for providing immediate information to residents, visitors, and employees. In the event of a wildfire emergency, the following detection and communication systems will quickly be deployed:

Early Detection System
An early detection system will immediately identify potential fires igniting on site or in the vicinity. This system includes a high-definition camera installed in the center of the resort.

Emergency Notification Siren System
Located throughout the resort, the siren system will alert people to a wildfire emergency and announce updated information and directions.

Opt-out Communication System
All residents, visitors, and employees will be enrolled in an opt-out phone-based communication system, such as Nixle, to receive emergency notifications. This system will supplement the site-wide emergency siren system to ensure that everyone is alerted of important emergency information and updates.



COMMUNICATION RESPONSE SYSTEM

Key communication technologies will aid in detecting and communicating wildfire emergencies.

+ **EARLY DETECTION SYSTEM**
HIGH-DEFINITION CAMERA

◁ **EMERGENCY NOTIFICATION SIREN SYSTEM**
EXACT LOCATIONS TBD

WILDFIRE EMERGENCY RESPONSE

WILDFIRE EMERGENCY RESPONSE CENTER & REFUGE AREAS

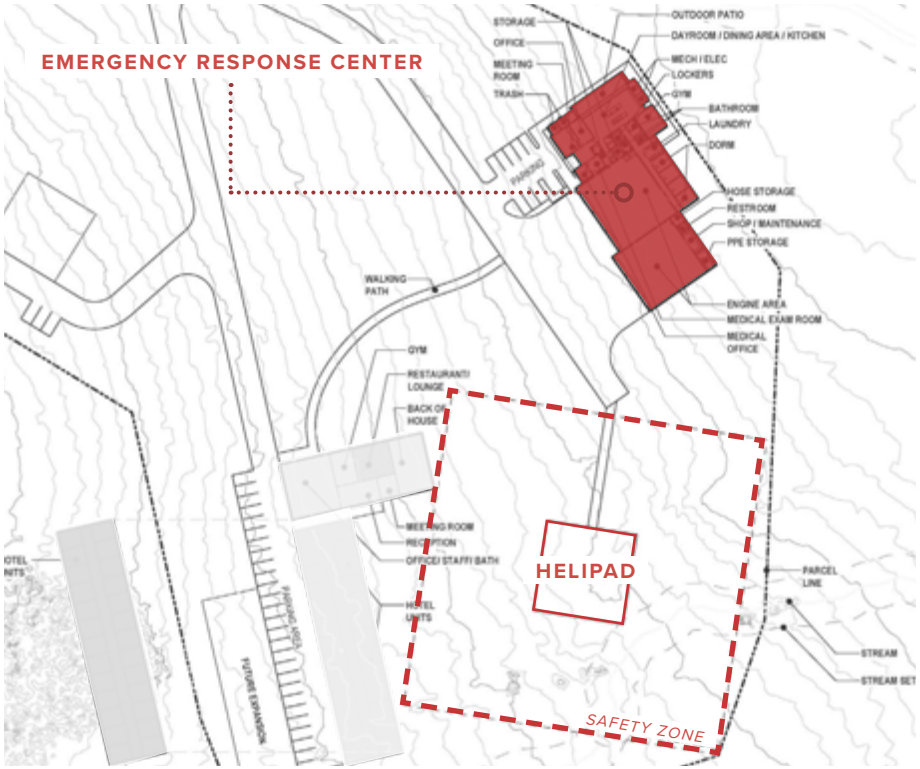
Various areas of the site will play a pivotal role in servicing evacuees and emergency personnel in the case of wildfire emergency.

Emergency Response Center

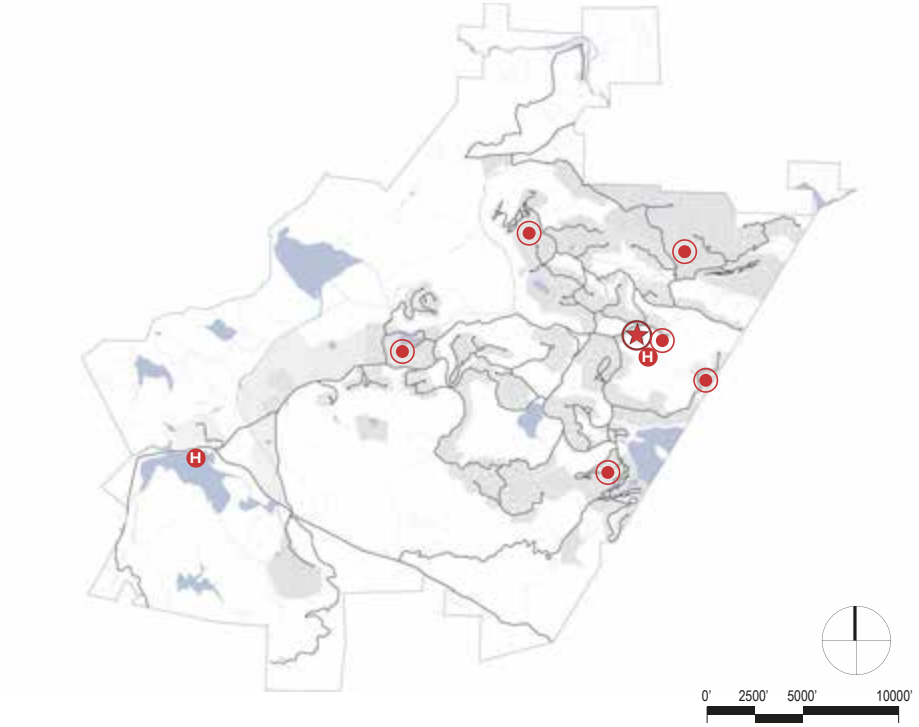
The on-site Emergency Response Center will serve as a primary location for first responders to gather and coordinate efforts. The center will include essential fire-fighting equipment and minor medical supplies. In the case of a major wildfire, the center can act as a headquarters for operations. A helipad will be located on-site for emergency landings and take-offs; and additional helipad at Detert Reservoir can also be used during emergencies

Designated Meeting & Staging Areas

Depending on the circumstances of a wildfire emergency, it may be difficult to evacuate. In this situation, residents, visitors, and employees will be directed to gather at designated meeting & staging areas where they will be provided information and assistance.



EMERGENCY RESPONSE CENTER SITE PLAN



EMERGENCY RESPONSE CENTER & MEETING POINTS

The emergency response center is located in a centralized area to service the entire site; temporary meeting points are dispersed throughout the site in order to provide easily accessible locations for all residents, visitors, and employees.

- **EMERGENCY RESPONSE CENTER**
- **HELIPADS**
- **DESIGNATED MEETING & STAGING AREAS**

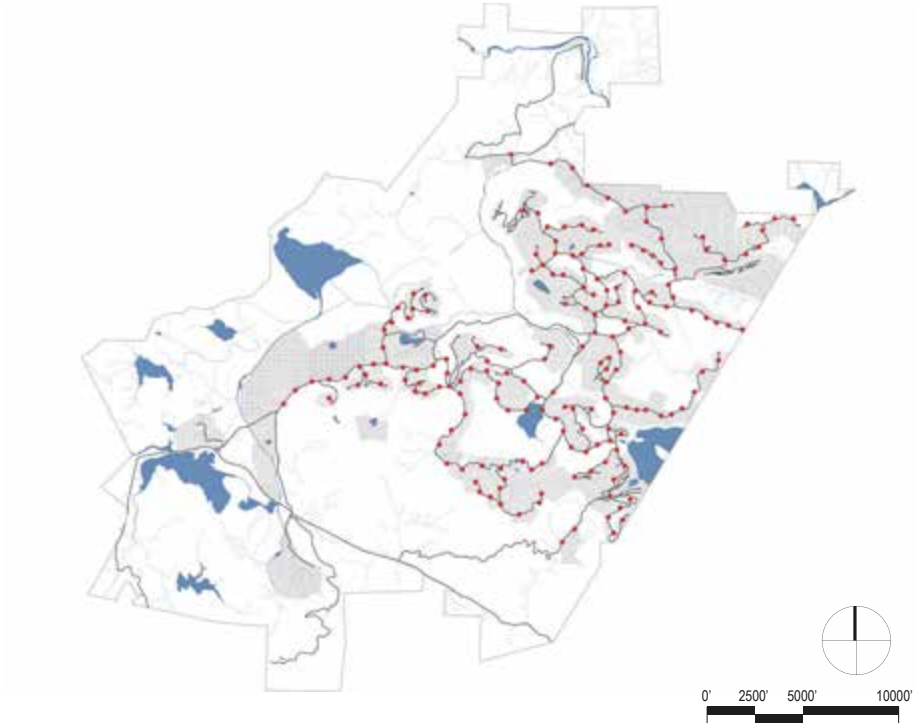
WILDFIRE EMERGENCY RESPONSE
WILDFIRE WATER SUPPLY & SUPPRESSION SYSTEM

If wildfires occur, a comprehensive, on-site water supply and fire suppression system will service firefighting needs.

Fire Suppression Water Sources
Fire suppression systems will be serviced by reclaimed and non-potable water sources, such as recycled wastewater, non-treated groundwater, and surface water reservoirs. Surface water sources—including reservoirs, lakes, ponds, creeks, and streams—can also be drawn upon by fire engines or helicopter buckets in the case of a wildfire emergency.

Fire Suppression Water System
A connected non-potable water distribution system will supply all water to fire hydrants as well as interior and exterior fire suppression systems. Portions of the system will be designed as a loop to maximize flow. Booster pump systems will also maintain water pressure above minimum requirements. Additional water storage may also be established in areas further from water sources for wildfire emergencies.

Fire Hydrants
All hydrants will have the capacity to maintain a minimum of a two-hour flow. Hydrants will be located within close proximity to roadways and spaced to maintain required flow to all parts of the site.



WILDFIRE WATER SUPPLY & SUPPRESSION SYSTEM
A network of fire hydrants and surface water sources will service the entire site.

- **FIRE HYDRANTS**
- **WATER SOURCES**
  RESERVOIRS, LAKES, PONDS, CREEKS & STREAMS

INTRODUCTION

This report presents the results of our preliminary geotechnical study for the proposed Maha Resort at Guenoc Valley to be constructed at 22000 Butts Canyon Road in Middletown, California. The project includes dozens of parcels totaling approximately 16,000 acres. The terrain varies from relatively level valley floor areas to rolling hills and contains several lakes, established vineyards, and vast undeveloped areas. The site location is shown on Plate 1 in Appendix A.

We understand that the planned Maha Resort at Guenoc Valley will be an extensive, multi-phased resort including boutique hotels, residential communities, farmstead, golf course, equestrian facilities, and shops. As outlined in our proposal dated May 24, 2019, our preliminary study was broken into two phases. The purpose of Phase 1 was to evaluate the geologic hazards and pertinent geologic features and characteristics within certain proposed areas of development, and to comment on the geotechnical feasibility of the project. The purpose of Phase 2 was to refine the geologic hazards by collection of samples and testing for naturally-occurring asbestos (NOA) in areas that we identified as potentially containing serpentinite bedrock, landslide areas, and/or areas selected by the project team.

SCOPE

Our scope of work for Phase 1 was limited to a site reconnaissance, a review of selected published geologic data, aerial photographs and LiDAR, and preparation of this report. Our scope of work for Phase 2 included collection of samples and testing for NOA (see Appendix B). Based on the geologic literature review (References, see Appendix C), site reconnaissance, limited subsurface exploration and laboratory testing, we were to develop the following information:

1. A brief description of geologic, surface soil, and seepage/spring or other conditions observed during our reconnaissance;

2. Our opinion of potential cut and fill slope inclinations;

3. Distance to nearby active faults and a discussion of geologic hazards that may affect the proposed project;

4. Our opinions regarding the geotechnical feasibility of the project; and

5. Preliminary conclusions and recommendations concerning site-specific geotechnical services needed for actual development, design and construction of the project.

SERVICES PROVIDED

We reviewed aerial photographs of the site, 2-foot LiDAR contours of the entire property, and other select published geologic information pertinent to the site. A list of the geologic references reviewed is presented at the end of this report. On October 8, 9, 10, and November 12 and 20, 2018, our Engineering Geologist conducted a surficial reconnaissance of the property to observe exposed topographic features, surface soils, rock outcroppings and cut banks. We also excavated test pits on these days for the collection of preliminary geotechnical information and to assess the presence of NOA in areas mapped as serpentine-bearing. The test pit locations are shown on Plates 2 and 4A through 4E. Our Principal Engineering Geologist and Principal Geotechnical Engineer also performed a brief site reconnaissance of selected areas on October 8, 2018. Selected samples were laboratory tested to assess their pertinent engineering characteristics and potential presence and concentration of NOA. In addition to the test pits for our preliminary evaluation of the property, additional test pits were excavated for the Farmstead and access road geotechnical studies that were being performed concurrently. The logs for these test pits are included herein.

SITE CONDITIONS

General

Lake and Napa Counties are located within the California Coast Range geomorphic province. This province is a geologically complex and seismically active region characterized by sub-parallel northwest-trending faults, mountain ranges and valleys. The oldest bedrock units are the Jurassic-Cretaceous Franciscan Complex and Great Valley sequence sediments originally deposited in a marine environment. Subsequently, younger rocks such as the Tertiary-age Sonoma Volcanics group, the Plio-Pleistocene-age Clear Lake Volcanics and sedimentary rocks such as the Guinda, Domengine, Petaluma, Wilson Grove, Cache, Huichica and Glen Ellen formations were deposited throughout the province. Extensive folding and thrust faulting during late Cretaceous through early Tertiary geologic time created complex geologic conditions that underlie the highly varied topography of today. In valleys, the bedrock is covered by thick alluvial soils. The site is located in a northwest-trending, structurally-system of valleys and ridges in southeastern Lake county and northwestern Napa County.

Geology

Published geologic maps (Fox et al., 1973) indicate the property is underlain by igneous, sedimentary, and metamorphic bedrock formations ranging from Jurassic to Quaternary in age. The oldest bedrock formations mapped within the project area are the Jurassic Knoxville Formation, the Cretaceous-Jurassic Great Valley Sequence and Franciscan Assemblage. The Knoxville Formation is comprised mainly of massive clayey siltstone with minor sedimentary serpentine, and is mapped primarily within the valley walls of Bucksnort Creek, and in an isolated area south of Butts Canyon Road. The Great Valley Sequence units shown to be present in the project area include mudstone, siltstone, and sandstone. The mapped Franciscan Assemblage outcrops include metagraywacke, metagreenstone, and metachert,

with discrete masses of serpentinite and silica-carbonate rocks strewn throughout the property. One of the predominant rock types present is the Tertiary Clear Lake volcanics olivine basalt. This resistant unit caps the many resistant knobs and ridges throughout the property such as Snell Peak, Goat Hill, Jim Davis Peak, and similar topographic high points. It also blankets a vast, northwest -trending swath north of Upper Bohn Lake and extending to the edge of Bucksnort Creeks valley. It is usually underlain by small bodies of Franciscan silica-carbonates and large masses of Franciscan serpentinite, the other dominant rock type according to the geologic maps. The Tertiary-aged Sonoma Volcanics occurs south of Butts Canyon Road at higher elevations. The valley floors throughout the project area, such as Bohn Valley and the low areas directly south of McCreary Lake, are blanketed by Quaternary alluvium, the youngest unit consisting of unconsolidated gravel, sand, silt, and clay.

Landslides

Published landslide maps (Dwyer, 1976) indicate many isolated areas of large-scale slope instability at the site. Presented on Plate 3 is our interpretation of the locations presented on Dwyer's map. Dwyer's "definite" and "probable" landslides primarily occur within areas mapped by Fox et al. (1973) as Franciscan Assemblage including metagraywacke, metagreenstone, metachert, and bodies of serpentine. We outlined these, as well as other areas with suspicious topographic features we observed using LiDAR, on the LiDAR overlay in Google Earth. Our engineering geologists then excavated test pits in several of the areas where planned roads crossed the mapped landslide areas and other suspicious areas based on our LiDAR review. In some cases, the rubbly surface outcrops and "float" (boulders carried downslope by gravity) prevented excavator access to these areas, such as on the northeastern flank of Goat Mountain. Based on our surface and subsurface observations we revised the landslide mapping. Where these physical areas were observed and revised by RGH, the landslide boundaries are considered approximate. We have not undertaken detailed studies of the individual landslide areas. The scope of this phase of investigation was to confirm or refute the presence of actual landslide debris in certain mapped and conspicuous locations that could directly affect road construction at the site. The revised features are presented on Plates 4A through 4E.

A summary of the subsurface soil, rock, and groundwater conditions found within landslide test pits LSTP-1 through LSTP-25 is presented in the table below. In some cases, our subsurface observations indicate that no landslide was present. Where we interpret the deposits as landslide-derived, our opinion as to the type of landslide, degree of certainty, thickness of deposits, and state of landslide activity is indicated with a 4-digit number in the right-hand column of the table. A key to the numerical landslide identification and nomenclature is given on Plate 5. The soil is described in accordance with the Unified Soil Classification System, outlined on Plate 6. Bedrock is described in accordance with Engineering Geology Rock Terms, shown on Plate 7.

Test Pit #	Depth (ft.)	Description	Landslide Type
LSTP-1	0.0-1.0	DARK BROWN SANDY CLAY WITH GRAVEL (CH) soft, moist (surface soil)	
	1.0-4.75	GRAY GREEN MOTTLED CLAY WITH SAND (CH) soft to medium stiff, moist (Qls)	Possible Landslide

		- possible slide plane -	3312
	4.75-6.5	DARK GRAY GREENSTONE very closely spaced fractures, firm, weak, moderately weathered Seepage at 6 feet	
LSTP-2	0.0-1.25	BROWN SANDY CLAY (CH) soft to medium stiff, moist (surface soil)	
	1.25-5.0	DARK GRAY GREENSTONE closely spaced fractures, firm to moderately hard, weak to moderately strong, slightly weathered	No Landslide
LSTP-3	0.0-1.5	RED-BROWN CLAY WITH SAND (CH) hard, dry to moist, weak and porous to 6 inches, with gravel and cobbles up to 6 inches in diameter, vertical pressure facets (VPF) Qls	
	1.5-3.5	RED-BROWN BRECCIA closely spaced fractures, moderately hard, moderately strong, highly weathered, subangular, poorly sorted clasts from coarse sand to small cobbles, volcanic and ultramafic (healed landslide/Qls)	3323
	3.0-3.5 (locally)	OLIVE GREEN SANDY CLAY (CH) very hard, dry, with gravel Practical refusal at 3½ feet	
LSTP-4	0.0-2.5	RED BROWN SANDY CLAY (CL) very stiff to hard, dry, weak and porous to 6 inches, gravel to 2 inches in diameter, somewhat porous (colluvium)	
	2.5-3.5	RED-BROWN CLAY WITH SAND AND GRAVEL (CH) hard, moist, increased gravels and cobbles, angular, poorly sorted (colluvium)	3323
	3.5-10.0	DARK RED-BROWN BRECCIA no visible fractures, firm, weak, highly weathered, poorly sorted angular to subrounded polished clasts (healed landslide/Qls)	
LSTP-5	0.0-2.0	BROWN TO DARK BROWN CLAY WITH SAND (CL-CH) medium stiff, dry to moist, with coarse sand to gravel, weak and porous to 6 inches, roots to 2 feet (Qls)	
	2.0-5.0	DARK BROWN CLAY WITH SAND AND GRAVEL (CH) hard to very hard, moist, with VPF and shearing from creep, angular gravels to 2 inches in diameter (Qls)	3323
	5.0-9.0	DARK BROWN SANDY CLAY TO CLAYEY SAND (CH) hard/dense, moist, poorly sorted, clay less fat than B unit, coarse sand and small gravels, larger cobbles to 6 inches in diameter starting at 8 feet (Qls)	

	9.0-9.5	GRAY ANDESITE closely spaced fractures, very hard, very strong, slightly weathered, soil infilling Refusal in boulders at 9½ feet	3323
LSTP-6	0.0-2.0	BROWN TO DARK BROWN SANDY CLAY WITH GRAVEL AND COBBLES (CH) soft, dry, weak and porous to 1 foot; hard, moist 1 to 2½, cobbles and clasts to 8 inches in diameter (Qls)	
	2.0-4.5	RED -BROWN BRECCIA no visible fractures, firm, weak, highly weathered, clasts poorly sorted, angular, coarse sand to cobbles 6 inches in diameter (well-indurated/healed Qls)	3213
	4.5-7.0	RED-BROWN SERPENTINIZED GREENSTONE closely spaced fractures, firm, weak, completely to highly weathered	
LSTP-7	0.0-0.5	LIGHT OLIVE-BROWN CLAY (CH) medium stiff, dry, with desiccation cracks, weak and porous	
	0.5-4.0	DARK OLIVE GRAY SILTSTONE/SHALE closely laminated, extremely closely spaced fractures, moderately hard to hard, weak, moderately weathered to brown, dips into hillside; completely weathered to soil-like from ½ to 1 foot	No Landslide
	4.0-5.0	DARK GRAY SANDSTONE massive to thickly bedded, moderately spaced fractures, hard to very hard, strong, slightly weathered, very fine grained	
LSTP-8	0.0-0.5	LIGHT OLIVE-BROWN CLAY (CH) medium stiff, dry, with desiccation cracks, weak and porous	
	0.5-2.0	RED-BROWN CLAY WITH GRAVEL AND COBBLES (CH) very stiff to hard, moist, angular cobbles to 6 inches in diameter, some roots (Qc/residual soil)	Outside of Landslide
	2.0-2.5	DARK GRAY CLAY WITH SAND (CH) very stiff, dry to moist, with shale inclusions (Qls)	3322
	2.5-5.0	DARK OLIVE GRAY SILTSTONE/SHALE closely laminated, extremely closely spaced fractures, moderately hard to hard, weak, moderately weathered to brown, sheared	
LSTP-9	0.0-1.0	LIGHT OLIVE-BROWN CLAY (CH) medium stiff, dry, with desiccation cracks, weak and porous, with angular gravels and cobbles, roots	
	1.0-2.0	DARK GRAY SHALE crushed, sheared, firm, plastic, completely weathered to soil (residual/colluvium/Qc)	Outside of Landslide 3221

	2.0-5.0	DARK OLIVE GRAY SILTSTONE/SHALE closely laminated, extremely closely spaced fractures, sheared, firm, friable, highly weathered to brown, with strong concretions	
LSTP-10	0-1.0	OLIVE BROWN SANDY CLAY (CH) hard, dry, with gravel, with roots (Qls)	
	1.0-5.75	DARK OLIVE BROWN TO DARK OLIVE GREEN CLAY WITH GRAVEL AND COBBLES (CH) very hard, moist, very hard and very strong angular clasts of greenstone from 1 to 8 inches in diameter (Qls)	3122
	5.75-6.5	OLIVE GREEN CLAY WITH SAND (CH) hard, moist, sheared, slicks, healed slide plane	
	6.5-7.5	GREEN SERPENTINE MELANGE sheared, soft to firm, plastic to friable, highly weathered	
LSTP-11	0.0-2.5	RED CLAY WITH SAND (CH) (Qls) soft to hard, weak and porous to ½ foot, dry ½ to 2 feet then moist	
	2.5-3.0	DARK OLIVE-GREEN CLAY (CH) hard, moist, sheared, with slicks, irregular edges, locally pinched out (healed side plane) (Qls)	3312
	3.0-5.0	OLIVE GREEN WITH RED WEATHERING SERPENTINTE MELANGE firm, friable, highly weathered, with hard, strong, greenstone inclusions	
LSTP-12	0.0-1.0	BROWN CLAY (CH) stiff, dry to moist, with angular volcanic cobbles to 6 inches in diameter, weak and porous, with roots (Qc) (Qls)	
	1.0-3.5	RED BROWN CLAY (CH) hard, moist, with coarse sand and volcanic cobbles approximately 6 inches in diameter from 2½ to 3½ feet, with roots at base of layer (Qls)	Question-able 3312
	3.5-5.0	RED-BROWN SANDY CLAY (CL-CH) very hard, dry to moist, with sand to small cobbles and volcanic gravels (completely weathered lithic tuff)	
	5.0-7.0	YELLOW-GREEN LITHIC TUFF closely to very closely spaced fractures, firm, friable, highly weathered	
LSTP-13	0.0-3.0	GRAY BROWN SANDY CLAY WITH GRAVEL AND COBBLES (CH) stiff to very stiff, dry to moist, shrinkage crack ½ inch wide and 12 inches deep	
	3.0-4.0	RED BROWN SANDY CLAY WITH COBBLES (CH) very stiff, moist, with volcanic and greenstone cobbles	3312
	4.0-5.5	GRAY GREEN SERPENTINITE	

		Closely to very closely spaced fractures, firm, weak to friable, moderately weathered	
LSTP-14	0.0-1.5 1.5-2.5 2.5-5.0	RED-BROWN CLAY WITH SAND AND GRAVEL (CL) soft to medium stiff, dry to moist, weak and porous, with angular volcanic cobbles to 1½ feet (Qc) RED-BROWN CLAY (CH) hard, moist (residual soil) SERPENTINIZED GREENSTONE extremely closely spaced fractures, moderately hard, weak, highly weathered	No Landslide
LSTP-15	0.0-4.0 4.0-7.0	RED BROWN SANDY CLAY WITH COBBLES AND BOULDERS (CH) very stiff, moist, porous in upper 1 foot GREEN SERPENTINITE closely spaced fractures, firm, weak, moderately weathered	3212
LSTP-16	0.0-1.0 1.0-3.5 3.5-4.5	BROWN CLAY WITH SAND (CH) soft to medium stiff, dry, with cobbles and small boulders, with boulder float at surface (Qc/Qls) BROWN CLAY WITH SAND AND GRAVEL (CH) hard, moist, with prominent VPF, angular volcanic cobbles (Qls) BROWN CONGLOMERATE no visible fractures, moderately hard, moderately strong, moderately to highly weathered, serpentinite clasts (KJF)	3212
LSTP-17	0.0-1.5 1.5-3.0 3.0-5.0	BROWN SANDY CLAY (CH) soft to medium stiff, dry to moist, with desiccation cracks, with roots, weak and porous to ½ foot, with boulder float at surface (residual soil) GREEN SERPENTINIZED GREENSTONE closely spaced fractures, firm, weak to moderately strong, highly weathered GREEN SERPENTINIZED GREENSTONE closely spaced fractures, moderately hard, weak to moderately strong, moderately weathered	Outside of Landslide
LSTP-18	0.0-1.0 1.0-4.0	BLUE GREEN CLAYEY SAND (SC) medium dense, dry (residual soil) BLUE GREEN SERPENTINITE sheared, very closely spaced fractures, firm to moderately hard, weak, highly to moderately weathered, highly sheared and weathered from 1 to 2 feet	Above Landslide Head Scarp (Outside of Landslide)
LSTP-19	0.0-2.5 2.5-3.0	LIGHT GRAY-BROWN CLAY (CL-CH) hard, dry, weak and porous to 3 feet (Qc) GRAY SILTSTONE	

		extremely closely spaced fractures, moderately hard, weak, highly weathered to brown	No Landslide
	3.0-5.0	GRAY SILTSTONE very closely to closely spaced fractures, moderately hard, moderately strong, moderately weathered	
LSTP-20	0.0-1.5	LIGHT GRAY-BROWN SANDY CLAY (CH) hard, dry, grades to completely weathered siltstone from 1 to 1½ feet, volcanic rubbly float at surface	No Landslide
	1.5-5.0	GRAY-BROWN SHALE closely to very closely spaced fractures, moderately hard, moderately strong, moderately weathered	
LSTP-21	0.0-1.0	VERY LIGHT BROWN SANDY CLAY WITH GRAVEL (CL) medium stiff, dry, with volcanic cobbles and rubbly surface float (Qc)	No Landslide
	1.0-7.0	GRAY SILTSTONE/SHALE extremely closely spaced fractures, moderately hard, moderately strong, moderately weathered	
LSTP-22	0.0-2.0	VERY DARK GRAY BROWN CLAY (CH) hard, dry, with volcanic cobbles and rubbly surface float (Qls)	
	2.0-3.0	VERY DARK GRAY BROWN CLAY WITH COBBLE (CH) medium stiff, dry to moist, with angular gravel and cobbles to 8 inches in diameter, clast-supported (old Qls)	3313
	3.0-4.5	OLIVE BROWN SHALE extremely closely spaced fractures, firm, weak, highly weathered	
LSTP-23	0.0-3.5	LIGHT RED-BROWN SANDY CLAY (CL) medium stiff, dry, with cobbles and boulders, angular gravel, very clayey from 3 to 3½ feet (Qls)	5322
	3.5-4.5	BROWN SANDY CLAYSTONE WITH BOULDERS closely spaced fractures, firm, plastic to friable, highly weathered, with pressure facets	
LSTP-24	0.0-5.0	GRAY BROWN TO DARK GRAY BROWN SANDY CLAY (CH) very stiff to hard, dry to moist, weak and porous to 1½ feet, sparse volcanic gravels (alluvium)	No Landslide
	5.0-6.0	VOLCANIC BOULDERS rubbly flow deposit (Qob – Clearlake Volcanics)	
LSTP-25	0.0-1.0	BROWN SANDY CLAY (CH) medium stiff, dry, with desiccation cracks	No Landslide
	1.0-7.0	DARK GRAY SILTSTONE closely to very closely spaced fractures, firm to moderately hard, weak to moderately strong, moderately weathered	

Faulting

The site is not within a current Alquist-Priolo Earthquake Fault Zone for active faults as defined by California geological Survey (CGS). CGS defines active faults as those exhibiting evidence of surface displacement during Holocene time (last 11,000 years). However, the site is within an area affected by strong seismic activity. Several northwest-trending Earthquake Fault Zones exist in close proximity to, and within several miles of, the site (Bortugno, 1982). The shortest distances from the site to the mapped surface expression of these faults are presented in the table below.

ACTIVE FAULT PROXIMITY		
Fault	**Direction**	**Distance-Miles**
San Andreas	SW	41
Healdsburg-Rodgers Creek	SW	20
Concord-Green Valley	SE	30
Cordelia	SE	30
West Napa	SE	21½
Maacama	SW	16
Konocti	NW	14
Hunting Creek	NE	5¾

Surface

The property extends primarily over relatively level valley floor areas as well as rugged, moderately to steeply sloping terrain. Volcanic-capped peaks are characteristically conical in shape. The vegetation consists of seasonal grasses, chaparral, oak, and other common shrubs of the region. Many acres have been planted in wine grapes.

We understand that several archaeological/cultural historic sites are present on the property. We observed one spring on the southwestern shore of Upper Bohn Lake that reportedly flows all year long (Randy Sternberg, personal communication, 2018).

In general, the ground surface includes both soft, spongy areas, and relatively hard, dry areas. Either condition can generally be associated with weak, porous surface soils. Along existing roads and around existing building areas, some fill soils are present. Undocumented or heterogeneous fill soils, as well as weak, porous surface soils, often have unknown bearing capacity and unpredictable settlement under new loads.

Natural drainage consists of overland flow over the ground surface that concentrates on a natural drainage element such as swales and ravines. Because of the large size of the property, there are several micro-water

sheds that trend toward local low areas, such as Bohn Valley, Bucksnort Creek valley, and the Upper Bohn Lake area.

Subsurface

Our observations of the subsurface materials generally agreed with the published geologic maps with respect to mapped geologic units and bedrock types. The bedrock characteristics vary with the rock type. A summary of the subsurface conditions as observed within our test pits is presented below. Our laboratory testing indicates that two of the five samples of serpentine bedrock tested contained detectable levels of naturally-occurring asbestos mineral fibers (1.58 percent and 2.17 percent; see below and Appendix B for full report).

A composite sample of the near-surface soils from test pits TP-1 through TP-6 exhibits medium plasticity (LL = 48.1; PI = 18.7), very low expansion potential (EI = 8), and moderate to high R-Value (R-Value = 50). A composite sample of the near-surface soils from test pits TP-7 through TP-12 exhibits medium plasticity (LL = 55.8; PI = 28.0), medium expansion potential (EI = 81), and low R-Value (R-Value = 7).

ORIGINAL ENTRY ROAD - TEST PITS TP-1 THROUGH TP-12

Test Pit #	Depth (ft.)	Description	NOA tested/detected
TP-1	0-4	RED-BROWN GRAVEL WITH SILT AND SAND (GP-GM), Loose to medium dense, dry, with roots and rootlets throughout, angular coarse gravel to cobbles (colluvium - Qc)	
	4-5	GREEN SERPENTINITE, crushed, sheared, moderately hard, weak to moderately strong, highly weathered, with hard boulders. No Groundwater encountered	2.17% Chrysotile
TP-2	0-0.5	RED-BROWN CLAYEY SAND (SC), loose, dry, weak and porous, abundant rootlets (surface soil)	
	0.5-1.5	RED-BROWN CLAYEY SAND (SC), with gravel, medium dense, dry to moist, weak and porous, with roots	
	1.5-3	RED-BROWN SILTY GRAVEL WITH SAND (SM), medium dense, moist (Qc)	
	3-4	GRAY SERPENTINIZED GREENSTONE, closely spaced fractures, hard, strong, highly weathered. No Groundwater encountered	
TP-3	0-0.5	RED-BROWN CLAYEY SAND (SC), loose, dry, weak and porous, with gravel, abundant rootlets (Surface soil)	
	0.5-3	GREEN SERPENTINITE, closely to very closely spaced fractures, hard, strong, moderately weathered. No Groundwater encountered	
TP-4	0-0.5	BROWN CLAYEY SAND WITH GRAVEL (SC), loose, moist, weak and porous, with abundant rootlets and organics (surface soil)	

	0.5-2	BLUE-GRAY GREENSTONE, closely spaced fractures, hard, strong, moderately weathered, with serpentinized areas. Very hard digging. No Groundwater encountered	
TP-5	0-0.5	RED-BROWN CLAYEY SAND (SC), loose, dry to moist, weak and porous, with abundant rootlets and organics (surface soil)	
	0.5-1.5	GREEN SERPENTINITE, closely spaced fractures, sheared, moderately hard, weak, highly weathered. No Groundwater encountered	
TP-6	0-2	BROWN CLAYEY SAND WITH GRAVEL (SC), medium dense, dry to moist, with cobbles and boulders, rip rap (fill) Digging refusal in boulders. No Groundwater encountered	
TP-7	0-1.5	RED-BROWN CLAYEY SAND WITH GRAVEL (SC), loose, dry, weak and porous (Qc)	
	1.5-4	ORANGE-BROWN MELANGE, sheared, firm, friable, completely/highly weathered, with hard cobbles of greenstone No Groundwater encountered	ND (non-detect, <0.08%)
TP-8	0-1	RED-BROWN CLAYEY SAND (SC), loose to medium dense, dry, with gravel and cobbles (Qc)	
	1-2	RED CLAY (CH), hard, dry (residual soil)	
	2-6	RED BASALT, closely spaced fractures, firm, weak, highly weathered. No Groundwater encountered	
TP-9	0-0.5	RED CLAY WITH SAND (CL), soft, moist, weak and porous, with abundant rootlets	
	0.5-1	RED CLAY WITH SAND (CL), hard, dry, with gravel (residual soil)	
	1-2.5	RED-BROWN PEBBLY COARSE SANDSTONE, firm, weak, highly weathered No Groundwater encountered	
TP-10	0-2	LIGHT BROWN SILTY-CLAYEY SAND (SC), medium dense, dry to moist, weak and porous	
	2-3	LIGHT BROWN CLAYEY SAND (SC), medium dense to dense, dry to moist, with gravel (residual soil)	
	3-5	ORANGE BROWN GREENSTONE, very to extremely closely spaced fractures, firm, weak, highly weathered No Groundwater encountered	
TP-11	0-1.5	RED-BROWN CLAY WITH SAND (CL), soft to medium stiff, moist, weak and porous, with roots to 2’	
	1.5-3	RED-BROWN SANDY CLAY (CH), hard, dry	

	3-4 4-5	GREEN TO RED-BROWN MELANGE, sheared, firm, weak, highly weathered, with resistant greenstone fragments. DARK GRAY-GREEN GREENSTONE, sheared, moderately hard, moderately strong, moderately weathered to red in color. No Groundwater encountered	
TP-12	0-2 2-5 5-5.5	DARK BROWN SANDY CLAY (CH), hard, dry, weak and porous to 0.5', with roots, GREEN TO BROWN MELANGE, sheared, firm, weak, highly weathered GRAYWACKE SANDSTONE, closely spaced fractures, hard, moderately strong to strong, moderately weathered. No Groundwater encountered	

Our laboratory tests indicate that throughout the Farmstead area, most of the near-surface soils exhibit high plasticity (LL from 60.3 to 91.6; PI from 39.5 to 63.1), and medium to high expansion potential (EI from 88 to 123).

FARMSTEAD/MAHA Farm- TEST PITS TP-13 THROUGH TP-30

Test Pit #	Depth (ft.)	Description	NOA tested/detected
TP-13	0-0.5 0.5-3	BROWN CLAYEY SAND (SC), loose, moist, weak and porous, with gravel and cobbles, with abundant roots, organics YELLOW TO OLIVE GREEN TUFF, firm to moderately hard, weak, highly weathered, hydrothermally altered. No Groundwater encountered	
TP-14	0-1 1-1.5 1.5-2 	RED-BROWN CLAY WITH SAND (CL), soft, moist, weak and porous, with gravel, with roots (surface soil) RED-BROWN CLAY WITH SAND (CH), hard, moist, with cobbles, vertical pressure facets RED-BROWN SILTY GRAVEL WITH SAND (SM), medium dense, moist (Qc) GREEN SERPENTINITE, sheared, moderately hard, moderately strong, highly weathered. No Groundwater encountered	1.58 % Chrysotile
TP-15	0-2 2-2.5 2.5-6	RED-BROWN CLAY WITH SAND AND GRAVEL (CL), medium stiff, dry, with rootlets to 0.5, weak and porous to 1' (surface soil) RED-BROWN CLAYEY GRAVEL (GC), dense, dry to moist, angular volcanic gravels (Qt) RED-BROWN CLAY WITH SAND (CH), hard, dry to moist, vertical pressure facets	

	6-7	RED-ORANGE CLAY WITH SAND (CL), hard, dry, with basalt gravel and cobbles, becomes indurated (MUDSTONE) at 7'. No Groundwater encountered	
TP-16	0-0.75 0.75-2	BROWN SANDY CLAY (CH), medium stiff to very stiff, moist, weak and porous to 0.5', with roots throughout BROWN, GREEN, ORANGE SERPENTINITE, extremely closely spaced fractures, moderately hard, strong, highly weathered; hard digging No Groundwater encountered	ND (<0.08%)
TP-17	0-2 2-2.5 2.5-5 5-5.5	RED-BROWN CLAY WITH SAND AND GRAVEL (CL), medium stiff, dry, with rootlets to 0.5', weak and porous to 1' (Surface soil) RED-BROWN CLAYEY GRAVEL (GC), dense, dry to moist, angular volcanic gravels (terrace deposits - Qt) RED-BROWN CLAY WITH SAND (CH), hard, dry to moist, vertical pressure facets, with sand, with serpentinite and obsidian gravels (Qt and residual soil) GREEN AND BLACK SERPENTINITE, sheared, firm, weak, highly weathered No Groundwater encountered	ND (<0.08%)
TP-18	0-1.5 1.5-3 3-4	LIGHT BROWN CLAYEY SAND (SC), medium dense, dry to moist, weak and porous throughout, with gravel, with large roots to 3', increased gravels at base of layer RED TO OLIVE BROWN CLAY (CH), hard to very hard, moist, vertical pressure facets LIGHT BROWN SANDSTONE, closely to very closely spaced fractures, moderately hard, weak to moderately strong, moderately to highly weathered. No Groundwater encountered	
TP-19	0-1.5 1.5-3.5 3.5-5.5	RED-BROWN CLAY WITH SAND (CH), medium stiff, dry to moist, weak and porous, with abundant roots, with volcanic gravels RED-BROWN CLAY (CH), hard to very hard, moist, with some gravels VOLCANIC BRECCIA, closely spaced fractures, firm, friable, highly weathered No Groundwater encountered	
TP-20	0-2 2-4	RED-BROWN CLAY WITH SAND (CL), medium stiff to very stiff, moist, weak and porous, abundant roots and rootlets RED-BROWN CLAY (CH), hard to very hard, moist, with large gravels/small cobbles of basalt-andesite	

	4-4.5	ORANGE-BROWN SANDY VOLCANIC AGGLOMERATE, closely spaced fractures, firm, weak, highly weathered. No Groundwater encountered	
TP-21	0-1.5 1.5-3	RED-BROWN CLAY WITH SAND (CL), soft to medium stiff, dry, weak and porous, with abundant roots, with weathered silicic gravels LIGHT YELLOW TO RED VOLCANIC AGGLOMERATE, closely spaced fractures, firm to moderately hard, weak, highly weathered, with spheroidally weathered dacite cobbles in a red clay matrix. No Groundwater encountered	
TP-22	0-1.5 1.5-2 2-3 3-3.5	RED-BROWN SANDY CLAY WITH GRAVEL (CL), medium stiff, dry, weak and porous RED-BROWN CLAY WITH SAND (CH), hard, dry, with light gray silicic volcanic gravels RED-BROWN CLAY (CH), hard to very hard, moist ORANGE SANDY LITHIC TUFF, partly welded, closely spaced fractures, firm to moderately hard, weak, highly weathered No Groundwater encountered	
TP-23	0-2 2-5.5	RED CLAYEY SAND (SC), dense, moist, weak and porous to 1', with roots to 2', with abundant small gravels (residual soil) RED AGGLOMERATE, firm, weak, highly weathered No Groundwater encountered	
TP-24	0-2 2-3 3-4	RED-BROWN SANDY CLAY (CL), medium stiff, moist, with abundant volcanic gravel, with abundant roots to 2.5', weak and porous to 0.5' MOTTLED RED-BROWN AND GRAY CLAY (CH), hard to very hard, moist, vertical pressure facets (residual soil) RED TO LIGHT GRAY TUFF AND TUFF AGGLOMERATE, closely spaced fractures, firm, weak, highly weathered No Groundwater encountered	
TP-25	0-2.5 2.5-3 3-3.5	BROWN SANDY CLAY (CL), soft to medium stiff, moist, weak and porous, with abundant roots and volcanic cobbles. GRAY-OLIVE BROWN CLAY WITH SAND (CH), hard, moist RED WELDED TUFF, closely spaced fractures, moderately hard, moderately strong, highly weathered. No Groundwater encountered	
TP-26	0-2 2-3.5	RED-BROWN SANDY CLAY (CL), soft to medium stiff, moist, with abundant dacite cobbles and boulders GRAY AND RED DACITE AGGLOMERATE, spheroidally weathered clasts in a weathered RED CLAY (CH) matrix, clasts are very hard, very strong; clast-supported	

		No Groundwater encountered	
TP-27	0-0.5 0.5-2	RED-BROWN SANDY CLAY (CL), soft, moist, weak and porous, with abundant rootlets and volcanic cobbles DARK GRAY BASALT AGGLOMERATE, moderately to widely spaced fractures, very hard, very strong, moderately weathered to red on fracture surfaces, clast-supported, boulders in a soft, dry clay matrix, very hard digging No Groundwater encountered	
TP-28	0-0.5 0.5-2	RED-BROWN SANDY CLAY (CL), soft, moist, weak and porous, with abundant rootlets and volcanic cobbles DARK GRAY BASALT AGGLOMERATE, moderately to widely spaced fractures, very hard, very strong, moderately weathered to red on fracture surfaces, clast-supported, boulders in a soft, dry clay matrix, very hard digging No Groundwater encountered	
TP-29	0-1 1-1.5 1.5-2.5 2.5-3	RED SANDY CLAY (CL), soft to medium stiff, dry to moist, with gravel RED SILTY GRAVEL (GM), dense, moist, with sand, spheroidally weathered dacite cobbles in a soil matrix RED-BROWN CLAY (CH), hard, moist, with gravel, vertical pressure facets ORANGE-BROWN VOLCANIC AGGLOMERATE, very hard, moderately strong, moderately weathered. No Groundwater encountered	
TP-30	0-3	RED-BROWN SANDY CLAY (CL), soft, weak and porous to 2', hard, clast-supported 2' to 3', dry to moist, with cobbles and boulders of very hard, very strong basalt; digging refusal in boulders at 3' No Groundwater encountered	

OTHER AREAS - TEST PITS TP-31 THROUGH TP-45

Test Pit #	Depth (ft.)	Description	NOA tested/detected
TP-31	0 – 3 3 - 5	BROWN SILTY SAND (SM), loose to medium dense, dry to moist, with cobbles to boulders of serpentinized greenstone, weak & porous to 1.5', roots to 3' Green serpentinite, extremely closely spaced fractures, moderately hard, moderately strong to strong, moderately to highly weathered. No Groundwater encountered	
TP-32	0 - 1	REDDISH BROWN SANDY CLAY (CL), soft to medium stiff, dry, with cobbles. – Hang-dug pit, no excavator access. Float on surface of gray basalt, closely spaced fractures, hard to very hard, very strong, highly to moderately weathered.	

		No Groundwater encountered	
TP-33	0 – 2	LIGHT BROWN CLAY (CL), soft to medium stiff, dry, with cobbles of very light gray dacite; weak and porous to 1’	
	2 – 3.5	LIGHT GRAY & RED AGGLOMERATE. Light gray DACITE cobbles in a very stiff to hard, red CLAY (CH) matrix. Matrix-supported and highly weathered 1 to 2’; clast-supported below 2’; closely spaced fractures. No Groundwater encountered	
TP-34	0 – 1	BROWN SANDY CLAY (CH), very stiff to hard, dry, with gravel (volcanic, angular clasts); weak and porous; desiccation cracks at surface extend 1.5’ below surface.	
	1 – 3	BLACK CLAY (CH), hard, dry to moist, with black and green greenstone fragments; with vertical pressure facets	
	3 – 5.5	BLACK TO GREEN SERPENTINITE & SERPENTINIZED GREENSTONE, extremely closely spaced fracatures, hard to very hard, strong to very strong, moderate weathering. No Groundwater encountered	
TP-35	0 – 5.5	RED-BROWN SANDY CLAY (CL-CH), stiff, dry, weak to 1’, somewhat porous to 2’, roots to 3’, with coarse sand and gravel. Becomes, hard, less porous at 2’, with increased dacite gravel and cobbles.	
	5.5 - 7	LIGHT GRAY & RED AGGLOMERATE. Light gray DACITE cobbles in a very stiff to hard, red CLAY (CH) matrix. Clast-supported; closely spaced fractures. No Groundwater encountered	
TP-36	0 – 1	BROWN CLAY (CH), very stiff, dry, with sand and gravel, weak and porous to 0.5’, sparse roots	
	1 - 5	BLACK AND GREEN SERPENTINIZED GREENSTONE, extremely closely spaced fractures, sheared texture, friable to moderately hard, moderately strong, highly weathered; completely weathered with soil matrix from 1 to 1.5’. No Groundwater encountered	
TP-37	0 – 1.5	BROWN CLAY (CL), very stiff, dry, weak to 0.5’	
	1.5 – 4.5	VERY DARK BROWN SANDY CLAY (CH), hard, moist, with red volcanic cobbles, with serpentinite gravels, some roots to 3.5’.	
	4.5 – 7	RED-BROWN SANDY CLAY (CH), hard, dry to moist, with serpentinite gravels	
	7	RED-BROWN GREENSTONE/BASALT, closely spaced fractures, hard, moderately strong, highly weathered. No Groundwater encountered	ND (< 0.08%)
TP-38	0 – 1	LIGHT BROWN CLAY (CL), medium stiff, dry, with cobbles, weak and porous, with roots	

	1 – 1.5 1.5 - 4	RED CLAY (CH), hard, moist, with sand and gravel RED VOLCANIC AGGLOMERATE – subangular gravel- to cobble-sized andesite-dacite clasts in a hard, red SANDY CLAY (CH) matrix, matrix-supported; massive, no visible fracturing, moderately hard, moderately strong, moderate weathering, hard digging. No Groundwater encountered	ND (< 0.08%)
TP-39	0 – 1.5 1.5 - 4	DARK BROWN SANDY CLAY (CH), medium stiff to hard, dry to moist, weak and porous to 0.5', with abundant roots throughout, with serpentinite clasts/weathered bedrock surface 1-1.5'. DARK GRAY GREEN SERPENTINIZED GREENSTONE & SERPENTININTE, sheared, closely to extremely closely spaced fractures, moderately hard, weak to moderately strong, highly weathered. No Groundwater encountered	Chrysotile (< 0.08%)
TP-40	0 – 1.5 1.5 - 3	RED-BROWN CLAY (CH), medium stiff to very stiff, moist, with gravels and cobbles of serpentinite GREEN SERPENTINITE, sheared, extremely closely spaced fractures, moderately hard, weak to moderately strong, highly weathered from 1.5' to 2.5', moderately weathered 2.5' to 3', hard digging. No Groundwater encountered	3.92% Chrysotile
TP-41	0 – 1 (locally) 0 – 1.5	RED-BROWN SANDY CLAY (CL), soft, dry, weak and porous, with roots GREEN SERPENTINITE, sheared, closely-spaced fractures, moderately hard, moderately strong, highly weathered 0 to 1', moderately to slightly weathered 1 to 1.5;, digging refusal at 1.5'.	1% Chrysotile
TP-42	0 – 2 2 – 3.5	LIGHT REDDISH-BROWN CLAY WITH SAND (CL), medium stiff, dry, with roots, weak and porous; increased large gravels and small cobbles 1' to 2'. VOLCANIC AGGLOMERATE, closely to very closely spaced fractures, hard to very hard, strong to very strong, large cobble-sized clasts of subangular, spheroidally-weathered basalt; clast-supported. Digging refusal at 3'. No Groundwater encountered	
TP-43	0 – 1.5 1.5 - 2	RED-BROWN SILT (ML), medium stiff, dry, weak and porous throughout GRAY TO PINK TUFF AGGLOMERATE, closely spaced fractures, hard, strong, moderate weathering. No Groundwater encountered	ND (< 0.08%)
TP-44	0 – 1 (locally) 0 – 1.5	LIGHT RED-BROWN SILT (ML), medium stiff, dry, weak and porous GRAY ANDESITE, closely spaced fractures, hard, strong, slightly to	ND (< 0.08%)

		moderately weathered to red-brown on fractures. Digging refusal at 1.5'. No Groundwater encountered	
TP-45	0 – 1 1 - 2	LIGHT RED-BROWN SILT (ML), medium stiff, dry, weak and porous GRAY ANDESITE, closely spaced fractures, hard, strong, highly weathered from 1 to 1.5', slightly to moderately weathered to red-brown on fractures below 1.5'. Digging refusal at 2'. No Groundwater encountered	ND (< 0.08%)

DISCUSSION AND CONCLUSIONS

Geologic Hazards

Serpentinite Bedrock and NOA

The site has areas mapped as having ultramafic bedrock units. Some ultramafic bedrock types contain naturally occurring asbestos. Test pits TP-1, -2, -3, -4, -5, -14, -16, -17, -31, -34, -36, -40, and -41 encountered serpentinite and/or serpentinized greenstone bedrock at depths of 0 to 5 feet. This bedrock could be exposed during grading and can contain naturally occurring asbestos fibers. There are State enforced regulations giving specific measures that must be used during grading to mitigate hazards associated with airborne asbestos particles. If these materials are exposed during grading, we will notify the client and the general contractor of the potential hazard. We recommend you retain certified asbestos personnel to develop a work plan to address airborne asbestos during grading.

Landslides

As discussed previously, landslide/debris/earth flow features have been mapped by others (Dwyer, 1976) at the project site and primarily occur with Franciscan Complex bedrock. Development including roadway and utilities should avoid these areas unless remedial work is performed to stabilize the slopes. Remedial work could include removing the landslide debris and constructing a buttress. In addition, debris/earth flow features can have adverse impact on improvements constructed downslope if the feature were to reactivate. The design level geotechnical studies at each structure location should address these issues in detail.

In general, most of the deposits we interpret to have been emplaced through landslide processes are less than 5 feet thick and consist of angular cobbles within a sandy clay matrix. Often, an old clay slide plane and/or layer of larger cobbles or boulders was observed along the base of the deposit. All of the landslides we observed in test pits are at least dormant, with some being ancient and well-indurated or "healed". The oldest of the landslides exhibits a high degree of cementation and induration, being described as hardpan soil or breccia. In test pits LSTP-3 and LSTP-4, we encountered digging refusal within the well-indurated, ancient landslide deposits. In some areas, the material described as landslide debris may be more colluvial in nature (colluvium is unconsolidated soil and rock material that moves downslope primarily due to gravity rather than saturation, material characteristics, or inherent planes of weakness). However, due to the unconsolidated and geologically young nature of these deposits, loose colluvium may pose similar risks to construction as landslide debris, when disturbed.

The most notable areas in which we anticipate the presence of landslide deposits will be a prominent geotechnical consideration during construction are the landslides mapped at LSTP-15 and -16, -11, -13, -6, and along the main entry road. Separate reports addressing the main entry road, other roads, and the Polo Lodge, respectively, will address these landslides on a case by case basis.

Fault Rupture

We did not observe landforms within the area that would indicate the presence of active faults and the site is not within a current Alquist-Priolo Earthquake Fault Zone. Therefore, we believe the risk of fault rupture at the site is low.

Strong Ground Shaking

Data presented by the Working Group on California Earthquake Probabilities (2002) estimates the chance of one or more large earthquakes (Magnitude 6.7 or greater) in the San Francisco Bay region within the next 30 years to be approximately 62 percent. Therefore, future seismic shaking should be anticipated at the site. It will be necessary to design and construct the proposed structures in strict adherence with current standards for earthquake-resistant construction.

Liquefaction

Liquefaction is a rapid loss of shear strength experienced in saturated, predominantly granular soils below the groundwater level during strong earthquake ground shaking due to an increase in pore water pressure. The occurrence of this phenomenon is dependent on many complex factors including the intensity and duration of ground shaking, particle size distribution and density of the soil. The site contains several isolated areas delineated by Slosson and Associates (1976) as liquefaction study zones, including Bohn Valley, the flat, low-lying area south of McCreary Lake, the small basin surrounding Wildcat Lake, and the low-lying areas surrounding Ink Ranch in the far northeastern corner of the property. Therefore, we judge that there is a moderate potential for liquefaction at the site within these areas. The final geotechnical study should address liquefaction in detail, especially if development is planned in these areas.

Densification

Densification is the settlement of loose, granular soils above the groundwater level due to earthquake shaking. Densification typically occurs in old fills and in soils that if saturated would be susceptible to liquefaction. The final geotechnical study should address densification in detail, especially in areas of planned development.

Lurching

Seismic slope failure or lurching is a phenomenon that occurs during earthquakes when slopes or man-made embankments yield and displace in the unsupported direction. Provided the improvements are located outside areas of identified slope instability and the foundations are installed as recommended herein, and the proposed fills are adequately keyed into underlying bedrock material, as subsequently discussed, we judge the potential for impact to the proposed fills from the occurrence of these phenomena

at the site is low. However, some of these secondary earthquake effects are unpredictable as to location and extent, as evidenced by the 1989 Loma Prieta Earthquake.

Volcanism

The Clear Lake volcanic field has experienced a complex and cyclic eruptive history. The youngest eruptive sequence is dated at 10,000 years old (Miller, 1989; Sims and Rymer, 1975), and fumaroles (gas vents) are active throughout the Clear Lake Basin. These conditions suggest that the Clear Lake Volcanic System is not extinct and future eruptions could occur. Volcanic hazards that may be pertinent to the site area include phreatic and tephra eruptions and surges (Miller, 1989). Volcanic impact could range from inundation by several inches of ash to major ash flow eruptions. Due to the complex nature of the past episodic volcanic activity, no prediction regarding the extent or time of future volcanic activity is available. The risk of impact from volcanism at the site can be further influenced by wind and other climatologic conditions, is consistent with that of other properties in the Clear Lake area, and is not considered to be sufficiently defined to preclude site development.

Flooding and Seiche

Our review of the Federal Emergency Management Agency (FEMA) Flood Zone Maps for Lake County, California, Unincorporated Areas (No. 06033C1000D dated September 26, 2008 and 06033C0900D dated September 30, 2005), indicate that the entire property lies within Zone D, defined as an area of undetermined flood hazards. Evaluation of flooding potential is typically the responsibility of the project civil engineer.

The site includes several lakes ranging greatly in size, and as previously discussed, is susceptible to impact from seismic shaking. Strong, sudden earthquake waves can produce surges in bodies of water (seiches) that can cause damage and flooding similar to the effect of tsunami along the coastline. Site-specific evaluation of seiche impact to the project is beyond the scope of this study.

Expansive Soil

We encountered expansive soils in some of our test pits. Expansive soil is considered a geologic hazard because of the costly damage it causes to structures when its effects are not considered during construction. Expansive surface soils shrink and swell as they lose and gain moisture throughout the yearly weather cycle. Near the surface, the resulting movements can heave and crack lightly loaded shallow foundations, slabs and pavements. The zone of significant moisture variation (active layer) is dependent on the expansion potential of the soil and the extent of the dry season. In the Lake and Napa County area, the active layer is generally considered to range in thickness from about 2 to 3 feet. The detrimental effects of the above-described movements can be reduced by treating or capping the expansive soils during grading, and/or by utilizing foundation systems that either gain support below the active layer, or are designed to move with the soils and bridge the heave effects.

Conclusions and Recommendations

Based upon the results of our geologic data review and reconnaissance, we judge that it is geotechnically feasible to construct the resort. The primary geotechnical considerations and potential mitigating measures recommended for parcel creation, building site development and roadway construction are discussed in the

following sections of the report. These conclusions are preliminary and will need to be verified or modified during final design following detailed site-specific subsurface exploration, laboratory testing and geotechnical engineering evaluations, as recommended herein.

Permanent Cut and Fill Slopes

In general, cut and fill slopes should be designed and constructed at slope gradients of 2:1 (horizontal to vertical) or flatter, unless otherwise approved by the geotechnical engineer in specified areas. In expansive soil areas and serpentinite or highly weathered mélange bedrock, cut and fill slopes should be no steeper than 3:1. Where steeper slopes are required, retaining walls should be used. Fill slopes steeper than 2:1 will require the use of geogrid to increase stability.

If the owner is willing to accept on-going maintenance, steeper slopes may be constructed within roadway cutslopes on a case-by-case basis. Cutslopes up to 1:1 may be allowable in certain areas with certain remedial measures.

In general, slopes within serpentinite-derived soils and Franciscan mélange or serpentinite bedrock are highly weathered and are less stable than slopes on younger and/or harder bedrock types. In addition, some of the younger volcanic bedrock formations are rubbly to agglomeritic in nature and may be prone to rockfalls or debris flows as the clayey matrix becomes saturated on steep slopes. The geotechnical engineer should review preliminary site-specific grading plans and profiles for potential slope stability concerns.

Landslide Areas

In general, weak landslide/colluvium deposits on the order of 5 to 10 feet thick can be removed during grading and replaced as drained, buttressed fills. Support for new fills or retaining walls can be found below relatively shallow unconsolidated deposits. Cuts within surficial landslide deposits or loose colluvium can be retained, laid back, and/or the unconsolidated deposits removed on slopes steeper than about 5:1, to prevent reactivation of movement. Denuded slopes should be planted with fast-growing plants to stabilize the bare soils. In the ancient landslide explored with test pits LSTP-3, -4, and -5, the landslide debris is so ancient and consolidated that it constitutes supporting material. In this area, and on stable slopes in general, the younger, weak surface soil and colluvium will still need to be reworked if it is to be used for support.

Residence Locations

The proposed building envelopes must be located outside unstable areas and steep slopes in order to reduce the risks associated with slope instability. Initially, a structural setback of approximately 50-feet from unstable areas and breaks in slope of 2:1 or steeper should be established. A site-specific study should finalize recommended structural setbacks.

Supplemental Services

We should perform detailed, site-specific geotechnical studies prior to the construction of the different phases of the resort, including access roads, the farmstead, hotels, spa, equestrian center, shops, residences, and other planned features. The studies should include test borings or backhoe pits, laboratory testing and engineering analyses. The geotechnical study should address specific design and locating aspects of each planned structure location and the access road, and the data generated should be incorporated into project plans. The plans should then be reviewed by the geotechnical engineer and /or engineering geologist prior to receiving bids for planned work.

LIMITATIONS

This report has been prepared by RGH for the exclusive use of Lotusland Investment Holdings, Inc. and their consultants to evaluate the geotechnical feasibility of the proposed resort.

Our services consist of professional opinions and conclusions developed in accordance with generally accepted geotechnical engineering principles and practices. We provide no warranty, either expressed or implied. Our conclusions and recommendations are based on the information provided to us regarding the project, the results of our field reconnaissance, data review, and professional judgment. As such, our conclusions and recommendations should be considered preliminary and for feasibility and planning purposes only. Additional subsurface study, such as recommended herein, may reveal conditions different from those inferred by surface observation and data review only. Such subsurface study may warrant a revision to our preliminary conclusions.

Site conditions and cultural features described in the text of this report are those existing at the time of our field exploration in 2018 and 2019, and may not necessarily be the same or comparable at other times.

It should be understood that slope failures including landslides, debris flows and erosion are on-going natural processes which gradually wear away the landscape. Residual soils and weathered bedrock can be susceptible to downslope movement, even on apparently stable sites. Such inherent hillside and slope risks are generally more prevalent during periods of intense and prolonged rainfall, which occasionally occur in northern California and/or during earthquakes. Therefore, it must be accepted that occasional slope failure and erosion and deposition of the residual soils and weathered bedrock materials are irreducible risks and hazards of building upon or near the base of any hillside or steep slope throughout northern California. By accepting this report, the client and other recipients acknowledge their understanding and acceptance of these risks and hazards.

Except for the testing for the presence of NOA as discussed herein, the scope of our services did not include an environmental assessment or a study of the presence (or absence) of hazardous, toxic or corrosive materials in the soil, surface water, groundwater or air on, below, or around this site, nor did it include an evaluation or study for the presence (or absence) of wetlands.

PLATE
4e

Landslide Identification Nomenclature *

Type of Landslide Movement

1	Rotational (Earth Slump)	Movement due to forces that cause a turning moment about a point above the center of gravity of the unit.
2	Translational	Movement predominantly along more or less planar or gently undulatory surfaces.
3	Debris Flow	Rapid movement (50 to 80 kph) within displaced mass such that the form taken by moving material or the apparent distribution of velocities and displacements resemble those of viscous fluids.
4	Earth Flow	Downslope viscous flow of fine grained materials that have been saturated and moves under the pull of gravity. Typically slow moving (a few meters per day or less).
5	Debris Slide	Unconsolidated rock and soil moved downslope along a relatively shallow failure plane
6	Rock Fall	Fragments of rock detached by toppling or falling that falls along a vertical or sub-vertical cliff.
C	Many landslides consist of one or more type of movement. The listed type of movement is modified with a "C" to indicate a Complex of landslides.	

Certainty of Landslide Identification

1	Definite
2	Probable
3	Questionable

Estimated Thickness of Landslide Deposits

1	Less than 5 feet
2	5 to 20 feet
3	20 to 50 feet
4	Greater than 50 feet

State of Landslide Activity

1	Recently Active	Currently moving or estimated movement within recent years.
2	Dormant	Marginally stable with mature and subdued expression of the landslide. Mostly re-vegetated.
3	Ancient	Most landslide features are eroded. Heavily vegetated.

* The landslide identification mapping is designed for planning purposes only and should not be used in lieu of a detailed site specific investigation. Our mapping should be considered preliminary and for feasibility and planning purposes only. A subsurface study may reveal conditions different from those inferred by surface observations and data review only. Such subsurface study may warrant a revision to our preliminary mapping.

SOIL CLASSIFICATION AND KEY TO TEST DATA
MAHA Resort at Guenoc Valley
22000 Butts Canyon Road
Middletown, California

PLATE
6

LAYERING

MASSIVE	Greater than 6 feet
THICKLY BEDDED	2 to 6 feet
MEDIUM BEDDED	8 to 24 inches
THINLY BEDDED	2½ to 8 inches
VERY THINLY BEDDED	¾ to 2½ inches
CLOSELY LAMINATED	¼ to ¾ inches
VERY CLOSELY LAMINATED	Less than ¼ inch

JOINT, FRACTURE, OR SHEAR SPACING

VERY WIDELY SPACED	Greater than 6 feet
WIDELY SPACED	2 to 6 feet
MODERATELY SPACED	8 to 24 inches
CLOSELY SPACED	2½ to 8 inches
VERY CLOSELY SPACED	¾ to 2½ inches
EXTREMELY CLOSELY SPACED	Less than ¼ inch

HARDNESS

Soft - pliable; can be dug by hand

Firm - can be gouged deeply or carved with a pocket knife

Moderately Hard - can be readily scratched by a knife blade; scratch leaves heavy trace of dust and is readily visible after the powder has been blown away

Hard - can be scratched with difficulty; scratch produces little powder and is often faintly visible

Very Hard - cannot be scratched with pocket knife, leaves a metallic streak

STRENGTH

Plastic - capable of being molded by hand

Friable - crumbles by rubbing with fingers

Weak - an unfractured specimen of such material will crumble under light hammer blows

Moderately Strong - specimen will withstand a few heavy hammer blows before breaking

Strong - specimen will withstand a few heavy ringing hammer blows and usually yields large fragments

Very Strong - rock will resist heavy ringing hammer blows and will yield with difficulty only dust and small flying fragments

DEGREE OF WEATHERING

Highly Weathered - abundant fractures coated with oxides, carbonates, sulphates, mud, etc., thorough discoloration, rock disintegration, mineral decomposition

Moderately Weathered - some fracture coating, moderate or localized discoloration, little to no effect on cementation, slight mineral decomposition

Slightly Weathered - a few stained fractures, slight discoloration, little or no effect on cementation, no mineral composition

Fresh - unaffected by weathering agents; no appreciable change with depth

RE: LABORATORY JOB #'s: 1392-00005
Polarized light microscopy analytical results for 5 bulk sample(s).
Job Site: 7192.04.01.3
Job No.: Maha Resort Middletown

Enclosed please find the bulk material analytical results for one or more samples submitted for asbestos analysis. The analyses were performed in accordance with a modified California Air Resources Board (ARB) Method 435 for the determination of asbestos in serpentine aggregate samples.

Prior to analysis, samples are logged-in and all data pertinent to the sample recorded. The samples are checked for damage or disruption of any chain-of-custody seals. A unique laboratory ID number is assigned to each sample. A hard copy log-in sheet containing all pertinent information concerning the sample is generated. This and all other relevant paper work are kept with the sample throughout the analytical procedures to assure proper analysis.

Sample preparation follows a standard CARB 435 prep method. The entire sample is dried at 135-150 C and then crushed to ~3/8" gravel size using a Bico Chipmunk crusher. The sample is then pulverized in a Bico Braun disc pulverizer calibrated to produce a nominal 200 mesh final product. Small aliquots are collected from throughout the pulverized material to create three separate microsope slide mounts containing the appropriate refractive index oil. The prepared slides are placed under a polarizing light microscope where standard mineralogical techniques are used to analyze the various materials present, including asbestos. If asbestos is identified and of less than 10% concentration by visual area estimate then an additional five sample mounts are prepared. Quantification of asbestos concentration is obtained using the modified CAL ARB Method 435 point count protocol. For samples observed to contain visible asbestos of less than 10% concentration, a point counting techinique was performed on multiple sample mounts for a total of 800 or 1200 particle points (a variation from the 400 points called for by the standard CARB 435 method) which is detailed on the test report. The data is then compiled into standard report format and subjected to a thorough quality assurance check before the information is released to the client.

While the CARB 435 method has much to commend it, there are a number of situations where it fails to provide sufficient accuracy to make a definitive determination of the presence/absence of asbestos and/or an accurate count of the asbestos concentration present in a given sample. These problems include, but are not limited to, 1) statistical uncertainty with samples containing <1% asbestos when too few particles are counted, 2) definitive identification and discrimination between various fibrous amphibole minerals such as tremolite/actnolite/ hornblende and the "Libby amphiboles" such as tremolite/winchite/richterite/arfvedsonite, and C) small asbestiform fibers which are near or below the resolution limit of the PLM microscope such as those found in various California coast range serpentine bodies. In these cases, further analysis by transmission electron microscopy (TEM) is recommended to obtain a more accurate result.

Sincerely Yours,

ASBESTOS TEM LABORATORIES, INC.

APPENDIX GPCT

GENERAL PLAN CONSISTENCY TABLE

Appendix GPCT

Policy Analyses

Guenoc Valley Mixed Use Planned Development Project
Consistency with Lake County
General Plan Policies

An EIR must discuss "any inconsistencies between the proposed project and the applicable general plans." CEQA Guidelines,§15125(d). For the Proposed Project, the applicable plan is the Lake County General Plan. The focus of this appendix is the identification of policies in the General Plan that apply to the proposed land uses of this particular project. This appendix does not discuss policies that apply to the County itself or policies that apply only to some other type of land use not included in the proposed project. Policies that are not applicable to the proposed project for either reason have not been included in the following discussion.

While this EIR analyzes the Proposed Project's consistency with applicable policies, it is the County Board of Supervisors who will make the ultimate determination in regard to the Proposed Project's consistency with the General Plan.

TABLE 1
LCGP CONSISTENCY ANALYSIS – LAND USE AND AGRICULTURE

General Plan Policy	Consistency Determination	Analysis
Land Use (LU) Element		
Growth and Development		
Policy LU-1.1: The County shall promote the principles of smart growth, including: • creating walkable neighborhoods; • creating a strong sense of community identity; • mixing land uses; • directing growth toward existing communities; • taking advantage of compact building design; • discouraging sprawl; • encouraging infill; • preserving unique historical, cultural and natural resources; • preserving open space; and, • creating a range of housing opportunities and choices.	Consistent	The Proposed Project is designed with low impact development and smart growth policies. The resort features clustered development, preservation of agricultural and cultural heritage, landscape preservation, diversification of the Lake County housing stock, and conservation of open space. The resort itself would be bikeable, feature active and passive use trails, and create a community center open to the public.
Policy LU-1.2: The County shall promote flexibility and innovation through the use of planned unit developments, development agreements, specific plans, mixed use projects, and other innovative development and planning techniques.	Consistent	The Proposed Project is a planned mixed-use resort development that satisfies the County's desire to support innovative ideas and land use techniques.
Policy LU-1.3: The County shall prevent intrusion of new compatible land uses into existing community areas.	Consistent	The Proposed Project would not be introducing new compatible land uses into an existing community setting because the off-site workforce housing would be residential and therefore match the current land use in Middletown. The Guenoc Valley Site is not within an existing community area.
Policy LU-1.5: The County shall actively support the development of mixed use projects as a means to reduce travel distances and create neighborhood environments that offer a range of residential options.	Consistent	The Proposed Project would offer mixed-use development including retail, residential, and agricultural.
Urban/Rural Boundary		
Policy LU-2.1: The County shall encourage residential growth to locate in existing urban areas where infrastructure is available and capacity is sufficient. The County shall ensure that development does not occur unless adequate infrastructure capacity is available for that area.	Consistent	The Proposed Project would be entirely self-sufficient and would therefore provide adequate infrastructure for its capacity requirements.
Policy LU-2.3: The County shall maintain distinct urban edges for all unincorporated communities, while creating a gradual transition between urban uses and open space.	Consistent	The proposed residential communities would be developed in clusters and preserve approximately 2,765 acres of designated open space.

General Plan Policy	Consistency Determination	Analysis
Policy LU-2.4: The County shall require adequate setbacks between agricultural and non-agricultural uses. Setbacks shall vary depending on type of operation and chemicals used for spraying. Buffers shall consider several factors including building orientation, planting of trees for screening, and unique site conditions (e.g. topography). Buffers shall be provided by the new proposed development.	Consistent	The Proposed Project utilizes native landscape plantings as buffers, stormwater mitigation, and fire preparedness. Natural buffers would be implemented between agricultural and non-agricultural uses.
Policy LU-2.6: The County shall limit urban development to the areas within designated Community Growth Boundaries (as defined on Figures 3 - 2 through 3 - 13). These Community Growth Boundaries are located in the following communities: Clearlake Oaks, Clearlake Riviera, Coyote Valley, Kelseyville, Lower Lake, Lucerne, Middletown, Nice, North Lakeport, Soda Bay, South Lakeport, and Upper Lake.	Consistent	The Middletown Housing Site is within the Community Growth Boundary. Although the Guenoc Valley Site is not within a Community Growth Boundary, the development on this site would be Resort Commercial with low housing density.
Residential Development		
Policy LU-3.1: The County shall encourage major new residential development to locate in close proximity to existing infrastructure and opportunities for employment, services, and recreation.	Consistent	See **Policy LU-2.1** for infrastructure. The Proposed Project would be located in close proximity to existing recreational opportunities and services in addition to creating its own. The Proposed Project would create job opportunities for Lake County.
Policy LU-3.2: The County shall consider rural development intensity in rural areas located outside of Community Growth Boundaries according to its ability to support water and waste disposal needs, access, slope characteristics, protection of sensitive natural resources and the site's susceptibility to natural hazards.	Consistent	This EIR includes an analysis of the suitability of the development areas, including water/waste, accessibility, biological resources, and hazards.
Policy LU-3.3: The County shall encourage proposed rural development to be clustered onto portions of the site that are best suited to accommodate the development, and shall require access either directly onto a public road or via a privately maintained road designed to meet County road standards.	Consistent	The circulation and fire management plan (**FIG 2-10**) shows clustered development with accessible roads and trails.
Policy LU-3.4: The County shall limit lands designated for agricultural use to only allow single-family residences and quarters for farm laborers as secondary uses, agricultural tourism related uses, and agricultural support services.	Consistent	The Proposed Project's Agricultural Preserve Combining District would not include residential use exceeding single-family residences, as described in **Appendix GVD**. Furthermore, agricultural areas would only be utilized for agricultural related purposes in addition to agricultural tourism and support services.
Policy LU-3.6: The County shall encourage higher building intensities (at the high end of the density range) adjacent to parks and other open spaces, along transit routes, and near activity centers such as recreational facilities, libraries, shopping centers, and entertainment areas.	Consistent	The Proposed Project's residential areas will be surrounded in open-space and have access to on-site boutique shops, restaurants, a market, entertainment areas, and recreational opportunities, such as hiking, boating, and horseback riding.
Policy LU-3.8: The Rural Residential land use designation shall be subject to the following requirements: • Areas which qualify for densities greater than 1 unit per 10 acres must meet the following characteristics:	Consistent	The Proposed Project includes an amendment of the Guenoc Valley Site land use designation to Resort Commercial. New road improvements include entrances on Butts Canyon Road consistent with county standards.

General Plan Policy	Consistency Determination	Analysis
• average slopes must be below 30 percent grade; and, • areas not identified as a moderate-to-high landslide hazard area (special study zones). • Access to new development should be via an existing publicly maintained road or via a new road improved consistent with adopted county standards.		
Policy LU-3.10: The County shall allow uses (not related to forest production) on lands designated Resource Conservation in forestry production areas, provided the use or uses: • are consistent with the Aggregate Resources Management Plan or mining operations; • are consistent with the Geothermal Resources Element for geothermal activities; • are consistent with preservation of unique natural landmarks; • are compatible with sustainable forest practices; • are managed so as to minimize impact on designated Lake County viewsheds; • minimize forest site productivity losses; and, • will meet standards relating to the availability of fire protection, water supply, water quality, groundwater recharge and extraction, watershed management or restoration programs, and waste disposal.	Consistent	The Proposed Project does not include lands designated Resource Conservation in forestry production areas.
Commercial Development		
Policy LU-4.5: The County shall use the following guidelines for the proper development and location of commercial centers: • The market area should serve the community and surrounding areas • Typical uses include eating and drinking establishments, food and beverage sales, general personal services, entertainment services, and retail sales. Other uses such as supermarkets, administrative and professional offices, medical services, and financial, insurance, and real estate services may be included. • Where the surrounding area is an agricultural area, the center should include goods and services that serve agricultural needs, and venues for marketing of local, value-added agricultural products should be encouraged. • The center should be located where it can be easily accessed from at least one major local road. • Development should provide for adequate, appropriately placed parking to accommodate patrons to the market area	Consistent	The Proposed Project commercial developments would include centrally located market area featuring local produce, restaurants, winery, entertainment areas, and more. These businesses and areas would be available to the public, which would be accessible through Butts Canyon Road and ample parking would be provided for visitors.

General Plan Policy	Consistency Determination	Analysis
Policy LU-4.8: The County shall require free-standing, travel oriented visitor commercial uses (e.g., entertainment, commercial recreation, lodging, fuel) to be located in areas where traffic patterns are oriented to major arterials and highways. Exceptions may be granted for resort or retreat related developments that are sited based on unique natural features.	Consistent	The Proposed Project would be accessed through a major collector road, Butts Canyon Road, and Butts Canyon Road connects to the SR-29 and SR-175 in less than 5 miles to the east of the Guenoc Valley Site.
Economic Development		
Policy LU-6.1: The County shall actively promote the development of a diversified economic base by continuing to promote agriculture, recreation services, and commerce, and by expanding its efforts to encourage industrial and nonindustrial corporate development, and the development of geothermal resources.	Consistent	The Proposed Project will contribute to the diversification of the County's economic base through the development of a luxury agro-tourism resort that will include amenities such as vacation rentals, the Farmstead community center that will feature an amphitheater, farmers markets, and retail space.
Policy LU-6.4: The County shall encourage high quality development projects that will entice visitors, businesses, and permanent residents to the area.	Consistent	The Proposed Project intends to serve guests from all over the world by creating a luxury agro-tourism resort
Policy LU-6.5: The County shall pursue businesses such as upscale resorts and lodging, wineries and tasting rooms, visitor oriented retail businesses, and other businesses that would attract high income and multi-day visitors to the County.	Consistent	The Proposed Project would attract high income multi-day and long-term visitors through fractioned ownership options, boutique hotel options, and upscale resort amenities including spas, recreational uses, and a winery.
Policy LU-6.7: The County shall encourage community and regional events and recreational activities to bolster community pride and identification	Consistent	The Farmstead community center provides event space for outdoor concerts in the amphitheater, farmers markets, and retail spaces. The Resort also prioritizes outdoor recreational trails and activities creating community pride and expanding existing community outdoor-use space.
Policy LU-6.8: The County shall promote agro-tourism, eco-tourism, and outdoor recreation in Lake County to outside markets	Consistent	The Proposed Project promotes agro-tourism and outdoor recreation to Lake County and outside markets.
Policy LU-6.12: The County shall encourage development of resorts while ensuring land suitability and compatibility with surrounding land uses. Mixed Use Resort proposals requesting increased residential density may be considered outside of Community Growth Boundaries provided that: 1. The primary scope of the project is resort commercial 2. The resort provides substantial resort and recreational facilities that will be available to the public, and the project will specifically enhance the tourism objectives of the County. 3. The developer is able to adequately demonstrate that the additional residential units are necessary to support the infrastructure and public resort amenity costs for the overall project and the overall project is economically infeasible without the additional residential units. 4. The residential component is secondary and subordinate. 5. Applications are submitted as Planned Developments. For	Consistent	The Proposed Project would include Resort Commercial development compatible with surrounding land uses. The residential development supports the agro-tourism facilities.

General Plan Policy	Consistency Determination	Analysis
Mixed Use Resorts to include residential units, the development must be processed as a Planned Development. This process will be used to determine the appropriate number of residential units allowed. **6.12.1:** Except as provided in 6.12.2 below, the residential component of a Mixed Use Resort shall not allow more residential units than resort units during the course of construction and at build out. **6.12.2:** If a Mixed Use Resort is adjacent to a Community Growth Boundary and public infrastructure (sewer, water, fire, schools) are available, the number of residential units needed to support resort amenities may exceed the number of resort units, if it is determined that the project will specifically enhance tourism objectives of the County. However, the number of residential units compared to resort units shall not exceed a 2:1 ratio and in no case shall the residential density exceed one residential unit per gross acre of the total acreage of the Mixed Use Resort project area. (Resolution No. 2011-13, 1/25/2011)		
Policy LU-6.14: The County shall encourage clustering and smart growth concepts that promote fewer vehicle access points and enhance visual and pedestrian access	Consistent	The Proposed Project includes primary and secondary recreational trails for pedestrian access throughout the Guenoc Valley Site (**Figure 2-9**)
Design		
Policy LU-7.4: The County shall ensure that new development respects Lake County's heritage by requiring that development respond to its context, be compatible with the traditions and character of each community, and develop in an orderly fashion which is compatible with the scale of surrounding structures.	Consistent	The Proposed Project includes low impact development with low densities. The GVD zoning district would restrict heights to 40 feet (**Appendix GVD**). Additionally, the Proposed Project includes design features with high-end farm architecture to emanate the community's character.
Policy LU-7.5: The County shall encourage development of diverse and distinctive neighborhoods that build on the patterns of the natural landscape and are responsive in their location and context.	Consistent	The Proposed Project includes distinct clusters of development that are designed in response to the existing natural landscape.
Policy LU-7.9: The County shall emphasize each community's natural features as the visual framework for new development and redevelopment	Consistent	The Proposed Project includes designated open space and landscaping zones to highlight the existing natural features.
Policy LU-7.10: The County shall maintain visual access to views of Clear Lake, hillsides, creeks, and other distinctive natural areas by regulating building orientation, height, and bulk.	Consistent	The Proposed Project would restrict building heights and include clustered development (see **Appendix DG**). Reservoirs on the Guenoc Valley Site would be visual features of proposed development.
Policy LU-7.15: The County shall require screening of storage, trash receptacles, loading docks, and other building or site features required to reduce visual impacts from public areas. Screening shall consist of solid fencing, landscaping, or a combination of both.	Consistent	The GVD Zoning Ordinance Design Guidelines (**Appendix DG**) includes shielding and fencing of utility facilities and structures from the public viewshed.
Policy LU-7.17: The County shall provide code enforcement that protects the cultural and historic value of existing places and	Consistent	The Proposed Project includes efforts to protect culturally important resources.

General Plan Policy	Consistency Determination	Analysis
buildings. This should include demolition by neglect, lack of maintenance, overgrown landscaping, and inappropriate storage of items that may create a public safety or hazard issue.		
Housing Element (HE)		
New Construction		
Policy HE-1.9: The County shall place a priority on the development of new rental housing.	Consistent	On and off-site workforce housing would be leased to employees and local residents and would therefore increase the amount of new rental housing in the County.
Policy HE-1.14: The County shall promote infill development on appropriate sites in existing neighborhoods and reuse underutilized parcels throughout the county.	Consistent	This policy is not applicable to the Guenoc Valley Site because it is not located within an existing neighborhood. However, the Middletown Housing Area Site is located within an existing neighborhood and would constitute infill development.
Policy HE-1.15: Consistency with Surrounding Neighborhoods The County shall ensure that infill development maintains or enhances the positive qualities of the surrounding neighborhoods.	Consistent	This policy is not applicable to the Guenoc Valley Site because it does not constitute as infill development. However, the Middletown Housing Area site is located within an existing neighborhood and would constitute infill development. The Middletown Housing Area site would be generally consistent with the surrounding neighborhoods.
Energy Conservation and Production		
Policy HE-6.1: The County shall promote the use of energy conservation measures and energy production technology in residential units to conserve energy as well as reduce household utility costs.	Consistent	The Proposed Project would comply with all Title 24 energy efficiency standards and all electricity would be provided from on-site solar arrays.
Policy HE-6.3: The County shall encourage, where appropriate, energy efficient site planning in newly proposed land divisions to take advantage of the sun's natural heating abilities.	Consistent	The Proposed Project would comply with all Title 24 energy efficiency standards and all electricity would be provided from on-site solar arrays.
Jobs / Housing Balance		
Policy HE-7.3: The County shall encourage the jobs/housing linkages through the development of housing near jobs. The County shall attempt to increase the supply of affordable housing and support efforts to match job income and housing affordability levels.	Consistent	The Proposed Project would develop workforce housing, and increase the supply and diversity of housing stock options within Lake County that match the job income and affordability levels.
Public Facilities and Services (PFS) Element		
General		
Policy PFS-1.3: The County shall ensure that proposed developments do not create significant adverse impacts on existing natural or manmade infrastructure of the County and that the necessary man made infrastructure to support the project will be in place, bonded for, or other guarantee acceptable to the Approval Authority prior to the filing of final maps or granting of other entitlements.	Consistent	The Proposed Project would fund any necessary infrastructure improvements through mitigation measures in the EIR or through the Development Agreement.
Water Supply		

General Plan Policy	Consistency Determination	Analysis
Policy PFS-2.5: Development proposals that include general plan amendments and rezoning proposals that would result in increased water and wastewater demands above that projected by existing land use and zoning maps will be required to implement mitigation strategies to offset impacts to existing water and wastewater systems. Implementation of these strategies will become conditions of tentative maps and other entitlements.	Consistent	The Proposed Project includes mitigation for safe yield groundwater well monitoring to ensure less-than-significant effects to groundwater supplies.
Policy PSF-2.6: The County shall not approve new use permits or subdivisions unless an adequate supply of quality water and wastewater treatment capacity is available or will be developed prior to breaking ground for construction	Consistent	As analyzed in Section 3.14 Utilities, with construction of the Proposed Project, there would be adequate water and wastewater treatment capacity
Policy PFS-2.7: The County shall give priority to water conservation measures over development of additional water sources where mutually exclusive.	Consistent	The Proposed Project will include water efficient appliances
Policy PFS-2.8: Proposed new development exceeding twenty (20) dwelling units using surface water or ten (10) dwelling units using groundwater (or residential equivalent dwelling units) shall be required to prepare a water supply adequacy study that identifies where the source water is to come from as well as to the sustainability of the source water. The study shall be required prior to considering the application complete for processing in order to be considered during the CEQA review process.	Consistent	**Appendix WSA** is a water supply analysis for the Proposed Project.
Wastewater		
Policy PFS-3.1: The County shall develop, periodically review, and enforce adequate standards for septic tanks to protect water quality and public health. Use of individual septic systems shall be discouraged for larger residential and commercial developments and also for smaller developments where a public wastewater treatment facility is reasonably available. Larger developments should only occur where public wastewater treatment facilities with adequate capacity are available to serve the development.	Consistent	Clustered residential and commercial development on the Guenoc Valley Site would include package water reclamation plants, sized to accommodate the proposed development. The Applicant would coordinate with the County to ensure septic tanks are compliant with the County's standards.
Policy PFS-3.2: The County should promote and support programs to educate homeowners on the care and maintenance of septic systems.	Consistent	Under the Proposed Project, remote residential properties may have septic systems. Homeowners would be educated about these systems.
Policy PFS-3.3: The County should investigate alternative rural wastewater systems before investing in a costly conventional sewage system. For individual homes, such systems include elevated leach fields, sand filtration systems, evapotranspiration beds, osmosis units and holding tanks. In addition, composting toilets should be considered by the County for some situations, if determined to be appropriate and found not to pose a health risk. For clusters of homes, alternative systems include communal septic tank/leach field systems, package treatment plants, lagoon systems, and land treatment.	Consistent	The Proposed Project includes package water reclamation plants for clustered development areas. More remote residential parcels will have individual systems to avoid excessive costs associated with the extension of sewer.

General Plan Policy	Consistency Determination	Analysis
Policy PFS-3.4: The County shall require that developers meet all County wastewater requirements for adequate collection, treatment, and disposal prior to breaking ground for construction.	Consistent	The Applicant will coordinate with the County to ensure consistency with wastewater requirements
Policy PFS-3.5: The County shall minimize wastewater flows through water conservation efforts. Consideration should be given to allow use of gray water for landscape irrigation.	Consistent	The Proposed Project includes recycled water usage for landscape irrigation
Policy PFS-3.6: The County will promote the development of sewer systems and connection of land uses to sanitary sewer systems where (a) failing septic tanks, leachfield, and package systems constitute a threat to water quality and public health that cannot be remedied otherwise; or (b) future development will exceed acceptable standard for septic tanks (such as density or flow of effluent into the groundwater).	Consistent	The Proposed Project includes sewer systems for clustered development
Policy PFS-3.7: The County shall reduce the potential for future land use conflicts near sewer treatment facilities by minimizing development potential on surrounding parcels through zoning and land use designations that limit residential density and/or commercial intensity. Proposals for land division adjacent to sewer treatment facilities should not be approved unless large parcels can be provided with adequate, on - site buffers.	Consistent	All the proposed residential and commercial wastewater facilities are in areas that are remote for adjoining parcels and as planned will not have any potential impacts to the adjoining properties. The design and locations of these facilities will not result in any potential noise or odor nuisance conditions to adjoining property (**Appendix WATER**).
Solid Waste		
Policy PFS-5.3: The County shall ensure that all new facilities have the necessary provisions for solid waste storage, handling, and collection prior to issuing building permits	Consistent	The Proposed Project would utilize the Eastlake Sanitary Landfill, which has adequate capacity.
Policy PFS-5.4: The County shall require the proper disposal and recycling of hazardous materials and should investigate hazardous waste disposal needs for anticipated geothermal and agricultural toxic was	Consistent	During construction, undiscovered geothermal wells will be reported to the Department of Conversation and the County. Furthermore, all hazardous materials will be disposed of according to applicable federal, state, and local laws.
Public Utilities		
Policy PFS-6.3: The County shall require utility lines in new subdivisions to be placed underground, except where it is not feasible due to operational constraints.	Consistent	The Proposed Project includes underground utility lines where feasible
Fire Protection and Law Enforcement		
Policy PFS-8.1: The County shall promote expansion of fire protection service to continue to meet County needs	Consistent	The Proposed Project includes an emergency and fire response center
Policy PFS-8.3: The County shall require that all road networks (public and private) are designed to provide for safe and ready access for emergency fire equipment and provide an alternate route for evacuations.	Consistent	The Proposed Project includes road that are wide enough for emergency access vehicles and emergency evacuations
Policy PFS-8.4: The County shall ensure that all roads and buildings are properly identified by name or number with signs which are non-	Consistent	As per the Wildfire Prevention Plan (Appendix FIRE), addresses would be marked on the houses and driveways

General Plan Policy	Consistency Determination	Analysis
combustible and are clearly visible from main roadways.		
Policy PFS-8.5: The County shall continue to support the fire mitigation fee ordinance.	Consistent	Pursuant to Chapter 27 of the Lake County Code of Ordinances, prior to the issuance of any building permit or development permit, the Applicant will pay a fire mitigation fee proportionate to the square footage of development accounted for in the permit.
Policy PFS-8.7: The County shall promote public safety programs, including neighborhood watch programs, child identification and fingerprinting, public awareness and prevention of fire hazards, and other public education efforts.	Consistent	The Proposed Project includes the Wildfire Prevention Plan, which identifies wildfire prevention and response strategies for the Proposed Project. The Proposed Project does not specifically propose any further public safety programs; however, the Applicant would comply with any County initiatives regarding the development of public safety programs at the Guenoc Valley Site and the Middletown Housing Site.
Policy PFS 8.8: The County shall encourage the locations of fire and police stations to enable the minimum acceptable response time to service calls.	Consistent	The Proposed Project involves the development of an onsite emergency response facility, which will enable faster response times than currently existing. No existing fire or police stations will be expanded.
Community Facilities		
Policy PFS-9.1 The County should work closely with local school districts to develop solutions to the burden of overcrowded schools and to the financial constraints on constructing new facilities.	Consistent	Development impact fees from the Proposed Project would fund schools to provide adequate infrastructure improvements and resources (including desks, teachers, etc.) to support the addition of the students generated by the project.
Transportation and Circulation (T) Element		
Roads and Highways		
Policy T-1.2: Roads should be improved and constructed to the design standards recommended by the County Department of Public Works, as shown in Table 6-1, Lake County Road Design and Construction Standards. Road design standards shall be based on the American Association of State Highway and Transportation Officials (AASHTO) standards, and supplemented by California Department of Transportation (Caltrans) and County standards.	Consistent	All proposed roadway improvements would be consistent with applicable standards
Policy T-1.5: The following standards should be applied to the development of roads within residential areas: • Avoid locating facilities providing through-traffic access in residential areas. • Access to subdivisions proposing more than four lots should be via a paved road constructed to county standards. • Access to projects proposing four or fewer parcels at densities less than one dwelling unit per five acres should at a minimum be via a road improved with processed gravel consistent with county standards. • Roadways shall not be located on naturally occurring	Consistent	All proposed roadway improvements would be consistent with applicable standards

General Plan Policy	Consistency Determination	Analysis
asbestos when feasible alternative locations exist, or shall be adequately constructed and surfaced with non-asbestos materials in compliance with local and state requirements. • Adequate right-of-way to contain road improvements should be offered for dedication. • Parcels reconfigured through the lot line adjustment process shall contain adequate, safe, all-weather access. In cases where existing road access is not in conformance with current County standards prior to the adjustment, the level of conformity with those standards shall not be further reduced once the lot line adjustment is recorded. Lot line adjustments determined to increase development potential, including potential for future subdivision may be conditioned to require public right-of-way dedication if inadequate access exists or would force future access to a different street.		
Policy T-1.7: Facilities constructed or utilized for new development shall comply with County standards in order to minimize initial and subsequent maintenance costs.	Consistent	The Proposed Project includes mitigation to pay a fair-share for traffic improvements
Policy T-1.8: County maintained roadways should be improved and maintained to provide an adequate peak period Level of Service (LOS) of "C" or better for existing and anticipated traffic volumes if roadway upgrades are feasible, such as roadway widening, addition of lanes via re-striping, and other safety and operational improvements. The County shall allow a limited number of County roadway segments to operate at a level of service of "E" or better where improving the segment to LOS C are deemed infeasible due to cost, negative community and/or environmental impacts, and constructability issues. This "E" level of service for certain roadways shall not include any State Highway unless approved by Caltrans.	Consistent with mitigation	The Proposed Project includes mitigation for intersections below LOS C
Policy T-1.11: Develop and maintain roads and highways in a manner that protects natural and scenic resources.	Consistent with mitigation	With mitigation, impacts to natural resources from roadways would be less than significant. The design guidelines for the GVD (**Appendix DG**) include
Public Transport		
Policy T-2.4: The County should encourage potential transit destinations, including employment centers, schools, personal services, administrative and professional offices, and social/recreational centers, to be clustered within a convenient walking distance of one another and to a transit stop.	Consistent	The Proposed Project includes an employee shuttle.
Aviation		
Policy T-3.2 The County shall promote compatible land use planning in areas surrounding airports. Land uses involving the concentration of	Consistent	None of the development proposed for the sites or off-site infrastructure improvement areas are within 2 miles of an airport. However, all onsite aviation activities will comply with

General Plan Policy	Consistency Determination	Analysis
people and/or hazardous materials should not be developed in the approach pattern. Federal and state regulations governing operations and land use restrictions related to airports shall be supported by the County.		applicable federal and state regulations governing operations, including for hazardous materials.
Health and Safety (HS) Element		
General		
Policy HS-1.1: The County shall permit development only in areas where the potential danger to the health and safety of people can be mitigated to an acceptable level.	Consistent	Some of the development have existing hazards, such as naturally occurring asbestos, but these can be mitigated to acceptable levels.
Policy HS-1.3: The County shall ensure all buildings for human habitation are designed in compliance with the Uniform Building Code and other requirements based on risk (e.g., seismic hazards, flooding), type of occupancy, and location (e.g., floodplain, fault).	Consistent	All developments will be developed according to the Uniform Building Code
Policy HS-1.6: The County shall continue to implement its comprehensive grading ordinance in order to address dust mitigation including special mitigation for development within Naturally Occurring Asbestos areas.	Consistent with mitigation	During grading and other dust inducing activities, the development will adhere to the County's comprehensive order in order to mitigate dust. Furthermore, special mitigation will be developed for the areas with serpentine soils and therefore NOA.
Geologic and Seismic Hazards		
Policy HS-2.1: Areas in excess of 30 percent slope or in mapped naturally occurring asbestos areas may require submittal of engineered plans for all construction and grading, at the discretion of the Community Development Department. These plans shall address roads, utility corridors, and similar off-site improvements as well as erosion and dust control. Development in other areas possessing potential landslide risk, regardless of slope, shall require engineered plans and/or geotechnical study prior to discretionary approval or approval of grading or building permits	Consistent	The Proposed Project would obtain a grading permit from the County prior to any earthwork and comply with the County's building permit process
Policy HS-2.2: The siting of residential, commercial, recreational, or industrial structures on or adjacent to known active or potentially active fault zones should be avoided. In areas of known seismic hazards, building intensity should be dictated by a scale of acceptable risks as shown in Table 7-1.	Consistent	No residential, commercial, recreational, or industrial structures would be built on or adjacent to known active or potentially active fault zones as a result of the Proposed Project.
Policy HS-2.3: The County shall not allow development on existing unconsolidated landslide debris.	Consistent	A geotechnical investigation will be conducted prior to construction which would also recommend that buildings be located outside unstable areas and steep slopes with a setback of approximately 50-feet.
Policy GR-2.4: The County will encourage the development and testing of new technologies to further reduce environmental impacts. Additionally, Naturally Occurring Asbestos shall be avoided where feasible, or otherwise mitigated as necessary to minimize the release of asbestos dust.	Consistent	NOA shall be avoided if deemed feasible during construction. If not feasible, then during the construction and operation of the developments, if needed, mitigation measures shall be developed for NOA dust.

General Plan Policy	Consistency Determination	Analysis
Policy HS-2.10: The County shall limit construction of critical transportation structures across the trace of a known active or potentially active fault to those which cannot be reasonably constructed at another location.	Consistent	There would be no construction of critical transportation structures across the trace of a known active or potentially active fault as a result of the Proposed Project, as no known active or potentially active fault zones exist in or adjacent to areas of construction.
Policy HS-2.11: The County shall require that critical facilities be designed and constructed to remain functioning after the Maximum Probable Earthquake and to resist collapse in the event of the Maximum Credible Earthquake as specified in a detailed Geologic/Seismic report based on a site-specific investigation. An example includes designing utilities crossing fault zones to minimize damage by utilizing such measures as flexible units, valving, redundant lines, or automatic valves operated by differential pressure.	Consistent	A geotechnical investigation will be conducted prior to construction plan development to ensure critical facilities are resistant to collapse.
Air Quality		
Policy HS-3.2: The County shall require the use of the best available air pollution control technologies to maintain healthful air quality and high visibility standards, along with continuing compliance with State and Federal Ambient Air Quality Standards.	Consistent	The Proposed Project includes air quality mitigation
Policy HS-3.3: To reduce the number of vehicle trips and miles traveled, residential development should be in close proximity to places of shopping, play, and employment. Where feasible walking and bicycle trails, and cluster development should be considered.	Consistent	The Proposed Project is designed with low impact development and smart growth policies which features clustered development, resulting in fewer vehicle trips and miles traveled.
Policy HS-3.4: As unpaved roads are a major source of the County's particulate emissions, the County should require that all new roads and driveways for new projects that are in close proximity to adjacent residences or the public be paved or treated to reduce dust generation where feasible. Unpaved roads, driveways and parking areas should be considered for surfacing improvements when permits are granted for expanded use.	Consistent	Under the Proposed Project, newly paved and improved roadways would be constructed throughout the Project Site (refer to **Figure 2-11**). Additionally, during construction and grading, roads would be routinely watered to prevent dust density and minimize particulate emissions.
Policy HS-3.8: The County shall require consideration of alternatives or amendments that reduce emissions of air pollutants when reviewing project applications.	Consistent	As part of this Draft EIR, several alternative projects are considered and analyzed, where emissions of air pollutants are discussed (refer to **Section 5.0**). Additionally, the Proposed Project includes mitigation for emissions of air pollutants, such as a dust control plan. A full list of mitigation measures for air pollutants is located in **Section 3.**3.
Policy HS-3.9: The County may require an analysis of potential air quality impacts associated with significant new developments through the environmental review process, and identification of appropriate mitigation measures prior to approval of any major development project.	Consistent	**Section 3.3 Air Qualtiy** includes an analysis of potential air quality impacts of the Proposed Project.
Policy HS-3.10: The County shall require dust-suppression measures for grading activities, and asbestos dust hazard mitigation plans for projects located in Naturally Occurring Asbestos Areas.	Consistent with mitigation	During grading and other dust inducing activities, mitigation measures for dust suppression and specialized mitigation measures for NOA will be implemented.

General Plan Policy	Consistency Determination	Analysis
Policy HS-3.11: The County shall require that all projects requiring a grading permit or a building permit that would result in earth disturbance, in areas likely to contain naturally occurring asbestos, utilize approved asbestos dust mitigation measures as required by the LCAQMD, CARB and the Lake County Community Development Department	Consistent	Construction of the development areas shall require both grading and building permits. Therefore, adherence to the LCAQMD, CARB and the Lake County Community Development Department in terms of developing mitigation measures for NOA will be done.
Policy HS-3.12: The County shall adopt a mandatory disclosure program, where potential buyers and sellers of real property in all areas likely to contain naturally occurring asbestos are provided information regarding the potential presence of asbestos subject to sale. Information shall include potential for exposure from access roads and from disturbance activities (e.g., landscaping), and shall also include typical mitigation measures and legal requirements.	Consistent	Mitigation requires an Asbestos Dust Mitigation Plan and that disturbed surfaces containing naturally occurring asbestos be stabilized with vegetative cover, 3 inches of non-asbestos containing material, or paving.
Airport Hazards		
Policy HS-4.2: The County shall ensure that development within the airport approach and departure zones are in compliance with Part 77 of the Federal Aviation Administration Regulations (FAA regulations that address objects affecting navigable airspace).	Consistent	None of the development proposed for the sites or off-site infrastructure improvement areas are within airport approach and departure zones. However, the developments will be compliant with Part 77 of the Federal Aviation Administration Regulations due to the onsite floating plane dock.
Hazardous Materials		
Policy HS-5.1: The County shall strive to ensure that hazardous materials are used, transported, and disposed within the County in a safe manner and in compliance with local, state, and federal safety standards. Investigations and enforcement action shall be taken as necessary for any illegal hazardous waste disposal or other violations of federal, state, or local hazardous materials laws and regulations	Consistent	The construction and operation of the development areas shall adhere to all applicable local, state, and federal safety standards. If any violations are found regarding hazardous materials, the Applicant shall comply fully to remedy these violations.
Policy HS-5.2: The County shall work with Caltrans and the Highway Patrol to ensure that hazardous materials transported within the County are restricted to routes that have been designated for such transport.	Consistent	Transportation of the hazardous materials will be necessary as part of the development areas construction and operation. During transportation, all applicable local, state and federal regulation regarding transportation of hazardous materials will be follow in addition to County road restrictions for hazardous materials.
Policy HS-5.5: The County shall prevent incompatible land uses within close proximity to hazardous waste properties.	Consistent	There are no active hazardous wastes sites in close proximity to the development areas, and therefore there will be no inconsistency with land use.
Policy HS-5.6: The County shall review new development proposals to ensure that soils, surface water and groundwater are protected from contamination.	Consistent	The Applicant will submit a proposal to the county for review and comply with their findings concerning soils, surface water and groundwater.
Policy HS-5.11: The County shall require that developers have Phase I or Phase II environmental site assessments performed during the design phase on sites known to contain hazardous materials or which had previously been utilized for the handling or storage of hazardous materials	Consistent	The Applicant shall conduct a Phase I or Phase II should it be deemed necessary. However, no active hazardous material sites are within the development areas.
Flood Hazards		

General Plan Policy	Consistency Determination	Analysis
Policy HS-6.1: All development within the designated floodway or floodplain zones shall conform to Federal Emergency Management Administration regulations and the Lake County Flood Plain Management Plan.	Consistent with mitigation	The Proposed Project includes mitigation to ensure development within floodplains conforms to regulations.
Policy HS-6.2: The 100-year floodplain zones (as designated on maps prepared by the Federal Emergency Management Administration, refer to Figure 7-2) should be protected and maintained through strict limitation on land use. To carry out this policy, the following guidelines on development should be observed: • Critical facilities (those facilities which should be open and accessible during emergencies) should not be permitted. • Passive recreational activities (those requiring non-intensive development, such as hiking, horseback riding, picnicking) are permissible. • New development and divisions of land, especially residential subdivisions, shall be developed to minimize flood risk to structures, risk to infrastructure, and ensure safe access during flood conditions. • The County shall impose stringent controls on approvals of septic systems where there is a substantial likelihood of infiltration of floodwater into the systems, and/or the discharge from the systems into floodwaters.	Consistent with mitigation	The Proposed Project does not propose any critical facilities, residential structures or septic systems within a 100-year flood zone.
Policy HS-6.6: Prior to the approval of urban development project sites and projects within floodplain areas, the project applicant shall demonstrate that such development will not adversely impact downstream properties or contribute to flooding hazards.	Consistent with mitigation	The Proposed Project includes mitigation to ensure development within floodplains conforms to regulations and does not contribute to flood hazards.
Urban and Wildland Fire Hazards		
Policy HS-7.1: The County shall consult with the appropriate fire service district or California Division of Forestry in areas designated as high and extreme fire hazard, for particular regulations or design requirements prior to issuance of a building permit or approval of subdivisions (refer to Figure 7 - 3).	Consistent	The Proposed Project would actively work with CAL FIRE and local fire protection districts to establish and maintain programs for annual vegetation clearing and fuel breaks, as well provide consultation in regards to fire related regulations and design requirements.
Policy HS-7.2: In areas designated as high or extreme fire hazard, the County should encourage cluster developments to provide for more localized and effective fire protection measures such as consolidations of fuel build - up abatement, firebreak maintenance, fire fighting equipment access, and water service provision.	Consistent	With the implementation of the Wildfire Prevention Plan, wildfire risks within the Project Site would be greatly reduced, as a result of adding an additional fire response center, year round grazing and vegetation removal, fire breaks along main roadways, and incorporating fire resistant landscaping. In addition, fire safe building, which would include thoughtful materials and design, would be implemented to reduce wildfire risk. As a result of the Proposed Project, development would be clustered where appropriate to take advantage of fuel breaks to reduce fire danger.

General Plan Policy	Consistency Determination	Analysis
Policy HS-7.3: The County shall actively support fuel modification and reduction programs on public and private lands throughout the County, and shall encourage methods other than burning in order to minimize air quality impacts.	Consistent	The Proposed Project would actively work with CAL FIRE and local fire protection districts to establish and maintain programs for annual vegetation clearing and fuel breaks which would not impact air quality.
Policy HS-7.4: The County shall require the development of wildland fire management plans for projects adjoining significant areas of open space that may have high fuel loads.	Consistent	A Wildland Fire Management Plan would be imposed under the Proposed Project, which would include the implementation of fire-resistant landscaping, defensible space, and fire safe building, including projects adjoining significant areas of open space. In addition, an evacuation route map would also be provided.
Policy HS-7.5: Fuel breaks of at least 30 feet should be maintained around all structures. Additional fuel breaks or fuel modifications up to 100 feet around structures should be required when the fire officials find that extra hazardous conditions exist. Secondary fuel breaks up to 200 feet in width should be required when the fire authority finds that additional precautions are necessary. Fire buffers should be created along heavily traveled roads within high and extreme hazard areas by thinning, discing, or controlled burning. Parks, golf courses, utility corridors, roads, and greenbelts should be located so that they may serve a double function as fuel breaks.	Consistent	As a result of the implementation of the Wildfire Prevention Plan, techniques such as fire or fuel breaks, active landscape management, and irrigated green belts would be enforced. Typical fire breaks along roads would include 50 feet of fuel reduction zone on each side of the 25 foot primary roads. There would also be 100-foot fire breaks along particularly vulnerable areas along the Guenoc Valley Site boundary.
Policy HS-7.6: The County should consider fire hazards in evaluating development proposals. Within designated areas where population or residential building densities may be inappropriate to the hazards present, measures should be developed and adopted to mitigate risk to life and property loss. Lands designated as having high and extreme wildfire hazards may be developed provided that the following guidelines are satisfied: ▪ Development should be limited to Rural Residential or Rural lands only; and cluster development is encouraged. ▪ Developers and/or subsequent owners must assume responsibility for ongoing fire prevention maintenance activities for the project, including; abatement of fuel buildup, fire break maintenance, access provision, and provision of adequate water supply to meet fire flow. ▪ Separately developed dwellings with an individual private water supply shall provide an acceptable guaranteed minimum supply of water, in addition to the amount required for domestic needs.	Consistent	Although the development would not be rural residential, the Proposed Project is designed as cluster developments which would help to reduce fire risk. Additionally, in collaboration with the County, Cal Fire, design and engineering teams, and grazing consultants, the Proposed Project would be able to maintain an aggressive fire prevention program and would support and assist in the implementation of adopted emergency preparedness plans and regulations (Appendix FIRE). Furthermore, there would be adequate water supply on-site which would include fire hydrants which are designed to maintain a minimum of a two-hour flow, as well as surface water sources that can be drawn upon in the case of a wildfire emergency.
Policy HS-7.7: The exterior of residential units should be composed of fire resistant materials and designed to reduce fire vulnerability within high and extreme fire hazard areas.	Consistent	All buildings would comply with the California Fire Code and CBC, including the use of fire resistant building materials, such as solid wood doors, and non-combustible metal and tempered glass doors and windows. In addition, all residential structures would include fire suppression systems.
Noise (N) Element		

General Plan Policy	Consistency Determination	Analysis
Noise		
Policy N-1.1: The County shall consider the compatibility of proposed land uses, utilizing the standards in Table 8 - 1, with the noise environment when preparing or revising community area plans and when reviewing development proposals. Where proposed land uses are likely to produce noise levels exceeding the "normally acceptable" criteria (e.g. "conditionally acceptable", "normally unacceptable"), the County shall require an acoustical analysis prior to development approval to ensure noise mitigation measures are included. Land uses should be prohibited from locating in areas with a noise environment within the "unacceptable" range.	Consistent	Land uses are compatible with surrounding areas
Policy N-1.2: The County shall prohibit the development of new commercial, industrial, or other noise generating land uses adjacent to existing residential uses, and other sensitive noise receptors such as schools, health care facilities, and libraries if CNEL is expected to exceed 55 dBA during daytime (7Am to 10PM) or 45 dBA during nighttime (10PM to 7AM), measured at the property line of the noise sensitive land use, unless effective mitigation measures are incorporated into the project design.	Consistent	The Proposed Project does not propose new commercial, industrial, or other noise generating land uses directly adjacent to existing residential uses or other sensitive noise receptors.
Policy N-1.3: Indoor noise levels for residential uses shall not exceed 45 dBA CNEL.	Consistent	With standard building practices, the Proposed Project does not propose land uses that would increase indoor noise levels for residential uses above 45 dBA CNEL.
Policy N-1.4: The County should encourage proper site planning, architectural layout, and use of building materials as methods of noise attenuation. The following techniques should be considered to reduce noise impacts. ▪ Increase the distance between noise source and receiver through the use of building setbacks and/or dedication of noise easements. ▪ Place noise tolerant land uses such as parking lots, maintenance facilities, and utility areas between noise source and receiver. ▪ Use noise tolerant structures, such as garages or carports, to shield noise - sensitive areas. ▪ Orient buildings to shield outdoor spaces from a noise source. ▪ Use berming and heavy landscaping to reduce noise levels. ▪ Cluster office, commercial, or multiple family residential structures to reduce interior open - space noise levels. ▪ Locate automobile and delivery access to commercial or industrial uses abutting residential parcels at the maximum practical distance from residential uses. ▪ Use multi - glazed or multi - pane windows, tight fitting	Consistent	The Proposed Project will adhere to all County standards for noise reduction.

General Plan Policy	Consistency Determination	Analysis
doors, and dense building materials where feasible.		
Policy N-1.5: The County shall consider the compatibility of existing and proposed land uses located near highways and major roads. Noise abatement measures should be implemented in these circumstances to reduce noise impacts.	Consistent	The Proposed Project does not propose any land uses near highways or major roads.
Policy N-1.6: Ensure that new development in the vicinity of airports will be compatible with existing and projected noise levels as set forth in the Lake County Airport Land Use Commission (ALUC) Airport Land Use Compatibility Plan.	Consistent	The Proposed Project is not within the vicinity of an airport land use plan.
Policy N-1.7: The County shall require contractors to implement noise-reducing mitigation measures during construction when residential uses or other sensitive receptors are located within 500 feet.	Consistent	During construction of the Phase 1, sensitive receptors shall be within 500 feet of construction in certain areas. Therefore, **MM 3.10-1** will be implemented in addition to other County requirements in order to mitigate the noise impact that would ensue.
Policy N-1.10: The County shall enforce the State Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the Uniform Building Code.	Consistent	All construction performed as part of the Phase 1 and Future Phases shall comply with State Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the Uniform Building Code as required.
Policy N-1.13: The County shall incorporate policies pertaining to outdoor entertainment venues into the zoning ordinance ensuring the continued operation of existing venues and siting criteria for new developments.	Consistent	The Proposed Project includes periodic outdoor entertainment as an activity at the amphitheater, equestrian center and other areas. All of these activities shall adhere to the current local noise standards during the development of these facilities.
Policy N-1.14: The County shall utilize existing ordinances to establish limits on boating noise, with specific allowances for tournament races or similar events.	Consistent	The Proposed Project includes boating as a possible recreational activity on Upper Bohn Lake. While this activity is not anticipated to be a substantial source of noise, all boating activities will adhere to any applicable local regulations noise regarding boating activities.
Open Space, Conservation and Recreation (OSC) Element		
Biological Resources		
Policy OSC-1.1: The County should ensure the protection of environmentally sensitive wildlife and plant life, including those species designated as rare, threatened, and/or endangered by State and/or Federal government.	Consistent with Mitigation	A full analysis of habitats and species occurred for the Proposed Project. Through implementation of mitigation, the Proposed Project would not result in take of rare, threatened, and/or endangered wildlife. Additionally, rare, threatened, and/or endangered plant species have been identified for the Proposed Project, and any impacts would be offset through translocation or compensatory planting of rare, threatened, and/or endangered plants. These activities would be performed and monitored by a qualified biologist that would ensure minimum success criteria are met.
Policy OSC-1.2: The County shall limit the encroachment of development within areas that contain a moderate to high potential for sensitive habitat, and direct development into less significant	Consistent	The Proposed Project clusters development and provides for significant open space. Significant riparian corridors are included within dedicated open space, and impacts to oaks have been minimized through extensive avoidance measures. Additional

General Plan Policy	Consistency Determination	Analysis
habitat areas.		sensitive habits were identified and avoided as possible in project design. Mitigation has been included to offset unavoidable impacts.
Policy OSC-1.3: When reviewing development proposals, the County should encourage cluster development in areas with moderate to high potential for sensitive habitat.	Consistent	All resort communities utilize cluster development in order to minimize the total impact footprint. Non-dedicated open space is still maximized within the development areas.
Policy OSC-1.4: The County shall require that buildings and other forms of development be set back from riparian corridors to avoid damage to habitat.	Consistent	The majority of the project design has clustered development away from setbacks for riparian corridors. Additionally, significant riparian corridors and setbacks have been included within dedicated open space preservation.
Policy OSC-1.6: The County shall support the management of wetland and riparian plant communities for passive recreation, groundwater recharge, and wildlife habitats.	Consistent	Aquatic resources on the Guenoc Valley Site would result in a variety of uses from adjacent development for recreational purposes to complete preservation within dedicated open space. The dedicated open space is intentionally contiguous to promote landscape preservation features such as groundwater recharge. The overall design would allow access to certain aquatic habitat, including manmade reservoirs, while preserving significant habitat and allowing for passive enjoyment of sensitive areas.
Policy OSC-1.7: The County shall encourage the planting of native trees, shrubs, and grasslands in order to preserve the visual integrity of the landscape, provide habitat conditions suitable for native vegetation, and ensure that a maximum number and variety of well - adapted plants are maintained.	Consistent	Planting associated with mitigation will occur exclusively with plants native to the Guenoc Valley Site. Operation of the Proposed Project would similarly maximize use of native plant species to increase the visual aesthetic, maintain the natural landscape, and utilize those species that would require minimal maintenance.
Policy OSC-1.9: The County shall require buffer areas between development projects and significant watercourses, riparian vegetation, and wetlands.	Consistent	Avoidance of watercourses, riparian vegetation, and wetlands occurred during the design phase. Construction and development buffers have been included for avoided features. Mitigation and permitting terms have been included to offset impacts in cases where encroachment into riparian and wetland areas occurs.
Policy OSC-1.13: The County shall support the conservation and management of oak woodland communities and their habitats.	Consistent	The Proposed Project maximizes avoidance of oaks through intentional design, incorporation into landscape, development restrictions, and cluster of development. An Oak Mitigation Plan (**Appendix OAK**) consistent with **Policy OSC-1.13** has been prepared for the Proposed Project subject to Lake County approval.
Policy OSC-1.14: Prior to approving a specific plan or project, the County shall require a biological study to be prepared by a qualified biologist for proposed development within areas containing a moderate to high potential for sensitive habitat, sensitive wildlife species, and/or sensitive plant species. As appropriate, the study shall include the following activities: (1) inventory species listed in the CNPS Manual of California Vegetation; (2) inventory species identified by USFWS, DFG, and NMFS; (3) inventory special-status species listed in the CNDDB; and (4) conduct field surveys of the project site by a qualified biologist.	Consistent	A full analysis of biological resources on the Guenoc Valley Site and Middletown Housing Site was completed and is included as **Appendix BRA-Middletown**. Information from CNPS, USFWS, CDFW, NMFS and CNDDB were reviewed and incorporated into the analysis presented within the Environmental Impact Report. This was done consistent with **Policy OSC.-1.14**.

General Plan Policy	Consistency Determination	Analysis
Policy OSC-1.15: The County shall strive to protect natural resource areas, fish and wildlife habitat areas, scenic areas, open space areas, and parks from encroachment or destruction by incompatible development and invasive species.	Consistent	The Proposed Project would not result in the release or propagation of invasive species. Mitigation includes habitat restoration and removal of invasive species already present.
Policy OSC-1.18: The County shall ensure that lighting in residential areas and along roadways shall be designed to prevent artificial lighting from reflecting into adjacent natural or open space areas.	Consistent	The Guenoc Valley Site's roadways will be designed in a way to prevent lighting from reflecting into Project Site's designated Open Space.
Policy OSC-1.19: The County should incorporate the protection of sensitive habitat as nature areas where recreational facilities are proposed in these habitats.	Consistent	A significant portion of sensitive habitat is retained within designated open space. In areas where sensitive habitat occurs alongside natural recreational opportunities, such as the reservoirs, public signage will be posted to inform guests of the sensitive nature and importance of the habitat. Signage would additionally include measures to prevent degradation of habitat and restrictions on those activities allowable within and near sensitive habitat.
Scenic Resources		
Policy OSC-2.1: In the rural areas of the County (located outside of Community Growth Boundaries) structures built within the immediate foreground view of a scenic roadway should reflect the following guidelines. • Structures should be sited back, to the extent feasible, from the roadway edge a sufficient distance to minimize intrusion upon the natural features and backdrops as viewed from the roadway or adjacent residences. • Structures should be sited to minimize obstruction of views of significant natural features, such as Clear Lake and Mt. Konocti. Increased height should only be allowed when building orientation provides for increased side-setbacks that provide view corridors.	Consistent	The Guenoc Valley Site would be designed to be hidden from major roadways with the structures situated back from the roadways and in a way to not obstruct views of significant natural features.
Policy OSC-2.4: Within the designated scenic corridors, roadway improvements should be constructed in a manner which minimizes roadway width and thus, reduces domination of the view by road surface; and conforms to the natural contours of the land and minimizes extensive grading and removal of roadside vegetation.	Consistent	Roadway improvements for the Guenoc Valley Site would be done in a manner that minimizes roadway width and retains the natural aesthetic by limiting vegetation removal and follow natural contours of the land.
Policy OSC-2.5: Where possible, on-street parking should be prohibited to minimize obstruction of and intrusion upon views from the roadway except at strategically located turn-outs.	Consistent	On-street parking would be minimized to the fullest extent possible and. Additionally, areas of parking shall be screened from view whenever possible, hidden behind trees and vertical screens, including trellises and canopies.

General Plan Policy	Consistency Determination	Analysis
Policy OSC-2.6: Commercial parking areas within scenic corridors should be designed to provide attractive open areas, which complement and expand scenic views. Special consideration should be given to these parking areas as to their physical location, layout, and landscaping in an effort to make them an asset in the preservation of scenic corridor values.	Consistent	Due to the entire Guenoc Valley Site not being visible by scenic roadways, parking areas would be hidden from scenic roadways.
Policy OSC-2.9: The siting of transmission lines shall avoid interfering with scenic views to the greatest extent possible, taking into account the design and size of the transmission towers, the nature of the landscape, and the placement of the transmission towers in the landscape. New high voltage transmission facilities (115 K.V. lines and above) shall not be sited along foreground views (up to 1/4-1/2 mile) of potential state and county scenic highways (as designated in the state and county scenic highways or designated in the county general plan, or community areas), or major resorts or wineries unless no feasible alternatives exist. In situations where no feasible alternatives exist, undergrounding or other visual mitigation measures shall be imposed.	Consistent	The electrical infrastructure at the Guenoc Valley Site will change from all overhead distribution service to a mix of overhead and primarily underground service, however infrastructure will largely be installed underground in the subdivisions and resort properties. Although the Proposed Project will include the installation of approximately 8 miles of overhead cables and poles to connect the development areas, they will be installed in locations that will avoid interfering with scenic views to the greatest extent possible.
Policy OSC-2.11: Man-made slopes should be revegetated to reflect natural hillside conditions in the surrounding area, to the extent feasible and in accordance with the County's Grading Ordinance.	Consistent	Both the Guenoc valley site and the Middletown Housing Site would comply with the Lake County Grading Ordinance and include revegetation if necessary.
Policy OSC-2.13: County shall require that all outdoor light fixtures including street lighting, externally illuminated signs, advertising displays, and billboards use low-energy, shielded light fixtures which direct light downward (i.e., lighting shall not emit higher than a horizontal level). Where public safety would not be compromised, the County shall encourage the use of low energy lighting for all outdoor light fixtures.	Consistent	The Proposed Project would incorporate lighting that is directed downward and use low energy lighting. Street lighting would be limited to areas where needed for safety.
Policy OSC-2.14: Street lighting should only be utilized where needed to protect public safety.	Consistent	The Proposed Project would incorporate lighting that is directed downward and use low energy lighting. Street lighting would be limited to areas where needed for safety.
Policy OSC-2.16: The County shall require the use of low glare building materials for new buildings constructed within the county.	Consistent	The Off-Site Workforce housing and the Guenoc Valley Site developments would utilize low glare building materials.
Energy Resources		
Policy OSC-5.1: The County shall require the use of energy conservation features and clean alternative energy use in new construction and renovation of existing structures in accordance with state law.	Consistent	Energy use, including all future construction and renovation projects, shall be in accordance with state law, by requiring clean alternative energy use to the greatest extent possible. This would include the development of solar energy to meet the demand of all residential uses within the Guenoc Valley Site, as well as requiring the use of energy efficient lighting and appliances. Additionally, Mitigation Measure 3.1-7 would require commitment to solar energy to meet the demand of all commercial facilities.

General Plan Policy	Consistency Determination	Analysis
Policy OSC-5.2: The County should encourage the planting of shade trees along streets within new residential subdivisions to reduce radiation heating. Use of native species shall be encouraged.	Consistent	The Proposed Project includes a detailed landscape plan which include the planting of shade trees and use of native species to preserve the existing natural and rural character.
Parks and Recreation		
Policy OSC-6.5: The County should encourage private interests to establish new commercial recreation opportunities and to rehabilitate and restore existing older resorts. Such facilities include, but are not limited to destination resorts, lakefront resorts, dance halls, health and athletic clubs, equestrian facilities, and recreational camps.	Consistent	The Proposed Project includes the development of resort amenities including but not limited to an outdoor entertainment area, spa and wellness amenities, sports fields, equestrian areas, a new golf course, camping area and commercial and retail facilities.
Policy OSC-6.7: The County shall support the continued maintenance and improvement of existing recreational facilities and expansion of new recreational opportunities on county, state, and federal lands.	Consistent	Because the Proposed Project does not include the development of park areas, the parkland dedication shortfall is proposed to be made up by the Applicant's in-lieu fee payments to the Lake County Planning Commission pursuant to Chapter 17 of the Lake County Code of Ordinances. These in-lieu fees will be used by the County for the maintenance and improvement of existing recreational facilities and expansion of new recreational opportunities on county, state, and federal lands.
Policy OSC-6.12: The County shall preserve natural open space resources through the concentration of development in existing communities, use of cluster development techniques, maintaining large lot sizes in agricultural areas, avoiding conversion of lands currently used for agricultural production, and limiting development in areas constrained by natural hazards.	Consistent	The Proposed Project incorporates low-impact development techniques and clustered communities. The density of the Proposed Project is low
Policy OSC-6.13: An integrated multi-purpose trail system should be developed that provides access to recreational facilities, as well as offering a recreational experience apart from that available at the neighborhood and community parks.	Consistent	Under the Proposed Project, recreation features, such as trails, docks, beaches, vista points, picnic areas, swimming, boating, and fishing opportunities, would be provided at Upper Bohn Lake. Additionally, a non-vehicular circulation system would be developed to connect all development areas of the project site and natural destinations. Off-road trails traversing more rugged terrain would be developed for use with hiking, horseback, and mountain bike riding.
Policy OSC-6.16: Create trail linkages and loops with other public facilities (such as parks, open spaces, trail systems of other jurisdictions), communities, points of interest, visitor attractions and/or with educational or historical significance.	Consistent	A non-vehicular circulation system would be developed throughout the Guenoc Valley Site. These trails would extend through the open space areas within the site to connect many of the resort planning areas and natural destinations, and will provide recreational walking, running, hiking, biking, and horseback riding opportunities.
Policy OSC-6.18: Create trails of different lengths and terrains to provide a variety of recreational experiences. Allow for different styles of trails (nature, hiking, equestrian, etc.) to stem off of the main system.	Consistent	A non-vehicular circulation system would be developed to connect all development areas of the project site and natural destinations. Off-road trails traversing more rugged terrain would be developed for use with hiking, horseback, and mountain bike riding.
Policy OSC-6.20: Provide lighting, Rest Areas, and Signage to maintain safe trails. Determine the safest areas for trail locations.	Consistent	Under the Proposed Project, off-road trails traversing more rugged terrain would be developed for use with hiking, horseback, and

General Plan Policy	Consistency Determination	Analysis
Encourage local law enforcement agencies to use the trail system as part of their physical training.		mountain bike riding. The onsite emergency response team would be encouraged to utilize the trail system as part of their physical training regime.
Cultural Resources		
Policy OSC-8.3: When planning any development or alteration of a site with identified cultural or archaeological resources, ways of protecting the resources shall be developed and implemented. Development will be permitted in these areas only after a site specific investigation has been conducted pursuant to CEQA to define the extent and value of resource, and mitigation measures proposed for any impacts the development may have on the resource.	Consistent	Investigations have been completed for Phase I development areas and mitigation measures have been developed to both protect known resources and ensure that future phase development areas are investigated in a similar fashion. Mitigation measures include development of an Unanticipated Discoveries Plan which would guide identification of extent and value of resources.
Policy OSC-8.7: The County shall continue to solicit views from the local Native American communities regarding cultural resources to identify locations of importance to Native Americans, including archaeological sites and traditional cultural properties. Coordination with the Native American Heritage Commission should begin at the onset of a particular project. Any changes, modifications, or additions to the Lake County General Plan will require consultation with local Native American representatives prior to adoption, as specified in California Senate Bill (SB) 18.	Consistent	The NAHC has been contacted on three separate occasions, two for the Guenoc Valley Site and once for off-site improvements. The County has initiated SB 18 and AB 52 consultation with multiple Native American tribes and is in active consultation with Middletown Rancheria.
Policy OSC-8.8: The County shall, within its power, maintain confidentiality regarding the locations of archaeological sites in order to preserve and protect these resources from vandalism and the unauthorized removal of artifacts.	Consistent	Cultural resources reports and resource location information have been generally discussed in the EIR, but no record search results, site record forms, or cultural resources maps have been included in publicly accessible documents.
Policy OSC-8.11: The County shall develop standards for monitoring of mitigation measures established for the protection of historical resources prior to development.	Consistent	The EIR includes provisions for construction monitoring in order to protect historical resources.
Policy OSC-8.13: In the event that archaeological/paleontological resources are discovered during ground disturbing activities, the County shall require that grading and construction work within 100 feet of the find shall be suspended until the significance of the features can be determined by a qualified professional archaeologist/paleontologist as appropriate. The County will require that a qualified professional archaeologist/paleontologist make recommendations for measures necessary to protect the find; or to undertake data recovery, excavation, analysis, and curation of archaeological/paleontological materials as appropriate.	Consistent	Mitigation Measure 3.5-2 requires procedures for the discovery of cultural resources consistent with this County policy.
Policy OSC-8.14: Pursuant to CEQA Guidelines (Section 15064.5), if human remains are discovered during project construction, it is necessary to comply with state laws relating to prohibitions on disinterring, disturbing, or removing human remains from any location other than a dedicated cemetery (California Health and Safety Code Section 7050.5). If human remains of Native American origin are discovered during project construction, it is necessary to comply with	Consistent	Mitigation Measure 3.5-4 details the procedure to be followed if Native American burials are uncovered.

General Plan Policy	Consistency Determination	Analysis
State laws relating to the disposition of Native American burials, which fall within the jurisdiction of the Native American Heritage Commission (Public Resources Code Sec. 5097). If any human remains are discovered or recognized in any location on the project site, there shall be no further excavation or disturbance of the site or any area reasonably suspected to overlie adjacent human remains until: A. The Lake County Coroner/Sheriff has been informed and has determined that no investigation of the cause of death is required; and 1. If the coroner determines that the remains are of Native American origin, a. The coroner shall contact the Native American Heritage Commission within 24 hours b. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendent (MLD) from the deceased Native American. c. The MLD shall have an opportunity to make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or B. Pursuant to Section 5097 of the Public resources Code, if the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation, or the landowner or his or her authorized representative rejects the recommendation of the descendents and the mediation provided for in subdivision (k) of Section 5097.94, if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall reinter the human remains and items associated with Native American human remains with appropriate dignity on the property in a location not subject to further and future subsurface disturbance. To protect these sites, the landowner shall do one or more of the following: 1. Record the site with the commission or the appropriate Information Center. 2. Utilize an open-space or conservation zoning designation or easement. 3. Record a document with the county in which the property is located.		

General Plan Policy	Consistency Determination	Analysis
Water Resources (WR) Element		
Groundwater Protection		
Policy WR-1.1: In known groundwater recharge areas, the predominant land use and resource activities should allow for the continued recharge of the groundwater basin and protect groundwater quality. Clustered development should be encouraged to promote open space and maintain infiltration. Regulations may include, but are not limited to, the limitation of structural coverage and impervious surfaces and prohibition of uses with the potential to discharge harmful pollutants, increase erosion, or create other impacts degrading water quality. The County will, wherever feasible, incorporate groundwater recharge strategies into land use practices, project siting and design. The use of permeable surfacing materials shall be strongly encouraged in these areas.	Consistent	The Proposed Project is designed with low impact development and smart growth policies. The resort features low density clustered development which would preserve open space, allowing for groundwater recharge through the percolation of rainwater. Under the Proposed Project, impervious surfaces will be limited to the greatest extent possible.
Water Quality		
Policy WR-2.1: All proposed land use and development plans should be evaluated as to their potential to create surface and groundwater contamination hazards from point and non-point sources. Effects include, but are not limited to: soil erosion; direct discharge of potentially harmful substances; ground leaching from storage of raw materials, petroleum products, or wastes; floating debris by runoff from the site.	Consistent	Under the CWA, the Proposed Project would implement a NPDES permit which would require continual monitoring and enforcing of provisions to control non-point and point source water pollution from surface water and groundwater supplies.
Policy WR-2.2: The County shall continue to monitor and enforce provisions to control non - point source water pollution contained in the United States Environmental Protection Agency NPDES program.	Consistent	Under the CWA, the Proposed Project would implement a NPDES permit which would require continual monitoring and enforcing of provisions to control non-point source water pollution.
Policy WR-2.3: The County shall continue to enforce provisions to control erosion and sediment from construction sites.	Consistent	As a result of implementing a SWPPP and an Aggregate/Concrete Monitoring and Reporting Control Program, issues related to erosion and sediment at construction sites would be less than significant.
Policy WR-2.4: The County shall continue to require the use of feasible and practical best management practices (BMPs) to protect surface water and groundwater from the adverse effects of construction activities and urban runoff.	Consistent	Under the Proposed Project, the implementation of a SWPPP, an Aggregate/Concrete Monitoring and Reporting Control Program, and associated BMPs would be required, resulting in a less than significant effect on surface water and groundwater as a result of construction activities and urban runoff.
Policy WR-2.5: The County shall ensure the design of facilities and management of storm water runoff in a safe and environmentally sustainable manner. This will be accomplished through the proper siting, design and operation and maintenance of storm drainage collection and drainage facilities so as to protect the people, property and environment including the quality of runoff water and receiving water.	Consistent	Under the Proposed Project, a Stormwater Design Report has been prepared to minimize impacts related to stormwater runoff as a result of development, including roadways, residential areas, and commercial areas. Methods include but are not limited to the use of vegetated swales, sediment forebays, bio-retention areas, and self-treating areas.

General Plan Policy	Consistency Determination	Analysis
Water Resource Sustainability		
Policy WR-3.2: The County shall review new development proposals to ensure the intensity and timing of growth will be consistent with the availability of adequate water supplies. Projects must provide evidence of water availability prior breaking ground for construction	Consistent	Under the Proposed Project, off-site groundwater well hydraulic analysis and monitoring as well as a Water Supply Assessment would be required before and during all phases of construction in order to monitor current and future water availability (refer to **Appendix WSA**).
Conservation and Reuse		
Policy WR-5.1: The County shall require the use of water conservation techniques appropriate for new development. Such techniques include, but are not limited to; requiring low flow plumbing fixtures on new construction, the use of high efficiency irrigation systems, use of gray-water for landscaping, the integration of storm water runoff into passive groundwater recharge, the use (when feasible) of reclaimed water resources for reasonable and beneficial use and the use of drought-tolerant vegetation.	Consistent	As part of a project wide measure, new development would be designed to conserve water through the use of drought resistant vegetation and low flow appliances and fixtures. Also state-of-the-art irrigation systems that reduce water consumption including graywater systems and rainwater catchment would be implemented.
Policy WR-5.5: The County shall require the use of water-conserving appliances and fixtures in all new development, as mandated by State law (California Health and Safety Code, Section 17921.3; Title 20, California Code of Regulations, Section 1601(b); and other applicable sections of Title 24 of the California Code of regulations).	Consistent	As part of a project wide measure, new development would be designed to conserve water low flow appliances and fixtures, including low flow plumbing features.
Policy WR-5.8: The County shall take appropriate measures in the issuance of discretionary entitlements and the application of Zoning districts to seek out opportunities to expand the utilization of reclaimed wastewater (tertiary treated and secondary treated) for other reasonable and beneficial uses. Those uses include, but are not limited to: groundwater recharge, irrigation of agricultural lands, irrigation of landscaped areas, geothermal recharge, and environmental restoration and enhancement projects.	Consistent	The Proposed Project incorporates wastewater reclamation for landscape irrigation and other outdoor uses.
Policy WR-5.9: To augment groundwater supplies and to conserve potable water for domestic purposes, the County should seek opportunities to expand the use of reclaimed wastewater for all beneficial uses.	Consistent	Under the Proposed Project, small biological package style treatment systems would be installed at the Maha Farm, Redhill/Renaissance Golf Course, Resort at Trout Flat, Central Back of the House, Equestrian Center, Bohn Ridge Resort, the Spa, On-Site Workforce Housing, and the Camping Area, which would treat and recycle wastewater for future use.
Agricultural Resources (AR) Element		
Agricultural Protection		
Policy AR-1.3: The County shall limit non-agricultural development in the unincorporated portions of the County designated as Primary Agricultural Areas, as follows: • For new land divisions or lot line adjustments, the County shall maintain a minimum parcel size large enough to sustain agricultural use outside of the Community Growth	Consistent	The Proposed Project includes parcel boundaries within Primary Agricultural Areas. The smallest of these parcels is 3.2 acres, which is large enough to sustain agricultural use. Additionally, Mitigation Measure 3.2-2 includes acre-for-acre permanent conservation for development upon Important Farmlands (Prime and Unique Farmlands).

General Plan Policy	Consistency Determination	Analysis
Boundaries. • The County's rules for parcel sizes shall be based on slope, local agricultural conditions, and the need to ensure the viability of agricultural operations. Residential uses in support of agricultural operations are allowed if appropriate buffers from agricultural uses are provided (see Policy AR-1.6, Buffers).		
Policy AR-1.4: With the exception of allowable resort, support commercial uses, agricultural industry, and farmworker housing, non-agricultural development should be directed to appropriate areas within the Community Growth Boundaries and the cities of Clearlake and Lakeport (including areas within adopted spheres of influence).	Consistent	The Guenoc Valley Site will be resort development and the Middletown Housing Site is within a Community Growth Boundary.
Policy AR-1.5: As a condition of approval of a discretionary development permit, relating to property located inside a Primary Agricultural Area or within 1,000 feet of agricultural land or agricultural operations, the County will ensure all property owners and/or applicants are informed of the potential agricultural operations in the area and agricultural conditions in the area and will be required to sign and record a deed notification containing the information in the County's Zoning Ordinance (Section 21-4.18, Notice of Farming Practices) with the deed for the property(ies) involved.	Consistent	All residents within 1,000 feet of agricultural land would sign the Right to Farm form prior to obtaining the property deed.
Policy AR-1.6: To protect current agricultural activities, the County shall require an appropriate buffer between existing agricultural uses and proposed residential dwellings or other inhabited structures in the Primary Agricultural Areas. Buffer design and maintenance will be required based on site conditions, but will incorporate, at a minimum, the following: • Buffers shall be located on the parcel(s) for which a permit or approval is sought. • Buffers shall be sized and physically designed to avoid conflicts between agriculture and non-agricultural uses. The size of the buffer shall be determined on a site-by-site basis taking into account the type of existing agricultural uses, the nature of the proposed development, the natural features of the site, and any other factors that affect the specific situation. A minimum buffer of 100 feet from a property used for commercial agricultural purposes shall be required. • Buffer areas can be incorporated into the adjacent agricultural areas if the new development can purchase a conservation easement from the agricultural entity to restrict operations that may drive a large buffer area (e.g., eliminating spraying on the adjacent area). • In larger buffer areas (such as along the outer edge of a	Consistent with mitigation	The majority of the Primary Agricultural Areas would be within the proposed Agricultural Preserve Combining District, which restricts residential development to one single-family dwelling (**Appendix GVD**). A small portion of Unique Farmland would occur within the Maha Farm residential estate parcels, however, there would be acre-for-acre conservation easements under Mitigation Measure 3.2-2, and the easements would have a 100 foot buffer between residential and agricultural uses.

General Plan Policy	Consistency Determination	Analysis
community), appropriate types of land uses for buffers include compatible agriculture, open space and recreational uses such as parks and golf courses, industrial uses, and cemeteries. • The County shall condition projects to ensure the on-going maintenance of buffers. • Buffer restrictions may be removed if agricultural uses on all adjacent parcels have permanently ceased. • Development of a residential unit owned by the agricultural operator on that (or adjacent) property is exempt from the provisions of this policy. • The County will encourage property owners and developers to place new homes on a site to maximize the distance of that unit from adjacent agricultural uses. • The County will ensure that adequate buffers are maintained when a lot line adjustment is requested. • For pre-existing, legally created parcels where the minimum or appropriate buffer can not be provided, the buffer shall be maximized on the site.		
Policy AR-1.7: Extension of services, such as sewer and water lines and roadways, into areas preserved for agriculture use should be avoided. Where necessary, they should be located in public rights-of-way in order to prevent interference with agricultural operations and to provide ease of access for operation and maintenance. Service capacity and length of lines shall be designed to prevent the conversion of agricultural lands into urban/suburban uses.	Consistent	Where feasible, sewer and water lines would be constructed along roadways. Agricultural Preserve Combining District areas would only allow one single-family dwelling.
Policy AR-1.8: The County should discourage the parcelization of land within the designated Primary Agricultural Areas that would divide land into units too small to economically support a viable agricultural operation and which contributes to the transition of agricultural lands to non-agricultural uses.	Consistent	. The Proposed Project includes parcel boundaries within Primary Agricultural Areas, however the smallest of these parcels is 3.2 acres, which is large enough to sustain agricultural use. Additionally, under **Mitigation Measure 3.2-2**, the Proposed Project would require acre for acre permanent conservation, which would require that every acre of Prime Farmland or Unique Farmland converted would result in the same number of acres of equivalent Important Farmland preserved somewhere else on the property or within the vicinity.
Policy AR-1.12: The County shall encourage the use of agricultural and conservation easements to preserve agricultural land.	Consistent	As a result of the implementation of **Mitigation Measure 3.2-2**, the Proposed Project would require acre for acre permanent conservation, which would require that every acre of Prime Farmland or Unique Farmland converted would result in the same number of acres of equivalent Important Farmland preserved somewhere else on the property or within the vicinity.
Agricultural Enhancement		
Policy AR-2.1: The County should continue to support programs of	Consistent	The Proposed Project encourages the economic development of

General Plan Policy	Consistency Determination	Analysis
agricultural technical assistance and should cooperate with public and private groups to promote the economic development of agricultural areas.		agricultural areas by incorporating market gardens, and local businesses in the Maha Farm area
Policy AR-2.3: The County shall encourage the development of agricultural economic zones, promoting the development of agriculturally-related uses such as wineries, olive press facilities, and other agricultural processing facilities, to increase the overall agricultural viability of the County.	Consistent	The Proposed Project includes agro-tourism features such as farm-to-table restaurants and wineries. The Maha Farm area would feature a market for local agricultural products.
Policy AR-2.4: The County shall allow, by discretionary permit in areas designated Primary Agricultural Areas, agriculturally-related uses, including value-added processing facilities, and certain non-agricultural uses. Approval of these and similar uses in areas designated Agriculture shall be subject to the following criteria: a. The use shall provide a needed service to the surrounding agricultural area which cannot be provided more efficiently within urban areas or which requires location in a non-urban area because of unusual site requirements or operational characteristics; b. The operational or physical characteristics of the use shall not have a detrimental impact on water resources or the use or management of surrounding properties within at least one-quarter (1/4) mile radius; c. The activity must be found to support agricultural operations, production, or processing within the County; and Lake County General Plan September 2008 Page 12-10 **d.** For proposed value-added agricultural processing facilities, the evaluation under criteria "a" above, shall consider the service requirements of the use and the capability and capacity of cities and unincorporated communities to provide the required services.	Consistent	The Proposed Project includes resort development that is not able to occur in urban areas and would support agricultural operations
Policy AR-2.8: Within the Primary Agricultural Areas, the County will permit agriculturally- related commercial uses that meet the following criteria: • Uses shall be limited to those that promote agricultural production in the County • All agricultural processing and marketing facilities shall be encouraged to utilize products grown or derived from Lake County. • Direct-market stands shall be allowed in agricultural areas • The use is compatible with existing agricultural uses in the area and does not adversely impact agricultural operations • The use does not require the extension of urban services (sewer and/or water service)	Consistent	The Proposed Project shall feature local agricultural products in the Maha Farms area and will be compatible with surrounding vineyard developments

General Plan Policy	Consistency Determination	Analysis
• No facilities supporting or offering off-road vehicles.		
Agricultural Tourism		
Policy AR-3.1: The County should establish criteria for, and amend the zoning ordinance to allow development of agricultural tourism facilities, as long as the facility is secondary and incidental to the commercial agricultural use on that site and the tourism activity does not negatively impact agricultural operations on adjacent lands, based upon parcel size, proposed use and the parcels ability to provide adequate buffer zones. **1.** Small-Scale Facilities. Facilities may be permissible if they meet the following conditions (in addition to a standard site suitability assessment as part of a normal minor use permit): **a.** The facility is approved subject to maintaining an agriculturally oriented theme **b.** The use is compatible with existing agricultural uses in the area and does not adversely impact neighboring agricultural operations **c.** The use does not require the extension of urban services (sewer and/or water service) **d.** No motorized off-road vehicles for recreational purposes (no use restrictions when used to support agricultural operations) **2.** Large-Scale Facilities. Facilities may be permissible if they meet the following conditions (in addition to a standard site suitability assessment as part of a normal major use permit): **a.** The facility is approved subject to maintaining an agriculturally oriented theme **b.** The use is compatible with existing agricultural uses in the area and does not adversely impact neighboring agricultural operations **c.** The site is accessible from a County or State maintained roadway or highway **d.** No motorized off-road vehicles for recreational purposes (no use restrictions when used to support agricultural operations)	Consistent	The GVD zoning district allows for the development of agricultural tourism facilities consistent with surrounding land uses. Facilities would maintain an agricultural theme, would be accessible by Butts Canyon Road (a state maintained roadway) and would not allow motorized off-road vehicles for recreational purposes.

NOTES:

1. Maha Farms: Marketplace & Resort includes the proposed Lagoon Earthwork Quantity, calculated by PCI.
2. Golf Course Earthwork Quantity was calculated by Tom Doak. The fill volume includes imported sand quantities.
3. Excess fill is considered to be within the margin of error, which could be attributed to displaced fill from factors unknown at this time. Some examples of these factors include utility trenching, structural foundations, and unusable soil materials. The goal of the project as a whole is to maintain a balanced earthwork scenario within the site's boundaries, with no offhaul of soil offsite.

APPENDIX GVD

PROPOSED GUENOC VALLEY DEVELOPMENT (GVD)
ZONING DISTRICT

ARTICLE 14 REGULATIONS FOR THE GUENOC VALLEY ZONING DISTRICT OR "GVD" DISTRICT

14.1 Purpose: The intent and purposes of the "GVD" are as follows:

(a) Implement the goals, objectives, and policies of the 2008 Lake County General Plan as furthered by the 2010 Middletown Area Plan Special Study Area designation for this site;

(b) Provide development standards to facilitate economical, efficient, and coordinated development for 1) Agricultural, 2) Resort, 3) Residential, 4) Commercial, and 5) managed rural lands;

(c) Allow for the creation of a mixed land use designation to further the goals of the Middletown Area Plan. Include cluster development standards, lot coverage, setbacks, density, and site layouts to encourage smart growth and creative building design and site planning;

(d) Create a mixed use planned development with a low density, agricultural focused luxury destination resort with accessory commercial serving uses including wineries and restaurants, and residences;

(e) Encourage a mix of land uses that supports the resort, compliments the heritage of existing agricultural land uses, and protects natural resources and scenic landscapes;

(f) Encourage innovative land management techniques, ranchland, and grazing practices to protect against wildfire, preserve open space, provide agritourism opportunities, and promote diversified agricultural practices, in conjunction with planned luxury resort and accessory uses, and

(g) Protect agricultural uses, sensitive wetland and riparian habitat areas within the GVD and surrounding open space.

The GVD principal district will include phased development consistent with these development standards.

14.2 Applicability: Applications for "GVD" zoning shall be for a parcel or contiguous parcels of land within the areas designated as "Special Study Area Number 3" in the Middleton Area Plan as adopted in 2010 (and modified___, 2020) and the application process shall be consistent with the rezoning process (Section 21 Article 47).

(a) Amendments to this chapter may be approved by resolution of the Board of Supervisors.

14.3 Conflicts with other County regulations: If any provision of this Chapter conflicts with any provision of any regulation contained in any previously adopted Ordinance of the County, the provisions of this Chapter shall be controlling. Where not addressed, general zoning requirements apply.

14.4 Definitions: For purposes of this chapter, these specific definitions apply:

Guenoc Valley Resort District: referred to herein as "GVD", refers to the district comprising of 16,000 acres within the Guenoc Valley Planned Development Area.

Market Driven Development: development, in terms of the construction timeline, that is driven by the market, sales of property, product, or amenities. After construction of utilities and essential roadway infrastructure, any future development will be dictated by the market and the rate of unit sales.

14.5 Plans required:

(a) A rezoning application shall be accompanied by a general plan of development for the entire parcel(s) unless the rezoning is publicly initiated and implements language included in an approved general or community plan.

(b) A use permit for Specific Plan of Development shall be required for the portion of the parcel(s) to be developed.

(c) General plans and use permits for Specific Plan of Development shall be approved prior to any development.

(d) Ministerial permits such as Building and Health Department permits shall not be issued prior to approval of a use permit or Specific Plan of Development where such conditional approval is required.

14.6 Application procedure for the Use Permit for a Specific Plan of Development: Shall follow the process as outlined in the "PDR" regulations, specifically Section 13.7.

14.6.1 Submittal requirements for development:

(a) An application for development in "GVD" must be accompanied by a Specific Plan of Development for the entire parcel(s) within that phase of development, and in addition include a Fire and Emergency Response Management Plan endorsed by the local fire management authority. The Specific Plan of Development shall be approved by

Use Permit pursuant to Section 21 Article 51 by the Planning Commission;

(b) Uses which are minor additions or alterations to existing uses or structures permitted by the Specific Plan of Development, limited to an increase of twenty (20) percent of the use area or gross floor area shall be subject to first obtaining a minor use permit. Uses which are additions or alterations to existing uses or structures permitted by the Specific Plan of Development greater than twenty (20) percent of the use area or gross floor area shall be subject to first obtaining a major use permit.

(c) Ministerial permits such as Building and Health Department permits shall not be issued prior to approval of use permit for the Specific Plan of Development.

14.6.2 **Uses Permitted**: The following uses are uses permitted within the "GVD" provided that such uses are not inconsistent with an approved General and Specific Plan of Development. Please see the Permitted Use Table.

(a) One (1) single family dwelling which shall be constructed according to the residential construction standards and of Section 10.20 residential accessory uses.

(b) Crop and tree farming and animal husbandry subject to the requirements of Section 9.16.

(c) Agricultural uses including accessory uses and structures, such as barns and stables.

(d) One (1) foster or small family home, family care home, supportive housing, transitional housing or small family care home not to exceed six (6) persons in addition to the resident family. (Ord. No. 3021, 12/16/2014)

(e) Rural recreation including but not limited to camping, hiking, biking horseback riding, all-wheel drive courses, fishing, and hunting for private commercial use.

(f) Temporary events meeting the standards outlined in Article 27.

14.6.3 **Uses Permitted with approval of a zoning permit**: Those uses permitted in the "CR", "PDC", and "PDR" district with a zoning permit as per Table A, Article 27.

14.6.4 Uses Permitted with approval of a General and Specific Plan of Development:

(a) All those uses permitted in the "SR", "R1", R2", "R3", "CR", "PDR", and "PDC".

(b) For projects with a minimum of one hundred (100) dwelling units, all those uses permitted in the "C1" and "C2" district'.

(c) For projects with a minimum of fifty (50) acres and two hundred (200) dwelling units, all those resort commercial uses permitted in the "CR" district.

(d) Recreation facilities, including but not limited to tennis courts, golf course, swimming centers, equestrian games and trails, fitness trails, indoor bowling alleys, all-wheel drive course, boat docks, marinas, playgrounds, and parks.

(e) Community facilities, defined as indoor or outdoor facilities, privately owned but open for public use, in which the chief function is the gathering of persons for entertainment or recreation, including art and culture, group assemblies, outdoor or indoor amplified music, wellness, fitness, social interaction, educational purposes, and may also include within such a community facility with compatible accessory uses such as wineries, restaurants, cafes, sports rental equipment and similar uses.

(f) In addition to the above uses refer to the Primary Uses Table below.

PRIMARY USES WITHIN THE GVD

USES	CHARACTERISTICS
Hotels Units**	Hotel units are attached or detached hotel rooms without kitchens and include normal uses and structures related to the operation of a hotel. The combination of hotel units are spread out between five Tentative Subdivision Maps. The hotel units are spread out between the following clusters: Maha Farm & Sales Center, Bohn Ridge, Trout Flat, Red Hill, Equestrian Center, the tented camping area, and the Entourage Hotel for staff. The total number of units, not to exceed 400 units.
Resort Residential Units**	Attached or detached units with kitchens; fractional or whole ownership intended for sale and subject to GVD Design/Development standards*. The total number of units not to exceed 450 units.
Residential Estate Villas*	Whole ownership units intended for sale and subject to GVD Design/Development standards*. The total number of units not to exceed 1400 units.

Workforce housing	Mixed unit types to accommodate essential employees for the various resorts and commercial uses. Work force housing units are defined as a minimum 400 square foot bedroom and bathroom unit with shared or independent cooking and resting areas, referenced as co- housing unit. Total number not to exceed 500 units.
Outdoor Entertainment	Includes but not limited to outdoor events such as sports events, conference centers, amphitheater, amplified music, etc.
Spa and Wellness Area	Offering wide range of health and beauty services and accompanying amenities such as gym & yoga rooms, restrooms/showers, food services, and treatment rooms.
Equestrian Area	Indoor and outdoor arena, stables, polo club, polo fields, clubhouse, spectator area.
Golf	Returning or non-returning course, clubhouses, storage and service areas, restrooms, café, and the potential to reconstruct the previous golf course.
Tented Camp	Includes semi-permanent tents for high end glamping opportunities and surrounding accessory uses such as outdoor recreational facilities such as but not limited to designated skeet shooting area, hunting, off road courses, fishing, etc.
Commercial & Retail	Includes but not limited to cafes, butcher shop, creamery, florist, fishmonger, art displays, bakery, newsagent or stand, post office, deli, wine store, restaurant(s), accessory retail stores, recording studio, car parking, public restrooms, open air markets, artisan workshops, gardens, pavilions, bowling, theater, educational facilities such as a culinary or farming school, etc.
Agricultural Production Facilities	Wineries, breweries, or distilleries to allow production supported by accessory facilities; two boutique wineries with tasting rooms and accessory uses including caves for barrel storage and commercial kitchens. Diversified agricultural production facilities included but not limited to herbal distillery, fruit dehydrations, jams and jellies production, creamery, aquaponics agriculture, tallow candles, flower arranging, and honey.

Accessory to Livestock and Farm Management	Includes but not limited to barns, equipment storage facilities, fencing, grazing corridors, showcasing areas for demonstrations, etc.
Support Facilities	Centralized shipping/receiving center, staff support services, centralized laundry facility, private entrance, staff parking, restrooms, maintenance and service areas, security, administrative support services and offices.
Fire Station and Emergency Response Center	Fire Station and First Responder center to serve as an Emergency Medical Professional (EMT) station, emergency command center, kitchen, restrooms, service rooms, on-site emergency response vehicle storage, and overnight staff and short term units.
Alternative Energy Production	Alternative energy production and distribution for solar, wind, and geothermal resources.
Float Plane Dock	Allowance for float plane landings, small welcome kiosk, and transportation/valet services.
Helipads	For medical emergencies there will be a heliport landing center to be located next to the emergency response center, additional locations for guest arrivals and departure will be located proximal to the float plane dock and dedicated welcome kiosk, or other designated locations.

*All short-term rentals under 30 days are subject to the payment of Transient Occupancy Tax (TOT).
** Units (Hotel, Resort Residential Units, Residential Estate Villas) are transferable as long as the total units do not exceed the total number of units proposed.

14.7 Performance standards, development standards and design guidelines required. All development and uses within the "GVD" shall be in accordance with approved development standards and design guidelines.

14.8 Performance Standards. All uses permitted by right within this district shall be subject to the performance standards set forth in Article 41.

(a) All uses permitted by use permit within this district shall be subject to the standards set forth in the General and Specific Plan of Development as approved by use permit. Exceptions or alternative standards requested the results must meet the standards as outlined in "PDC" Section 15.27: Alternative performance and development standards (a) - (c).

14.9 Development Standards.

(a) **Utilities & Infrastructure.** Ensure that adequate facilities, including water, sewer, and other facilities are or will be available to serve the proposed development, without effecting the existing public facilities serving surrounding developments.

(b) **Site Design.** A new building or accessory building should be compatible with its surrounding uses. All new construction should relate to the natural attributes of the site including the existing slope and should be positioned to respect existing mature trees and vegetation. The size, mass and height of a structure should be in proportion to the size of the property and should be similar to those nearby.

(i) **Lot size.** Minimum lot size shall be 10,000 square feet, exceptions may be granted in the event architectural concepts incorporate cluster development and yield the allowable density.

(ii) **Lot Coverage.** Site coverage will be in accordance with the approved Design Guidelines but in no case shall be more than fifty percent on parcels over 2 acres in size, except as otherwise provided in an approved plan or permit.

(iii) **Setbacks.** The setbacks are determined by the Specific Plan of Development, in the event there are no setbacks determined, the setback shall be the minimum requirements allowed by the current Fire Code and or the "R1" district.

(iv) **Height.** The maximum height in the "GVD" shall be 40 feet vertical distance measured from the vertical distance from the average level of the highest and lowest point of that portion of the lot covered by the building to the top most point of the roof. Exemptions to the height include architectural elements, mechanical equipment, and other exemptions as are deemed reasonable, necessary, and appropriate pursuant to Section 42.10.

(v) **Density.** Densities in the "GVD" shall not exceed five (5) dwelling units per acre, except where a density bonus is obtained pursuant to Article 27. Staff or temporary construction housing and accessory residences, as defined, shall not be included in the calculation of total dwelling units. Open space, both existing and proposed, that is located within the parcel(s) under consideration shall be included as open space when calculating the project's density. This allows for the adherence to low impact development principles with less disturbed natural resources.

(c) **Circulation & Parking.** A comprehensive vehicular and non-vehicular plan and access shall ensure that internal circulation systems are properly designed to serve the different types of proposed land uses. The circulation

plan along with the with fire and emergency response management plan shall be required to be included with the use permit for the specific plan.

- **Internal access.** All commercial planned development proposals shall ensure that internal circulation systems are properly designed to serve the different types of proposed land uses, accommodate expected traffic flows, provide adequate emergency access to all buildings and structures, and provide for safe and convenient pedestrian access, whether the project is partially or fully implemented.

- **External access.** The Planning Commission shall review development applications to ensure that projected traffic increases resulting from the project, when partially and fully implemented, will not significantly impact connecting streets, roads and existing and proposed land uses outside the project perimeter. The applicant shall propose measures acceptable to the County to reduce significant impacts to existing road networks or land uses outside the development itself.

- **Alternative Methods & Means.** A Minor Use Permit for alternative methods and means shall be requested for an exception to the circulation and parking standards.

Parking requirements. Refer to the table.

PARKING REQUIREMENTS

LAND USE	GVD PARKING RATIOS	NOTES
Residential		
Single-Family	2 spaces/ dwelling unit	Applies to Villa lots only.
Commercial		
Retail Store	<2,000 sf: 1 space / 400 sf >2,000 sf and <5,000 sf.: 1 space / 500 sf >5,000 sf.: 1 space / 650 sf	Assumes 50% of patrons are on site and 50% are from off site. Except when retail is exclusive use of the on-site patrons and / or accessory within another use.
Personal Service (barber, salon, etc.)	1 space / 2 treatment rooms	

Restaurant, Bar, Cocktail Lounge	1 space / 10 seats	
Hotel or similar use	1 space / 2.5 bedrooms, plus 2 for managers office	
Recreational		
Spectator Sport (theater, auditorium, sports arena, etc.)	1 space / 4 fixed seats	
Spa, Health Club, etc.	1 space / 1000 sf	
Public Swimming	1 space / 625 sfof pool area	
Golf Course	1 space / hole	
Commercial Stable	1 space / 5 stalls	
Agricultural		
Agricultural Assembly	1 space / 3,000 sf	
Public Services		
General	1 space / 250 sf	
Support Services		
Back of House, Fire Station, Sales Center, General Support Facilities, or similar uses.	1 space / 500 sf	

NOTES:

*ADA parking spaces shall be at a ratio of 1/40 parking spaces

*Bicycle parking spaces shall be provided at a ratio of 1/15 parking spaces

*or as superseded by California Building Code

All Parking Plans for the GVD shall be approved as part of the Specific Plan of Development (SPOD). When proposing alternative parking strategies, the applicant may submit a transportation/parking equivalency report to waive parking requirements as stated within this Zoning Ordinance. A parking waiver with a transportation demand management plan or alternative circulation plan, such as EV parking stalls that exceed the ratio, utilization of shuttle services, car shares, valet or concierge services, shall be accepted alternatives to these standards as long as accounted for within SPOD for the GVD.

(d) **Covenants, Conditions and Restrictions Required Elements**. The resort shall be subject to covenants, conditions and restrictions (CC&Rs). The Draft CC&R's shall be included for approval by the Planning Commission as part of the Specific Plan of Development approval. The Final CC&Rs shall be subject to the review and approval to form by the Community development Director and the County Attorney, prior to the opening of any unit purchase escrow.

(e) **Owners Association**. An owners association (OA) shall be established to govern the resort and to manage, maintain and operate the shared use areas and shared use facilities of the resort. The OA services shall include, but not be limited to, cleaning, repair and maintenance of all shared use areas and shared use facilities. The CC&Rs shall require that all exterior portions of the resort (including all primary and accessory units, with the exception of the winery, vineyards and pond), including, but not limited to, landscape areas, building exteriors, roadways, parking, recreational and other amenities and improvements shall be maintained and operated in accordance with luxury resort standards.

(f) **Other land uses.** Allow combining districts for agricultural preservation (AP) and resource conservation (RC).

14.10 Agricultural Preserve Combining District.

Purpose: To provide zoning for lands in agriculture preserve and for the conservation and protection of land capable of producing agricultural products. The following regulations shall apply in all "GVD-AP" districts.

Performance standards: All uses permitted within this district shall be subject to the performance standards set forth in Article 41.

Uses permitted:

(a) Agricultural uses, including crop and tree farming, livestock grazing, animal husbandry, apiaries, aviaries, except the uses indicated in Sections 4.4 and 4.5. (Ord. 1749, 7/7/1988)

(b) One (1) single-family dwelling or mobile home subject to Section 4.18 which shall be constructed according to the residential construction standards of Section 10.20.

(c) Agricultural and residential accessory uses and accessory structures.

Minimum lot size: Forty (40) acres.

14.11 Open Space Preserve Combining District.

Purpose: To provide a zoning overlay district to preserve, protect, and enhance private lands for their resource production potential and environmentally sensitive animal and plant habitat, while reducing land use conflicts by limiting uses incompatible with the purposes of this district.

The following regulations shall apply in all "GVD-O" districts.

Performance standards: All uses permitted in the "GVD-O" district shall be subject to the performance standards of Article 41. 24.4

Uses permitted:

(a) Agricultural uses, including native crop and tree farming and livestock grazing;

(b) Management of lands and forests for fuel reduction to reduce the risk of wildland forest fires;

(c) Passive recreation areas and game preserves.

14.12 Design Guidelines shall include the following and be approved along with the Specific Plan of Development.

(a) **Landscape**. The design guidelines shall have a section that governs the landscaping of streets, parks, agricultural, grazing corridors and open spaces, architectural design, signage, lighting, habitat protection measures, and any other requirements necessary to ensure an aesthetically pleasing and livable community consistent with the Specific Plan of Development.

(b) **Building.** The design guidelines shall have a section that governs the building materials, architectural styles, and massing.

14.13 Phasing of development: Phasing of development may be phased if approved as part of the General and/or Specific Plan of Development.

14.14 Adoption of Plans.

(a) Rezonings to "GVD" shall be noticed and heard simultaneously with the adoption of general plans of development. Decisions on the rezoning shall precede action on the general plan of development. Use permits for specific plans of development may be noticed and heard simultaneously with rezonings and general plans of development. Decisions on use permits for specific plans of development shall follow action on the general plan of development. (Ord. No. 1749, 7/7/1988)

(b) General plans of development shall be presented to the Planning

Commission for approval and shall be noticed in the same manner as provided for rezonings. The Commission shall act upon the plans within ninety (90) days from the date that the project's environmental document is certified unless said time period is extended by mutual consent between the Planning Commission and developer. The Planning Commission may approve, conditionally approve or disapprove the general plan of development, and shall promptly report that recommendation to the Board of Supervisors and to the developer.

(c) The general plans of development shall be noticed before the Board of Supervisors in the same manner as provided for rezonings. The Board shall schedule the general plan of development within sixty (60) days of the date of the Planning Commission recommendation. The Board shall act upon the recommendation of the Planning Commission within a reasonable time and may approve, disapprove or modify the general plan of development in any way deemed to be in the best interest of the peace, comfort, health, convenience and general welfare of the County and of the persons residing and working in the area, except that if any modification is recommended which was not previously considered by the Planning Commission, the proposed plans shall be referred back to the Planning Commission for report and recommendation. Failure by the Planning Commission to respond within forty (40) days shall be presumed to indicate concurrence with the Board of Supervisors' recommendations.

(d) Upon final approval by the Board of Supervisors of the general plan of development as presented or as modified, the plans shall be transmitted back to the Planning Commission together with a minute order stating the approval or any modifications finally determined by the Board of Supervisors. 13-15

(e) Upon approval of the general plan of development by the Board of Supervisors, a use permit for a Specific Plan of Development in conformity with the general plan of development may be presented to the Planning Commission for approval; or a use permit for a Specific Plan of Development may be presented concurrently with a General Plan of Development, provided that any approval by the Planning Commission be conditioned so that the use permit for the Specific Plan of Development shall be of no force or effect until approval of the General Plan of Development by the Board of Supervisors, nor until the effective date of any applicable rezoning to "GVD". The use permit for the specific plan shall be noticed, presented, considered and approved in the manner prescribed in Article 51. The Planning Commission may then approve, conditionally approve, disapprove or modify the use permit for the Specific Plan of Development in any manner deemed to be in the best interest of the peace, general welfare of the County and of the persons living or working in the area. (Ord. No. 1749, 7/7/1988) General Plans and use permits for Specific Plans of Development may be amended or extended in the same manner as they are adopted, provided, however, that no use permit for Specific of Development may be amended which also

requires an amendment to the sectional district map or General Plan of Development, until the sectional district map or General Plan are amended.

(f) All "GVD" rezoning, general plans of development, specific plans of development and use permits shall only be approved if found to be consistent with the Lake County General Plan.

14.15 Lapse of Approval: Approval deadline of the entitlements shall be dictated by either the Development Agreement of the Use Permit of the Specific Plan of Development.

APPENDIX IS

INITIAL STUDY

COUNTY OF LAKE
INITIAL STUDY ENVIRONMENTAL CHECKLIST FORM

1. Project title:	Guenoc Valley Mixed-Use Planned Development Project
2. Lead agency name and address:	County of Lake Community Development Department 255 N. Forbes Street Lakeport, CA 95453
3. Contact person and phone number:	Michalyn DelValle, Director Planning Division Phone: 707-263-2221 guenocvalleycomments@lakecountyca.gov
4. Project Sponsor's name and address:	Lotusland Investment Holdings, Inc. One Embarcadero Center Suite 730 San Francisco, CA 94111

5. Project location:

The Proposed Project consists of the development of a master planned mixed-use resort and residential community within the 16,000-acre Guenoc Valley Ranch property (Project Site) in southeast Lake County and off-site workforce co-housing on an approximately 12.75-acre property located in central Middletown (Off-Site Workforce Housing Site). The Project Site is comprised of 49 parcels totaling approximately 16,000 acres in southeast Lake County. The Project Site is generally bounded by Long Valley and Coyote Valley to the west, a U.S. Coast Guard LORAN station military reservation to the northwest, the Cedar Mountains to the north, and the Lake County border to the east. The Project Site is located approximately three miles east of State Route (SR) 29 and 13 miles west of SR 16. Access to the site is provided by SR 29 via Butts Canyon Road to the northwest. Butts Canyon Road bisects the southern portion of the Project Site. Additional location information for the Project Site and Off-Site Workforce Housing Site is provided below:

Project Address:	**Project Site:** 22000 Butts Canyon Road, California 95461 **Off-site Workforce Housing Site:** 21000 Santa Clara Road, California 95461
County:	Lake County
APNs:	**Project Site:** 013-015-28, -29; 013-016-04, -05, -06, -08; 013-019-05, -09; 013-021-05, -06, -09, -10; 013-022-01, -02, -05, -08, -09, -11, -12, -13, -15, -14; 013-023-06, -07, -09, -10, -11, -12, -13, -14, -15; 013-024-10, -12, -28, -29, -30, -33, -34; 013-053-01; 014-004-25; 014-310-06, -07, -08, -09; 014-320-06, -08; 014-330-08, -09; 014-340-04.

Off-site Workforce Housing Site: 014-380-09.

USGS Quad: **Project Site:** 7.5 Minute Quads: Middletown, Jericho Valley, Detert Reservoir, Aetna Springs. T10N R5W Sections: 5, 6, 7, 8, 18, and 19, T10N R6W Sections: Unsectioned Area (Guenoc Land Grant), 1, 2, 11, 12, 13, 14, 15, 22, and 24, T11N R5W Sections: 19, 28, 29, 30, 31, 32, and 33, T11N R6W Sections: 124, 25, 26, 35, and 36.
Off-site Workforce Housing Site: 7.5 Minute Quad: Middletown. T10N R6W and T11N R6W Unsectioned Area (Guenoc Land Grant).

Long./Lat.: **Project Site:** 38°44'41.0" N 122°29'06.2" W.
Off-site Workforce Housing Site: 38°45'23.00" N, 122°36'12.86" W

6. General plan designation: **Project Site:** Agriculture (A), Resource Conservation (RC), Rural Lands (RL), and Rural Residential (RR);
Off-site Workforce Housing Site: Low Density Residential (LDR)

7. Zoning: **Project Site:** Agriculture (A), Rural Lands (RL), and Rural Residential (RR)
Off-site Workforce Housing: Single Family Residential (R1).

8. Description of project:

Proposed Project components are described in the Notice of Preparation and summarized below. The Applicant has requested the following initial entitlements and approvals from the County associated with the Proposed Project, and additional approvals may ultimately be necessary:

- Amendment to the General Plan and Special Study Area map of the Middletown Area Plan to include the area commonly known as the college parcels (GPAP 18-01);
- Zoning Ordinance Amendment to introduce a new zoning district to allow for future uses, Guenoc Valley District ("GVD"), to implement the goals of the Special Study Area, and subsequently rezoning of the Project Site from Rural Lands, Agriculture, Rural Residential, and an Agricultural Protection Zone to GVD (AM 18-04; RZ 18-01);
- Use Permit for the Specific Plan of Development (Master Development Plan) for the first phase (UP 18-01);
- Tentative Subdivision Maps for the first phase (SD 18-01);
- General Plan of Development (GPD 18-01);
- Development Agreement (DA 18-01);
- Environmental Impact Report (EIR 18-01);
- Grading permit for Installation of water line; and
- Tentative Subdivision Map for off-site workforce housing.

Proposed land uses on the Project Site include a destination luxury resort, consisting of five hotels, resort residential uses, single family residential villas/estates, and recreational facilities, as well as commercial centers (i.e. the Farmstead Compound), modified agricultural production and grazing, and associated supporting infrastructure. Proposed outdoor recreational and resort amenities include two wineries, a wellness center and spa, golf course, equestrian facilities, polo grounds, and wilderness camp. At full

build out, the Proposed Project would include up to 400 hotel rooms, 450 resort residential units, 1,400 residential estates, and up to 500 workforce co-housing units. The project also includes the development of support facilities, including a centralized back of house facility, an emergency response center including a fire station, and water supply and wastewater treatment systems. Other undeveloped areas of the Project Site will also continue to be rural lands and will remain in managed grazing which is an integral part of the fire management plan being developed for the site along with an on-site fire station. The Proposed Project does not anticipate expansion of the existing vineyards within the Project Site.

Potable water supply would be provided to the Project Site via multiple deep water supply wells located throughout the Project Site and potentially on nearby properties owned by the Applicant. The Project Site may rely on an existing or new off-site site well located in the Collayomi Valley Aquifer located near the intersection of Butts Canyon and SR 29. In the event the water is used, a water line will be constructed from said property within the Public Utility Easement on Butts Canyon Road or overland within private easements to the Property Site. Wastewater would be collected via a sanitary sewer collection systems and treated on site. Treated wastewater would be distributed and reused on site primarily for landscaping and irrigation to reduce overall project water demand. Low impact development (LID) features are incorporated throughout the project design to provide for treatment, filtration, and retention of stormwater to prevent impacts to surface and groundwater supplies.

Project components on the Project Site would be developed in phases: The first phase would be constructed in the near-term (approximately the next ten years), while future phases would be built out based on market demands after the first phase is complete.

It is anticipated that the employees for the operation of the Proposed Project would primarily be from the local workforce. Due to the limited availability of rental homes and housing stock options near the Project Site, the Proposed Project includes a request to construct 50 housing structures capable of accommodating up to 200 workers on the Off-site Workforce Housing Site. A workforce housing unit is defined as a 400 square foot bedroom and bathroom per worker. Workforce housing is anticipated to be primarily co-living housing structures built-in single-family style residency with potential accessory dwelling units. The off-site workforce housing site is located within a floodplain and therefore may require a zoning change, general plan amendment, and a use permit for developing housing in the floodplain. This site had a previously approved but expired Tentative Map to allow 50 new houses and road and utility improvements, similar to what would be requested under the Proposed Project. Water and wastewater services would be provided through connection to existing municipal systems.

9. Surrounding land uses and setting:

The majority of the Project Site is bound by agricultural uses. Rural residential housing is immediately south and a U.S. Coast Guard LORAN station military reservation is immediately northwest. Upper Bohn Lake to the east is bisected by the Project Site boundary. The Off-site Workforce Housing Site is bound to the south, east, and west by residential and to the north by agricultural uses.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement).

Other approvals from regional and statewide agencies for the Project Proposed may include, but are not limited to:

- Army Corps of Engineers - Clean Water Act Section 404 Permit for fill of wetlands and/or waters of the U.S.
- United States Fish and Wildlife Service Consultation for potential impacts to federally listed species in accordance with the Federal Endangered Species Act
- State Historic Preservation Office – Consultation regarding impacts to historic properties in accordance with Section 106 of the Nation Historic Preservation Act
- Regional Water Quality Control Board – Central Valley Region – 401 Water Quality Certification, National Pollutant Discharge Elimination System (NPDES) discharge permit for stormwater and/or wastewater, and Master Reclamation Permit for Recycled Water
- California Department of Fish and Wildlife – Section 1600 Lake and Streambed Alteration Agreement and consultation related to potential impacts to state listed species and species of concern

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☒ Aesthetics	☒ Agriculture and Forestry Resources	☒ Air Quality
☒ Biological Resources	☒ Cultural Resources	☒ Energy
☒ Geology / Soils	☒ Greenhouse Gas Emissions	☒ Hazards & Hazardous Materials
☒ Hydrology / Water Quality	☒ Land Use / Planning	☐ Mineral Resources
☒ Noise	☒ Population / Housing	☒ Public Services
☒ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☒ Utilities / Service Systems	☒ Wildfire	☒ Mandatory Findings of Significance

DETERMINATION:

On behalf of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to the earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

For

EVALUATION OF ENVIRONMENTAL IMPACTS:

Pursuant to Section 15063 of the California Environmental Quality Act Guidelines, a brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the projects outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

I. AESTHETICS	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☒	☐	☐	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock croppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point).	☒	☐	☐	☐
d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?	☒	☐	☐	☐

Questions A, C, and D: The existing visual character of the Project Site can be described as generally undeveloped with views of rolling topography, grasslands, wooded areas, and agriculture. The Proposed Project would result in the development of residences, hotels, a winery, recreational amenities, and associated infrastructure within the Project Site. The primary roadway in the area is Butts Canyon Road which passes through the property. While the development would primarily occur on the interior of the Ranch and would not be visible from Butts Canyon Road, some development could be visible including traffic improvements which could have impacts to aesthetics in the area. Development within this area may alter the visual character of the site and create new sources of nighttime lighting and glare. Additionally, development of offsite improvements, including off-site worker housing in Middletown, could have aesthetic effects. These potential impacts will be addressed in the Aesthetics section of the EIR.

Question B: The Project Site is approximately 4 miles east of State Route 29, an eligible scenic highway[1], but is not visible from the roadway. The Off-Site Housing Site is located approximately 1,500 feet west of State Route 29, however, the 50 housing structures proposed would be similar to the residential land uses surrounding the site. Therefore, the Proposed Project does not have the potential to impact scenic resources within a state scenic highway. This issue will not be addressed in the EIR.

[1] Caltrans. California Scenic Highway Mapping System. Available online at: http://www.dot.ca.gov/hq/LandArch/16_livability/scenic_highways/. Accessed January 2018.

II. AGRICULTURAL RESOURCES	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the Project:				
a) Convert Prime farmland, Unique farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☒	☐	☐	☐
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☒	☐	☐	☐
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☒	☐	☐	☐
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☒	☐	☐	☐
e) Involve other changes in the existing environment, which due to their location or nature, could result in conversion of farmland, to non-agricultural use or conversion of forest land to non-forest use?	☒	☐	☐	☐

Questions A, B, and E: According to the California Department of Conservation's (CDC) Farmland Mapping and Monitoring Program (FMMP), the Project Site contains lands identified as Prime Farmland, Unique Farmland, Farmland of Local Importance, Grazing Land, Other Land, and Urban and Built-Up Land (CDC, 2016); additionally, portions of the Project Site are zoned for Agriculture (A). No land within the Project Site is under a Williamson Act Contract. The Proposed Project will retain most of the existing agricultural operations on the Project Site, including vineyard operations, and would include a grazing plan for future operations and fire management. The Off-site Workforce Housing Site contains lands identified as Farmland of Local Importance and Grazing Land (CDC, 2016), which would be converted to residential uses. A complete analysis of potential impacts to agricultural resources will be included in the Land Use and Agricultural Resources section of the EIR.

Questions C and D: The Project Site contains limited forest land as defined by Public Resources Code section 12220 (g), while the Off-site Workforce Housing Site does not. A complete analysis of potential impacts to forestry resources will be included in the Land Use and Agricultural Resources section of the EIR.

III. AIR QUALITY	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Where applicable, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?	☒	☐	☐	☐

Questions A-D: Development of the Proposed Project, including the off-site improvements and workforce housing, would result in short-term emissions of air pollutants and fugitive dust during the construction phase, and long-term emissions from operation associated primarily with vehicle traffic. The Lake County Air Basis (LCAB) is designated as unclassified or attainment for all national and State Ambient Air Quality Standards (NAAQS and CAAQS) for Criteria Air Pollutants (CAPs). A complete analysis of potential impacts to air quality will be included in the Air Quality section of the EIR.

IV. BIOLOGICAL RESOURCES	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☒	☐	☐	☐
b) Have a substantial adverse effect on any riparian habitat or sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☒	☐	☐	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☒	☐	☐	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native residents or migratory wildlife corridors or impede the use of native wildlife nursery sites?	☒	☐	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☒	☐	☐	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local regional, or state habitat conservation plan?	☒	☐	☐	☐

Questions A-D: The Project Site contains sensitive woodland, grove, thicket, and grassland habitats as well as emergent ponds, reservoirs, and streams. The Project Site provides habitat for multiple special status plant and animal species. While the Proposed Project has been designed to avoid or minimize impacts to known sensitive biological resources, construction of the Proposed Project will result in habitat loss, and potential impacts to wetlands, riparian areas, and wildlife corridors. The Off-site Workforce Housing Site includes a portion of Dry Creek and associated riparian habitat within the northwestern portion of the site, the remainder of which is primarily non-native grassland. A complete analysis of potential impacts to biological resources resulting from the Proposed Project, including off-site improvements, will be addressed in the Biological Resources section of the EIR.

Question E: Lake County has policies and guidelines to protect biological resources, including oak trees and setbacks for water courses and wetlands. Oak woodland, water courses, and wetlands occur throughout the Project Site. Potential conflicts between these policies and the Proposed Project, including off-site improvements, will be addressed in the Biological Resources section of the EIR.

Questions F: While there is no adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, habitat conservation plans which cover the property, the Water Resources Control Board, in approving the Surface Water Rights on the Ranch, required the creation of an Open Space Plan through the previous EIR done for the Guenoc Ranch Water Rights Modification Project[2]. The Proposed Project includes maintaining 2,675 acres of designated open space on the Project Site consistent with the existing Open Space Plan incorporated into the previous EIR Consistence with the Open Space Plan will be evaluated in the EIR.

V. CULTURAL RESOURCES	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☒	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☒	☐	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☒	☐	☐	☐

Questions A-C: A draft Historic Resources Study was prepared for the Project Site in April 2018 that identified several cultural resources within the Project Site. These resources are located in and out of the proposed development footprint. Cultural resources within the development footprint warrant additional investigation. An investigation of potential cultural resources within the Off-site Workforce Housing Site and off-site improvements area will be conducted. Additionally, construction of the Proposed Project, including the off-site improvements and workforce housing, could potentially uncover unknown cultural resources. Potential impacts to cultural resources will be addressed in the Cultural Resources section of the EIR.

[2] State Water Resources Control Board, Division of Water Rights. Final Environmental Impact Report for Guenoc Water Rights Modificaiton Project. Dated March 2009.

VI. ENERGY	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐

Questions A and B: Although the Proposed Project includes integrated energy efficiency strategies to reduce project energy demands and potentially will use solar to meet project demand, electricity will also be provided by Pacific Gas and Electric Company. Energy demands of the Proposed Project, including the proposed development on the Project Site and Off-site Workforce Housing Site, may result in significant impacts to energy resources. Potential impacts regarding energy will be addressed in the Energy section of the EIR.

VII. GEOLOGY & SOILS	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
▪ Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map as issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☒	☐	☐	☐
▪ Strong seismic ground shaking?	☒	☐	☐	☐
▪ Seismic-related ground failure, including liquefaction?	☒	☐	☐	☐
▪ Landslides?	☒	☐	☐	☐
b) Result in substantial soil erosion or the loss of topsoil?	☒	☐	☐	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☒	☐	☐	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☒	☐	☐	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?	☒	☐	☐	☐
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐

Questions A-E: The Project Site and Off-site Workforce Housing Site are located on the Hunting Creek-Berryessa fault system. Grading activities for the proposed resort and amenities, residential units, and infrastructure, as well as trenching and backfill for utilities placement would be required for development of the Proposed Project. Grading, trenching, backfill activities, and construction of retaining walls would

alter the topography on the Project site and may result in soil erosion impacts. Additionally, the Proposed Project could incorporate a gravel quarry for construction on the Project Site which may reduce truck traffic associated with hauling needed materials from off site. Potential impacts associated with seismic hazards, soil erosion, landslides, and expansive soils will be addressed within the Geology and Soils section of the EIR.

Question F: Unique paleontological or geologic features may be located within the Project Site and Off-site Workforce Housing Site and thus could be impacted by the project. Potential impacts to these resources will be addressed in the Geology and Soils section of the EIR.

VIII. GREENHOUSE GAS EMISSIONS	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

Questions A and B: Construction-related emissions of greenhouse gas (GHG) would result from fuel combustion for heavy-duty diesel and gasoline-powered equipment, portable auxiliary equipment, material delivery trucks, and worker commuter trips. Operational greenhouse gas (GHG) emissions would result from motor vehicle trips generated by the proposed land uses, on-site fuel combustion typical of commercial and residential uses, including space and water heating, landscape maintenance equipment, and fireplaces/stoves, and energy use.

The Proposed Project will incorporate a number of components that will reduce GHG emissions, including energy efficiency strategies, the use of renewable energy resources, and the establishment of onsite and nearby worker housing, which will reduce vehicle miles traveled. The CalEEMod program will be used to estimate GHG emissions from construction and operation of the Proposed Project, including the proposed development on the Project Site and Off-site Workforce Housing Site. The EIR will assess the Proposed Project's potential for impacts associated with GHG emissions in relation to applicable adopted plans, policies, and regulations.

IX. HAZARDS & HAZARDOUS MATERIALS	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☒	☐	☐	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐
c) Emit hazardous emissions or handles hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☒	☐	☐	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☒

Questions A, B, and D: The Project Site contains two cleanup sites listed on the California Water Board's GeoTracker website, including one active land disposal site and one closed leaking underground storage tank site. There are no cleanup sites listed on the Off-site Workforce Housing Site. However, there are six closed leaking underground storage tank sites within a one mile radius of the project site[3]. Both the Project Site and Off-Site Workforce Housing Site are within the planning area for the Westside Brownfields Coalition Assessment Project by the Westside Sacramento Integrated Regional Water Management Coordinating Committee[4]. An analysis of potential impacts associated with hazards and hazardous materials will be included in the Hazards and Hazardous Materials section of the EIR.

Question C: The Project Site is not within one-quarter mile of an existing or proposed school, but the Off-site Workforce Housing Site is. An analysis of potential impacts to schools from development of the Off-site Workforce housing Site will be included in the Hazards and Hazardous Materials section of the EIR.

Question E: The Mysterious Valley Airport is located approximately 2.75 miles east of the Project Site and 13.7 miles east of the Off-site Workforce Housing Site. The Proposed Project is not located within an airport land use plan or within two miles of a public airport; therefore, this issue will not be addressed in the EIR.

[3] GeoTracker. Available online at: https://geotracker.waterboards.ca.gov. Accessed January 2018.
[4] Westside Brownfields Coalition Assessment Project. Information Available online at http://www.westsideirwmbrownfields.org/. Accessed April 2019.

Question F: Lake County adopted an Emergency Operations Plan (EOP) in May 2018. The Proposed Project, including the off-site improvements, would not impair the implementation of this plan and would be developed consistent with any applicable policies contained therein; therefore, no impacts would occur. This issue will not be addressed further in the EIR.

Question G: The Project Site and Off-site Workforce Housing Site is classified as moderate, high, and very high fire hazard severity by the California Department of Forestry and Fire Protection Fire Hazard Severity Zone map[5]. A Fire Mitigation Plan is being prepared which will outline development standards, sustainable fire prevention techniques, and best practices for the protection and management of the landscape. An analysis of potential exposure of people or structures to a significant risk of loss, injury, or death involving wildland fires will be included in the Wildfire section of the EIR.

X. HYDROLOGY & WATER QUALITY	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☒	☐	☐	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☒	☐	☐	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious services, in a manner that would:				
▪ Result in substantial erosion or siltation on-or off-site	☒	☐	☐	☐
▪ Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site	☒	☐	☐	☐
▪ Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff	☒	☐	☐	☐
▪ Impede or redirect flood flows	☒	☐	☐	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☒	☐	☐	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☒	☐	☐	☐

Questions A, B, and C: Implementation of the Proposed Project would introduce impervious surfaces and alter the existing drainage pattern of the Project Site and Off-site Workforce Housing Site. Additionally, groundwater wells would be established and utilized to meet water supply demands; and on-site wastewater treatment systems would be utilized to treat and dispose of wastewater generated by the development on the Project Site. Therefore, construction activities and operation of the Proposed Project would have the potential to impact surface and ground water quality and supply. Potential impacts associated with hydrology and water quality will be analyzed within the Hydrology and Water Quality section of the EIR.

[5] Cal Fire, 2007. Fire Hazard Severity Zones in State Responsibility Areas. Available online at: http://frap.fire.ca.gov/webdata/maps/statewide/fhszs_map.pdf. Accessed January 2018.

Question D: The Project Site is classified as Zone D by the Federal Emergency Management Agency (FEMA) flood map, which indicates the Project Site has not been analyzed for flood hazard. The Off-site Workforce Housing Site is classified in some areas as Zone AE by the FEMA flood map, which indicates that the areas are subject to inundation by the 1 percent annual chance flood event[6]. The Project Site and Off-site Workforce Housing Site are not within a tsunami hazard zone; however, several bodies of water exist within the Project Site, which could be prone to seiche or mudflow. Potential impacts associated flood hazards, seiche, and mudflow will be analyzed in the Hydrology and Water Quality section of the EIR.

Question E: The Proposed Project, including the proposed development on the Project Site and Off-site Workforce Housing Site, has the potential to conflict with water quality control plans and sustainable ground water management plans. Potential impacts associated with these plans will be analyzed in the Hydrology and Water Quality section of the EIR.

XI. LAND USE & PLANNING	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐

Question A: The Proposed Project would not divide an established community because the Project Site is located on contiguous land owned wholly by the Applicant and no established communities exist immediately adjacent to the Project Site. The development of workforce housing on the Off-site Workforce Housing Site would not divide an established community because development on the site will be residential, which is consistent with the surrounding community. No further analysis is required.

Question B: The Proposed Project would amend the zoning designation and General Plan land use designations of the Project Site and potentially the Off-Site Workforce Housing Site. The EIR will evaluate the consistency of the Proposed Project with the adopted plans and policies of Lake County, including but not limited to the Middletown Area Plan, General Plan and Zoning Ordinance, and identify any physical environmental impacts that could result from inconsistencies with adopted plans and policies. The EIR will also analyze the project's compatibility with surrounding land uses. The physical change from an undeveloped parcel with natural scenic qualities to a resort/residential development would unavoidably alter the character of the Project Site and introduce potential land use compatibility conflicts with nearby residential uses. These impacts will be discussed in the Land Use and Agricultural Resources section of the EIR.

XII. MINERAL RESOURCES	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☒	☐
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Question A: According the U.S. Geological Survey (USGS) Mineral Resources Data System (MRDS), there are known mineral resources within the Project Site.[7] These resources include chromium, mercury, and manganese deposits, but none are identified as significant economic deposits or operations. Aggregate resources are described as important in the Middletown Area Plan. Construction aggregate will be used from job-specific borrow sites. However, some aggregate will be re-used from onsite earthmoving activities and thus will not result in the loss of availability of aggregate resources. In addition, the aggregate obtained from the borrow sites will prevent the need to bring in aggregate from other extraction sites in Middletown. Therefore, development of the Proposed Project would not result in a significant loss of availability of a known mineral resource that would be of value to the region and the residents of the state. This issue will not be addressed in the EIR.

Question B: The Project Site and the Off-site Workforce Housing Site are not located near any of the four potential aggregate sources identified by the Middletown Area Plan. The General Plan does not delineate mineral resource recovery sites. The Lake County Aggregate Resources Management Plan identifies areas where mining should be encouraged or prohibited. The plan specifies that miles 9.33 to 13.9 and miles 19.21 to 20.30 of Putah Creek should remain aggregate mining sites. Putah Creek crosses the Project Site approximately from Miles 3 to 6, so the site is located over three miles upstream of the delineated Putah Creek aggregate mining sites. The Off-site Workforce Housing Site is adjacent to Dry Creek. The Aggregate Resources Management Plan indicated that mining may occur in Dry Creek but did not encourage or prohibit it.[8] Therefore, development of the Proposed Project would not result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. This issue will not be addressed in the EIR.

[7] USGS, 2011. Mineral Resources Data System. Available online at: https://mrdata.usgs.gov/mrds/. Accessed January 2018.

XIII. NOISE	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b) Generation of excessive groundborne vibration noise levels?	☐	☐	☐	☒
c) For a project located within the vicinity of a private airstrip an airport land use plan or, where such a plan has not been adopted within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☒	☐	☐	☐

Questions A: Development of the Proposed Project, including the off-site workforce housing, would result in a short-term increase in noise during the construction phase and would result in long-term noise increases related to vehicle and air traffic, residential occupancy activities, and use of recreational facilities that may impact sensitive receptors. Additionally, the Proposed Project is asking for extended hours of construction and would introduce noise sensitive receptors on the Project Site and Off-site Workforce Housing Site. The EIR will evaluate the potential impacts on ambient noise levels from construction-related and operation-related noise.

Question B: While construction activities may generate vibration, these effects would be temporary and would not result in damage to nearby structures. The Proposed Project, including the off-site workforce housing, does not propose and land uses or activities that would result in excessive vibration levels. Therefore, effects associated with vibration would be less than significant and will not be addressed within the EIR.

Question C: The Project Site and Off-site Workforce Housing Site are not located near an airport or within an airport land use plan. The nearest airport is Mysterious Valley Airport, located approximately 2.75 miles east of the Project Site. The Proposed Project includes the development of a float plane dock for use by visitors. This may expose people residing and working in the project area to excessive noise levels. The noise impacts associated with operation of the float plane dock will be fully analyzed in the Noise section of the EIR.

XIV. POPULATION & HOUSING	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through the extension of roads or other infrastructure)?	☒	☐	☐	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Question A: The Proposed Project, including off-site workforce housing, would result in population growth to the area beyond what was anticipated in the Middletown Area Plan. Potential impacts will be addressed in the Population and Housing section of the EIR.

Question B: The Proposed Project, including off-site workforce housing, would not displace existing housing or substantial numbers of people and therefore would not necessitate the construction of replacement housing. No further analysis is required.

XV. PUBLIC SERVICES	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service rations, response time or other performance objectives for any of the public services:				
a) Fire protection?	☒	☐	☐	☐
b) Police Protection?	☒	☐	☐	☐
c) Schools?	☒	☐	☐	☐
d) Parks?	☒	☐	☐	☐
e) Other public facilities?	☒	☐	☐	☐

Question A-E: The Proposed Project, including off-site workforce housing, would lead to an increase in the population of the project area, which would result in increased demand for public services, including law enforcement, fire protection, schools, and parks. These impacts will be addressed in the Public Services section of the EIR.

XVI. RECREATION	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☒	☐	☐	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	☒	☐	☐	☐

Questions A-B: The increase in population as a result of the Proposed Project, including off-site workforce housing, may result in increased use of existing recreational facilities. These impacts will be addressed in the Public Services section of the EIR.

XVII. TRANSPORTATION	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☒	☐	☐	☐
b) Would the project conflict of be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☒	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐
d) Result in inadequate emergency access?	☒	☐	☐	☐

Questions A - D: The Proposed Project, including off-site workforce housing, would introduce additional traffic on roadways and intersections in the project area. The primary roadways providing access to the Project Site and Off-site Workforce Housing Site are SR 29, Highway 175, and Butts Canyon Road. Development of the Proposed Project has the potential to conflict with policies addressing the circulation system and CEQA Guidelines section 15064.3(b). The Proposed Project may also increase hazards and result in inadequate emergency access. Impacts associated with transportation will be addressed in the Transportation section of the EIR. The EIR will address potential impacts to surrounding roadways resulting from the increase in motor vehicle traffic along roadways during construction (short-term, temporary increase) and operations (long-term increase from resort amenities and residences) in relation to County General Plan policies related to level of service standards. Additionally, the Proposed Project's impacts associated with overall vehicle miles traveled (VMT) will be assessed. A Traffic Impact Analysis (TIA) will be prepared for the Proposed Project to determine the potential for adverse effects on traffic circulation, overall vehicle miles traveled, and level of service, and identify appropriate traffic improvements and mitigation measures. The EIR will also evaluate whether construction of the proposed roadways and access intersections would result in any safety impacts based on compliance with County design standards. The EIR will also consider emergency access, pedestrian and bicycle access, and alternative transportation.

XVIII. TRIBAL CULTURAL RESOURCES	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	☒	☐	☐	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐

Questions A-B: The Proposed Project, including off-site workforce housing, could potentially adversely affect tribal cultural resources. The County is initiating contact with Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the project area pursuant to the statutory requirements of Senate Bill 18 (SB 18), Assembly Bill 52 (AB 52) (Chapter 532, Statutes of 2014), and Section 21080.3.1 of the California Public Resources Code (PRC). The results of the consultation and any potential impacts will be addressed in the Cultural Resources section of the EIR.

XIX. UTILITIES & SERVICE SYSTEMS	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☒	☐	☐	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☒	☐	☐	☐
c) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☒	☐	☐	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☒	☐	☐	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.	☒	☐	☐	☐

Questions A and **B:** The Proposed Project would require the extension of electrical infrastructure to the Project Site, construction of new utility systems within the Project Site, and potential construction of offsite improvements related to water supply. The development of proposed off-site workforce housing would

involve connections to existing municipal service systems. The EIR will evaluate potential impacts related to provision of all utility services to the Project Site and Off-site Workforce Housing Site. Utility service providers will be contacted to determine if providers have the capacity to serve the Project and to assess potential impacts to providers associated with development of the Proposed Project. The availability of water supply to meet the needs of the Proposed Project will be assessed and a Water Supply Assessment will be prepared in accordance with SB 610. The EIR will evaluate potential impacts associated with construction of any necessary utility improvements.

Question C: The proposed development on the Project Site would utilize septic systems and package treatment plants for treatment of wastewater. Additionally, the temporary construction workforce camp would utilize holding tanks for waste water which would then be trucked to outside water treatment facilities. The Off-Site Housing Site would utilize existing wastewater systems of the community of Middletown. Impacts associated with wastewater systems will be addressed in the Utilities and Service Systems section of the EIR.

Questions D and E: The Proposed Project would implement on-site reduction of solid waste through recycling and composting. Separate refuse collection bins for recyclable waste, compostable waste, and standard waste would be provided. Compostable materials would be disposed of within the Project Site. Refuse would be taken to Eastlake Landfill. Development of both the Project Site and Off-site Workforce Housing Site has the potential to result in impacts from the increased demands related to solid waste disposal. These impacts will be addressed in the Utilities and Service Systems section of the EIR.

XX. WILDFIRE	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
If located in or near state responsibility areas of lands classified as very high fire hazard severity zones, would the project?				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?	☒	☐	☐	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☒	☐	☐	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☒	☐	☐	☐

Question A: Lake County adopted an Emergency Operations Plan (EOP) in May 2018[9] and a Local Hazard Mitigation Plan Update in February 2018[10]. The Proposed Project, including off-site workforce

[9] Lake County Emergency Operations Plan Dated May 1, 2018. Available online: http://www.lakesheriff.com/Assets/Sheriff+Site/OES/Updated+Emergency+Operations+Plan.pdf

[10] Lake County Local Hazard Mitigation Plan Update Dated February 2018. Available online: http://www.lakesheriff.com/Assets/Sheriff+Site/OES/2018+Natural+Hazard+Mitigation+Plan.pdf

housing, would not impair the implementation of these plans and would be developed consistent with any applicable policies contained therein; therefore, no impacts would occur. This issue will not be addressed further in the EIR.

Questions B-D: The Project Site is classified as moderate, high, and very high fire hazard severity by the California Department of Forestry and Fire Protection Fire Hazard Severity Zone map. The Off-site Workforce Housing Site is classified as moderate fire hazard severity[11] The Proposed Project has the potential to increase risk of wildfire and require the installation of infrastructure wildfire prevention infrastructure that could have an impact to the environment. A Fire Mitigation Plan is being prepared which will outline development standards, sustainable fire prevention techniques, and best practices for the protection and management of the landscape. Potential impacts related to wildfire will be addressed in the Wildfire section of the EIR.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE	Impact to be Addressed in the EIR	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the substantially potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probably future projects)?	☒	☐	☐	☐
c) Does the project have environment effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

Questions A-C: The Proposed Project could potentially degrade the quality of the environment, could generate impacts that may be cumulatively considerable, and may have a substantial effect on human beings. These issues will be addressed in the EIR.

APPENDIX NOISE

TRAFFIC NOISE MEMORANDUM

December 3, 2019

Ryan Lee Sawyer
AES
1801 7th Street, Ste 100
Sacramento, CA 95811
rsawyer@analyticalcorp.com

Subject: Traffic Noise Increases – Maha Resort Project – Lake County, CA

Dear Ms. Sawyer:

Saxelby Acoustics has prepared an analysis of traffic noise increases on project-area roadway segments. The intent of this analysis is to provide an assessment of the day/night (L_{dn}) noise level along these segments for comparison to the standards of Lake County and CEQA.

Significance Criteria

CEQA does not define a threshold of "substantial increase" regarding noise exposure. Generally, a noise impact may be considered significant if it would generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance. Lake County Table 8-1 of the General Plan Noise Element establishes a normally acceptable exterior noise level standard of 55 dBA Ldn. Therefore, any increase in traffic which causes noise levels at a sensitive receptor to exceed 55 dBA Ldn, would be significant. Where noise levels already exceed 55 dBA Ldn, a determination of significance is based upon the magnitude of the increase.

The potential increase in traffic noise from the project is a factor in determining significance. Research into the human perception of changes in sound level indicates the following:

- A 3-dB change is barely perceptible,
- A 5-dB change is clearly perceptible, and
- A 10-dB change is perceived as being twice or half as loud.

A limitation of using a single noise level increase value to evaluate noise impacts is that it fails to account for pre-project-noise conditions. **Table 1** is based upon recommendations made by the Federal Interagency Committee on Noise (FICON) to provide guidance in the assessment of changes in ambient noise levels resulting from aircraft operations. The recommendations are based upon studies that relate aircraft noise levels to the percentage of persons highly annoyed by the noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, it has been accepted that they are applicable to all sources of noise described in terms of cumulative noise exposure metrics such as the L_{dn}.

TABLE 1: SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE

Ambient Noise Level Without Project, L_{dn}	Increase Required for Significant Impact
<60 dB	+5.0 dB or more
60-65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more
Source: Federal Interagency Committee on Noise (FICON)	

Based on the **Table 1** data, an increase in the traffic noise level of 3.0 dB or more would be significant where the pre-project noise levels are within 60-65 dB L_{dn}. Extending this concept to higher noise levels, an increase in the traffic noise level of 1.5 dB or more may be significant where the pre-project traffic noise level exceeds 65 dB L_{dn}. The rationale for the **Table 1** criteria is that, as ambient noise levels increase, a smaller increase in noise resulting from a project is sufficient to cause annoyance.

Off-Site Traffic Noise Prediction Methodology

To predict noise levels due to traffic, the Federal Highway Administration's Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used. The model is used in conjunction with the Calveno reference noise emission curves, and accounts for vehicle volume and speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the project site. The FHWA Model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To calculate L_{dn}, average daily traffic (ADT) volume data is adjusted based on the assumed day/night distribution of traffic on the project roadways.

Traffic volumes for existing, baseline, and cumulative conditions without the project were obtained from the project traffic study the form of peak hour intersection movements. The peak hour traffic volumes were compiled into segment volumes and converted into daily traffic volumes using a multiplication factor of 6.7, based upon estimates from the project traffic engineer. Daily project trips were assumed to be five times the peak hour trips, also based upon estimates from the project traffic engineer. Truck usage and vehicle speeds on the local area roadways were estimated from field observations and Caltrans data, where available.

Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each project-area roadway segment. This analysis includes assessment of existing, baseline, and cumulative traffic conditions with, and without, the project.

Table 2 summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area under existing conditions with and without the project. **Table 3** summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area under baseline conditions with and without the project. **Table 4** summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area under cumulative conditions with and without the project. **Table 5** summarizes the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area under cumulative conditions with and without the Phase 2 project.

Appendix A provides the complete inputs and results of the FHWA traffic modeling.

TABLE 2: PREDICTED TRAFFIC NOISE LEVELS (EXISTING CONDITIONS WITH AND WITHOUT THE PROJECT)

Roadway	Segment	Existing	Existing + Project	Change	Significance Threshold	Significant increase?
		dBA L_{dn}	dBA L_{dn}	dBA L_{dn}		
SR 53	North of SR 29	64.0	64.3	0.3	+3.0 dB	No
SR 29	SR 53 to N. Spruce Grove	63.4	64.1	0.7	+3.0 dB	No
SR 29	N. Spruce Grove to S. Spruce Grove	63.2	63.9	0.7	+3.0 dB	No
SR 29	S. Spruce Grove to Hidden Valley	59.1	59.8	0.7	+5.0 dB	No
SR 29	Hidden Valley to Hartmann	59.1	59.9	0.8	+5.0 dB	No
SR 29	Hartmann to Grange	55.3	55.9	0.6	+5.0 dB	No
SR 29	Grange to Butts Canyon	59.8	60.4	0.6	+5.0 dB	No
SR 29	Butts Canyon to Wardlaw	62.3	62.8	0.5	+3.0 dB	No
SR 29	Wardlaw to Young	60.5	61.0	0.5	+3.0 dB	No
SR 29	Young to Main	62.7	63.2	0.5	+3.0 dB	No
SR 29	Maint to Armstrong	62.4	62.8	0.3	+3.0 dB	No
SR 29	Armstrong to Douglas	62.4	62.8	0.3	+3.0 dB	No
SR 29	Douglas to Callayomi	62.3	62.6	0.3	+3.0 dB	No
SR 29	Callayomi to Lake	65.9	66.3	0.4	+1.5 dB	No
SR 29	Lake to Central Park	59.9	60.2	0.3	+5.0 dB	No
SR 29	South of Central Park	64.5	64.8	0.3	+3.0 dB	No
SR 29	West of SR 53	62.8	63.0	0.2	+3.0 dB	No
Morgan Valley Road	East of SR 53	60.0	60.2	0.2	+3.0 dB	No
N. Spruce Valley Road	East of SR 53	50.6	50.8	0.2	+5.0 dB or > 55 dB	No
S. Spruce Valley Road	East of SR 53	57.1	57.3	0.2	+5.0 dB	No
Hidden Valley Road	East of SR 53	52.9	53.4	0.5	+5.0 dB or > 55 dB	No
Hartmann Road	East of SR 53	56.4	56.4	0.0	+5.0 dB	No
Grange Road	East of SR 53	44.5	44.5	0.0	+5.0 dB or > 55 dB	No
Butts Canyon Road	**SR 29 to Black Oak Hill**	**54.1**	**58.5**	**4.4**	**+5.0 dB or > 55 dB**	**Yes**

Butts Canyon Road	Black Oak Hill to Oat Hill	55.4	59.7	4.3	+5.0 dB	No
Butts Canyon Road	East of Oat Hill	45.6	50.4	4.8	+5.0 dB or > 55 dB	No
SR 175	SR 29 to Santa Clara	58.5	59.2	0.7	+5.0 dB	No
SR 175	West of Santa Clara	61.3	61.9	0.6	+3.0 dB	No
Pope Valley Road	West of Howell Mountain	51.0	52.1	1.1	+5.0 dB or > 55 dB	No
Tubbs Road	South of SR 29	53.5	53.7	0.2	+5.0 dB or > 55 dB	No
Tubbs Road	North of SR 128	59.7	59.8	0.1	+5.0 dB	No

Notes:

1 Where existing noise levels are less than 60 dB an increase of 5 dB would be a significant increase. Additionally, any increase causing noise levels to exceed the County's Normally Acceptable 55 dB Ldn noise level standard at an existing outdoor activity area of a residential use would also be significant. Where existing noise levels exceed 60 dB but are less than 65 dB, an increase of 3 dB or more would be significant. Where existing noise levels exceed 65 dB, an increase of 1.5 dB or more would be significant.

TABLE 3: PREDICTED TRAFFIC NOISE LEVELS (BASELINE CONDITIONS WITH AND WITHOUT THE PROJECT)

Roadway	Segment	Baseline	Baseline + Project	Change	Significance Threshold	Significant increase?
		dBA L_{dn}	dBA L_{dn}	dBA L_{dn}		
SR 53	North of SR 29	64.6	64.9	0.3	+3.0 dB	No
SR 29	SR 53 to N. Spruce Grove	64.8	65.3	0.5	+3.0 dB	No
SR 29	N. Spruce Grove to S. Spruce Grove	64.7	65.2	0.5	+3.0 dB	No
SR 29	S. Spruce Grove to Hidden Valley	60.5	61.0	0.5	+3.0 dB	No
SR 29	Hidden Valley to Hartmann	60.7	61.3	0.6	+3.0 dB	No
SR 29	Hartmann to Grange	56.6	57.1	0.5	+5.0 dB	No
SR 29	Grange to Butts Canyon	61.1	61.6	0.5	+3.0 dB	No
SR 29	Butts Canyon to Wardlaw	63.3	63.7	0.4	+3.0 dB	No
SR 29	Wardlaw to Young	61.5	61.9	0.4	+3.0 dB	No
SR 29	Young to Main	63.7	64.1	0.4	+3.0 dB	No
SR 29	Maint to Armstrong	63.1	63.4	0.3	+3.0 dB	No
SR 29	Armstrong to Douglas	63.1	63.4	0.3	+3.0 dB	No
SR 29	Douglas to Callayomi	63.0	63.3	0.3	+3.0 dB	No
SR 29	Callayomi to Lake	66.6	66.9	0.3	+1.5 dB	No
SR 29	Lake to Central Park	60.6	60.9	0.3	+3.0 dB	No

SR 29	South of Central Park	65.2	65.5	0.3	+1.5 dB	No
SR 29	West of SR 53	63.4	63.6	0.2	+3.0 dB	No
Morgan Valley Road	East of SR 53	60.5	60.6	0.1	+3.0 dB	No
N. Spruce Valley Road	East of SR 53	51.1	51.3	0.2	+5.0 dB or > 55 dB	No
S. Spruce Valley Road	East of SR 53	57.5	57.6	0.1	+5.0 dB	No
Hidden Valley Road	East of SR 53	59.0	59.2	0.2	+5.0 dB	No
Hartmann Road	East of SR 53	56.6	56.6	0.0	+5.0 dB	No
Grange Road	East of SR 53	44.5	44.5	0.0	+5.0 dB or > 55 dB	No
Butts Canyon Road	SR 29 to Black Oak Hill	55.7	59.2	3.5	+5.0 dB	No
Butts Canyon Road	Black Oak Hill to Oat Hill	57.0	60.4	3.4	+5.0 dB	No
Butts Canyon Road	East of Oat Hill	47.4	51.1	3.7	+5.0 dB or > 55 dB	No
SR 175	SR 29 to Santa Clara	59.8	60.3	0.5	+5.0 dB	No
SR 175	West of Santa Clara	63.0	63.5	0.5	+3.0 dB	No
Pope Valley Road	West of Howell Mountain	53.0	53.7	0.7	+5.0 dB or > 55 dB	No
Tubbs Road	South of SR 29	54.0	54.2	0.2	+5.0 dB or > 55 dB	No
Tubbs Road	North of SR 128	60.0	60.1	0.1	+3.0 dB	No

Notes:
1 Where existing noise levels are less than 60 dB an increase of 5 dB would be a significant increase. Additionally, any increase causing noise levels to exceed the County's Normally Acceptable 55 dB Ldn noise level standard at an existing outdoor activity area of a residential use would also be significant. Where existing noise levels exceed 60 dB but are less than 65 dB, an increase of 3 dB or more would be significant. Where existing noise levels exceed 65 dB, an increase of 1.5 dB or more would be significant.

Tubbs Road	North of SR 128	60.5	60.8	0.3	+3.0 dB	No

Notes:

1 Where existing noise levels are less than 60 dB an increase of 5 dB would be a significant increase. Additionally, any increase causing noise levels to exceed the County's Normally Acceptable 55 dB Ldn noise level standard at an existing outdoor activity area of a residential use would also be significant. Where existing noise levels exceed 60 dB but are less than 65 dB, an increase of 3 dB or more would be significant. Where existing noise levels exceed 65 dB, an increase of 1.5 dB or more would be significant.

Conclusions

Based upon the predicted traffic noise increases shown in **Tables 2-5**, the proposed project is predicted to cause increased traffic noise which would exceed the impact thresholds along Butts Canyon Road. Increases along Butts Canyon Road are predicted to be in the range of 4.4-6.2 dBA. In order to reduce this impact, the use of sound walls or quiet pavement would be required. However, sound walls are unlikely to be a practical noise control measure considering that driveway openings would be required for vehicle access. Quiet pavements are typically assumed to provide a 3-5 dBA reduction. Assuming an average 4 dBA reduction, quiet pavement placed along sensitive receptor areas could reduce project noise level increases to 0.4-2.2 dBA. This would reduce traffic noise increases to less than significant.

No other exceedances of the Lake County significant increase thresholds are predicted for any other segments or project alternatives.

Please call or email me if you have any questions regarding this analysis.

Sincerely,

Saxelby Acoustics LLC

Luke Saxelby, INCE Bd. Cert.

APPENDIX NOP

NOP COMMENT LETTERS

California
Department of Conservation
Division of Land Resource Protection

Gavin Newsom, Governor
David Bunn, Director

May 8, 2019

VIA EMAIL: GUENOCVALLEYCOMMENTS@LAKECOUNTYCA.GOV
Ms. Michalyn DelValle
Community Development Director
255 N. Forbes Street
Lakeport, CA 95453

Dear Ms. DelValle:

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE GUENOC VALLEY MIXED-USE PLANNED DEVELOPMENT PROJECT,

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Guenoc Valley Mixed-Use Planned Development Project. The Division monitors farmland conversion on a statewide basis and administers the Williamson Act and other agricultural land conservation programs. We offer the following comments and recommendations with respect to the proposed project's potential impacts on agricultural land and resources.

Project Description

The proposed project consists of the development of a master planned mixed-use resort community within the 16,000-acre Guenoc Valley Ranch property in southeast Lake County. Proposed land uses include a destination luxury resort, consisting of five hotels, resort residential units, single family residential villas/estates and recreational facilities, as well as commercial centers (i.e. the Farmstead Compound), modified agricultural production, and associated supporting infrastructure. Proposed outdoor recreational and resort amenities include two wineries, a wellness center and spa, golf course, equestrian facilities, polo grounds, and wilderness camp.

Other undeveloped areas of the project site will continue to be rural lands and will remain in managed grazing which is an integral part of the fire management plan being developed for the site along with an on-site fire station. Project components would be developed over multiple phases. The first phase would be constructed in the near-term (approximately the next ten years) and would be analyzed in the Draft EIR at a project level. Future phases will be built out based on market demands and the Draft EIR will analyze these on a programmatic level.

Department Comments

The Department recommends the following discussion under the Agricultural Resources section of the Environmental Impact Report:

- Type, amount, and location of farmland conversion resulting directly and indirectly from implementation of the proposed project.
- Impacts on any current and future agricultural operations in the vicinity; e.g., land-use conflicts, increases in land values and taxes, loss of agricultural support infrastructure such as processing facilities, etc.
- Incremental impacts leading to cumulative impacts on agricultural land. This would include impacts from the proposed project, as well as impacts from past, current, and likely future projects.
- Proposed mitigation measure for all impacted agricultural lands within the proposed project area.

Although direct conversion of agricultural land is often an unavoidable impact under CEQA analysis, mitigation measures must be considered. In some cases, the argument is made that mitigation cannot reduce impacts to below the level of significance because agricultural land will still be converted by the project, and therefore, mitigation is not required. However, reduction to a level below significance is not a criterion for mitigation under CEQA. Rather, the criterion is feasible mitigation that lessens a project's impacts.

All mitigation measures that are potentially feasible should be considered. A measure brought to the attention of the Lead Agency should not be left out unless it is infeasible based on its elements. The Department suggests that the County consider the adoption of an agricultural land mitigation program that will effectively mitigate the conversion of agricultural land.

Agricultural Mitigation Program

Agricultural conservation easements are an available mitigation tool that the County should consider. The Department highlights easements as a mitigation tool because of their acceptance and use by lead agencies as an appropriate mitigation measure under CEQA and because they follow an established rationale similar to that of wildlife habitat mitigation.

Programs that establish agricultural conservation easements and in-lieu fees for mitigation banking are most effective at conserving comparable quality agricultural land when the easement requirements or fees are determined concurrent with project approval. Should significant time elapse between initial approval and the applicant's receipt of a building or grading permit, conflict may arise over the agricultural quality or value of the land being converted.

Mitigation via agricultural conservation easements can be implemented by at least two alternative approaches: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose

includes the acquisition and stewardship of agricultural conservation easements. The conversion of agricultural land should be deemed an impact of at least regional significance. Hence, the search for replacement lands should not be limited strictly to lands within the project's surrounding area.

A source that has proven helpful for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

http://www.calandtrusts.org/resources/conserving-californias-harvest/

Another source is the Division's California Farmland Conservancy Program (CFCP), which has participated in bringing about conservation easements throughout the State of California involving many California land trusts. Any other feasible mitigation measures should also be considered.

Conclusion

Thank you for giving us the opportunity to comment on the Notice of Preparation of a Draft Environmental Impact Report for the Guenoc Valley Mixed-Use Planned Development Project. Please provide this Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Environmental Planner at (916) 324-7347 or via email at Farl.Grundy@conservation.ca.gov.

Sincerely,

Monique Wilber

Importance: High

Mr. Roberts,

This project topic was placed on the agenda for the May 9, 2019 regular board meeting of the Callayomi County Water District (CCWD) for discussion. The CCWD has no comments on the proposed project on "Section 1 the Guenoc Valley Site". However, we do have comments on section "2.2 Proposed off-site workforce housing site located in Middletown" and all sections associated with Section 2.2.

- Throughout the document there are references to unnamed new water sources. The CCWD is opposed to any new public drinking water wells that may affect the CCWD current and future water sources.

- The State Water Resources Control Board, Drinking Water Division (DDW) oversees all public water systems in California. What is being proposed are new public water systems. The DDW has been promoting public drinking water systems throughout the state to consolidate when possible. The offsite workforce housing site in Middletown would be considered a public water system based on the number of homes/people served. Since this newly proposed public water system is located next to an existing public water system, it is unlikely that this new system would secure the DDW permit required by law to be a public water system. The DDW will most likely recommend that the proposed off-site workforce housing site located in Middletown approach the CCWD regarding connecting to the CCWD public water system.

Assuming that the CCWD would be approached regarding this project, the entity would be required to meet certain requirements.

- The Local Agency Formation Commission (LAFCO) is tasked with ensuring that public entities adhere to state laws regarding municipality expansion. The CCWD would require this "subdivision" to be annexed into the District, at the cost of the developer.

- The CCWD would need to provide the developer with a "Will Serve Letter". This would required that all water system components (pipes, valves, hydrants etc.) installed by the developer meet CCWD standard. It would also

need to be determined if the impact on the CCWD system capacity were impacted by the CCWD engineer. If the capacity impact is determined to be substantial, we could require improvements to our water supply system.

Regards,

John Hamner
General Manager
Callayomi County Water District

Good Afternoon Agencies,

This email is in regards to the Notice of Preparation of an Environmental Impact Report (EIR) for the proposed Guenoc Valley Mixed Use-Planned Development. The above attachment is a detailed Notice of Preparation Packet regarding the proposed use for you to review and provide the necessary comments. Please keep in mind, the commenting period is from April 23, 2019 through May 23, 2019. If you have any questions, please let me know.

Sincerely,

Mark Roberts – Senior Planner

RE: **GUENOC VALLEY MIXED-USE PLANNED DEVELOPMENT**
Response to Notice of Preparation

Dear Ms. DelValle:

Thank you for the opportunity to comment on the Notice of Preparation (NOP) for the Environmental Impact Report (EIR) that will be prepared for the Guenoc Valley Mixed-Use Development in southern Lake County. A substantial portion of the project's southeastern boundary is the Lake/Napa County border. The applicant's property holdings also extend into Napa County beyond the project boundary shown in the NOP's site plan. It is unclear from the materials included in the NOP whether any of the existing legal lots lying on the Lake/Napa border span both counties, and whether any of the proposed development will occur within Napa County. Napa County requests additional detail on the scope of the project in order for Napa County to determine our extent of jurisdiction over the project:

1. Please either upload all current application materials to the project's webpage or mail a complete copy, including the proposed tentative map, planned development plans, and civil plans including proposed grading, drainage, and utility improvements including water and sewage systems.

2. Please provide groundwater well locations as noted on pages 10 and 13 of the NOP.

3. Please provide the location and extent of any road/circulation network improvements that may be proposed within Napa County.

4. Please provide the location and extent of any power grid improvements, including the location of alternative energy production facilities noted on page 7 of the NOP such as the off-site solar generate project.

Napa County requests the following items be addressed within the Draft EIR:

1. Project Description

a. General Plan Amendment – Detail the extent of proposed policy and exhibit/map amendments to the Lake County General Plan.
b. The EIR project description and exhibits should identify all improvements and subdivision boundaries occurring within Napa County, and/or describe the degree of setbacks proposed from the Napa County boundary.
c. Off-site Improvements – Provide details on the extent of all off-site improvements that may occur within Napa County.
d. Upper Bohn Reservoir Improvements and Uses – Approximately half of Upper Bohn Reservoir lies within Napa County. Pages 7 and 8 of the NOP project description note several improvements and resort uses intended for the water body. The EIR project description should described the extent of improvements and recreation activities intended to occur within Napa County.
e. Water/Wastewater Systems Improvements – There are several vineyard tracts within Napa County that are owned by the project applicant, and which are generally adjacent to the proposed project. The NOP project description notes that potable water, irrigation water, recycled water, and wastewater systems will be extended throughout the project site. The EIR project description should describe the extent of water and wastewater improvements proposed within Napa County, or if no improvements will occur within Napa County, describe the design features that preclude connectivity with the applicant's Napa County developments.

2. Air Quality – Air Quality modeling and analysis should evaluate changes to air quality within Napa County. Napa County lies within the Bay Area Air Quality Management District (BAAQMD), so the EIR should considered BAAQMD thresholds in addition to Lake County Air Quality Management District Thresholds.

3. Biological Resources – The EIR should consider the project's potential to impact biological resources within Napa County. Napa County's Conservation Regulations (Napa County Code Chapter 18.108) will apply to any improvements or land uses occurring within Napa County. For example, improvements occurring within Napa County's portion of Upper Bohn Reservoir would be subject to these Conservation Regulations. The EIR should evaluate the project potential to impact wildlife movement corridors between Lake and Napa Counties.

4. Cultural and Tribal Resource – There are cultural resource sites within Napa County that are in close proximity to the project. The EIR should evaluate the project's potential to impact these resources.

5. Airport Land Use Compatibility – The EIR should evaluate the frequency and characteristics of overflights occurring within Napa County as a result of the proposed new airport and helipads. The EIR should evaluate the project's potential to result in noise, safety, airspace protection, and overflight impacts within Napa County. The State Aeronautic Act requires Lake County Airport Land Use Commission review of any proposal for a new airport (Public Utilities Code 21661.5). Airport land use compatibility measures within Napa County are under the jurisdiction of the Napa County Airport Land Use Commission.

6. Hydrology and Water Quality – The entire project site lies within stream basins that drain into Napa County to Lake Berryessa. Surface water and ground water modeling should evaluate the project's potential to impact surface and groundwater resources within Napa County, including potential impacts to water quality. Approximately 3.5 miles from the project site is the Berryessa Estates Subdivision which sources potable water from Putah Creek just downstream from its confluence with Butts Creek, both of which drain the project site. The EIR should evaluate the project's potential to impact was quality and quantity at the Berryessa Estates Subdivision.

7. Land Use and Planning – Any project improvements or uses occurring within Napa County, including subdivision of any legal lots of record lying within both Lake and Napa Counties, is subject to the Napa County jurisdiction. For project features within Napa County, the EIR should evaluate the project consistency with all applicable Napa County General Plan land use policies and supporting regulations.

8. Noise – The location of outdoor amphitheater and areas intended for amplified music not shown in the NOP's site plan. The EIR should analyze potential noise impacts to impact sensitive noise receptors in Napa County, including wildlife.

9. Population and Housing – The EIR should evaluate the project's potential to induce housing and other growth within Napa County.

10. Public Services – The EIR should evaluate the project's potential to affect public services provided by Napa County.

11. Transportation – The EIR should evaluate the project's potential to result in significant traffic impacts within Napa County, both in terms of project-specific impacts and the project's contribution to cumulative impacts. With Napa County, the project is likely to result in increases in traffic generation on Butts Canyon Road including the street network within Pope Valley that feeds into Butts Canyon Road, and on State Route 29 including the street network feeding into State Route 29 in the vicinity of Calistoga. Traffic modeling within Napa County should rely on the regionally-compliant Solano-Napa Travel Demand Model.

12. Utilities and Service Systems – The EIR Should evaluate the project's potential to affect utilities within Napa County, including identification of any improvements to utility systems within Napa County. Please identify how natural gas will be provided to the project.

13. Wildfire – The EIR should evaluate the project's potential to impact Napa County's emergency response operations. The Initial Study notes that Lake County's emergency operations and local hazard mitigation plans were recently updated, and finds that the project will not impair implementation of those plans. Given the large scale of this project, and its generally remote location, Napa County urges reconsideration of this conclusion. Both the emergency operations plan and local hazards mitigation plan are likely impacted by a project of this scale at this location. As you aware, significant portions of the subject property burned in the Butts Fire (2018) and the Valley Fire (2014). The scale of the Valley Fire overwhelmed Lake County's emergency response capabilities. Hundreds of Lake County residents were sheltered at the Calistoga Fairgrounds beyond capacity, and resulting in Napa County declaring an emergency in response to the refugee crisis. The fairgrounds would not have been able to handle more refugees had this development already existed.

14. Wildfire - Page 13 of the NOP states that a fire management plan is being developed that will include strategic fire breaks and other management measures. The EIR should address whether any of those measures will be located within Napa County, or result in changes to the physical environment in Napa County.

The intent of these comments is to outline the sufficiency of the environmental review document in identifying and analyzing the possible impacts to Napa County, and the ability Napa County to utilize the document in reviewing and issuing any associated permits necessary for project implementation.

Napa County thanks you for providing an opportunity to review and comment on the NOP, and eventually the Draft EIR. Please add my contact information to the mailing/email list for future noticing on this project. If you should have any questions regarding any of the items listed above, please feel free to contact me at your convenience at 707-299-1354 or john.mcdowell@countyofnapa.org.

Sincerely,

John McDowell

Sacramento, CA 95812-3044

CEQA Project: **SCH# 2019049134**
Lead Agency: **County of Lake – Community Development Department**
Project Title: **Guenoc Valley Mixed-Use Planned Development Project**

The Division of Oil, Gas, and Geothermal Resources (Division) oversees the drilling, operation, maintenance, and plugging and abandonment of oil, natural gas, and geothermal wells. Our regulatory program emphasizes the wise development of oil, natural gas, and geothermal resources in the state through sound engineering practices that protect the environment, prevent pollution, and ensure public safety. Northern California is known for its geothermal energy fields, and as such, division staff have reviewed the above referenced documents depicting the proposed project. A Notice of Preparation of an Environmental Impact Report for the proposed Guenoc Valley Mixed-Use Planned Development Project has been submitted to The County of Lake – Community Development Department. The purpose of this project is to develop a master planned mixed-use resort and residential community within the 16,000-acre Guenoc Valley Ranch property. The project requires an amendment to the General Plan and Special Study Area, a Zoning Ordinance amendment, a land use rezoning, Tentative Subdivisions Maps, a General Plan of Development, a Development Agreement, and Environmental Impact Report, Grading permits, and a Tentative Subdivision Map for off-site workforce housing.

Division staff have reviewed the documents describing the proposed project area. Approximately twenty-three known plugged and abandoned shallow geothermal temperature gradient wells are located within the proposed project area. The Well Location Map below shows these plugged and abandoned wells. A final letter was issued indicating these shallow temperature gradient wells were abandoned to standard at that time. As these were shallow temperature gradient wells, a 1" to 1 ½" pipe was installed in the well to measure temperatures. Abandonment included the placing of a surface plug in the well bore and restoration of the well location. The

DocuSign Envelope ID: AC4E20F8-99A8-424C-971E-9085B9DDD1BD

twenty-three wells, in no particular order, are referred to as the "**GR" 19, API#: 03390309, "GR" 14, API#: 03390270, "GR" 23, API#: 03390313, "GR" 20, API#: 03390310, "GR" 24, API#: 03390314, "GR" 12, API#: 03390269, "GR" 46, API#: 03390335, "GR" 26, API#: 03390316, "GR" 30, API#: 03390319, "GR" 26, API#: 03390316, "GR" 43, API#: 03390332, "GR" 44, API#: 03390333, "GR" 10, API#: 03390267, "GR" 8, API#: 03390265, "GR" 41, API#: 03390544, "GR" 40, API#: 03390329, "GR" 9, API#: 03390266, "GR" 31, API#: 03390320, "71" 31, API#: 055900708, "GR" 36, API#: 03390325, "GR" 6, API#: 03390264, "GR" 2, API#: 03390262, and "GR" 1, API#03390261.**

The Division has conducted a records and map review within the proposed project boundary but not an on-site evaluation of any known geothermal wells located within the project boundary.

For future reference, you can review geothermal wells located on private and public land at the Division's website: https://www.conservation.ca.gov/dog/geothermal/geosteam.

The local permitting agencies and property owner should be aware of, and fully understand, that significant and potentially dangerous issues may be associated with development near oil and gas, or geothermal wells. These issues are non-exhaustively identified in the following comments and are provided by the Division for consideration by the local permitting agency, in conjunction with the property owner and/or developer, on a parcel-by-parcel or well-by-well basis. As stated above, the Division provides the above well review information solely to facilitate decisions made by the local permitting agency regarding potential development near a geothermal well.

1. If, during the development of this proposed project, **any unknown geothermal well(s) is/are discovered**, the Division should be notified immediately so that the newly-discovered well(s) can be incorporated into the records and investigated. The Division recommends that any wells found during this project, and any pertinent information obtained after the issuance of this letter, be communicated to the appropriate county recorder for inclusion in the title information of the subject real property. This is to ensure that present and future property owners are aware of (1) the wells located on the property, and (2) potentially significant issues associated with any improvements near geothermal wells.
2. No well work may be performed on any low or high temperature geothermal well without written approval from the Division in the form of an appropriate permit. This includes, but is not limited to, mitigating leaking fluids or gas from abandoned wells, modifications to well casings, and/or any other re-abandonment work. (NOTE: The Division regulates the depth of any well below

DocuSign Envelope ID: AC4E20F8-99A8-424C-971E-9085B9DDD1BD

final grade (depth below the surface of the ground). Title 14, section 1981 of the California Code of Regulations states that all well casings shall be cut off at least 6 feet below grade. If any well needs to be lowered or raised (i.e. casing cut down or casing riser added) to meet this grade regulation, a permit from the Division is required before work can start.)

Sincerely,

[sent 05/22/2019, sent from the e-mail Sheri.Miller@waterboards.ca.gov]

The State Water Resources Control Board, Division of Drinking Water offers the following comment regarding the proposed "Guenoc Valley Mixed-Use Planned Development Project:

The proposed project requires a domestic water supply permit from the State Water Board prior to delivering water for public use. As the proposal will create a new public water system, the applicant will need to comply with the California Health and Safety Code which requires the applicant submit a preliminary technical report no later than seven days after submission of an application to the county for a building permit for any water-related improvement. If the report is approved by the State Water Board, the applicant can then apply for a water supply permit. For the preliminary technical report, the applicant will need to communicate with the County's Local Area Formation Commission and request water service from all public water systems within a three-mile radius to determine if water service can be provided from an already existing utility.

Subject: RE: Notice of Preparation of an EIR for the proposed Guenoc Valley Mixed Use-Planned Development
Attachments: CapAnalysisPolicy_001.pdf

Mark,

The proposed project site at 22000 Butts Canyon Road is outside any Special District service areas, no impact.

However, the proposed Off-Site Workforce Housing site at 21000 Santa Clara Road/ APN 014-380-09 in Middletown is within our Assessment District 2-2 LACOSAN Middletown Sewer service are. It is within Floodway Fringe and has not been assessed for sewer service.

Projects of four single family dwelling equivalent units or greater will require the submittal of a Capacity Analysis/Hydraulic Model Policy. The analysis is to be prepared by a licensed civil engineer and will be reviewed and approved by the District. Please see the attached Capacity Analysis/Hydraulic Model Policy for your review.

Also, before the issuance of any building permits, Capacity Expansion fees as well as Buy-In fees per single family equivalent will be due and paid to the District. Current fees are listed below:

Buy-In Fee per SFD equivalent is $1,974.70

Capacity Expansion Fee per SFD equivalent is currently $5,229.94

(50% of the Capacity Expansion fee is due for units 720 square feet or less)

The Capacity Expansion Fee increases by the Consumer Price Index at the beginning of every calendar year.

****Connections to LACOSAN will be made in accordance with the rules, regulations, policies, and procedures and ordinances in effect at the time of application****

If you have any questions please do not hesitate to call me.

Jan Coppinger
Special Districts Administrator

CAPACITY ANALYSIS/HYDRAULIC MODEL POLICY

Special Districts maintains four wastewater treatment facilities and five water systems. Each system is unique so far as when it was constructed, treatment methods and available capacity to serve new development.

The District requires that developers wishing to construct four single-family equivalent units or more, submit a capacity analysis to the District for review. Please note that in the area served by the **Southeast Regional Wastewater and Northwest Regional Treatment Facilities, the number of proposed single-family dwelling equivalent units that require the submittal of an analysis, is twenty.** The analysis is to be prepared by a licensed civil engineer and will examine water distribution, storage and treatment as well as sewer collection, pumping and treatment as is applicable to the project area. The purpose of the analysis is to identify deficiencies, (if any) in the system(s) from the project site to the treatment plant(s).

The developer will be required to reimburse the District for hours billed by Department of Public Works engineering staff and/or the District's engineering consultant for review of the Capacity Analysis. The developer will also be required to mitigate impacts to the collection and/or distribution system(s) specifically attributable to the project and as identified in the approved Capacity Analysis. Once approved, A Capacity Analysis shall remain in effect and valid for a period not to exceed two (2) years, unless an extension is granted by the Administrator.

Please note that for development in the area served by LACOSAN from Lower Lake to Clearlake Park, as well as from Beach Street to Paradise Valley, hydraulic models are available. The developer provides a project description, the information from which is "plugged into" the model and an analysis is provided to the developer for a fee. (revised 7/2/09)

Connections to all District maintained water and/or sewer systems will be made in accordance with the rules, regulations, policies, procedures and ordinances in effect at the time of connection application.

Subject: Notice of Preparation of an Environmental Impact Report for the proposed Guenoc Valley Mixed-Use Planned Development Project

Dear Ms. DelValle,

Thank you for the opportunity to review and comment on the Notice of Preparation for an Environmental Impact Report for the Guenoc Valley Mixed-Use Planned Development Project. The proposed project consists of the development of a master planned mixed-use resort and residential community within the 16,000-acre Guenoc Valley Ranch property near Middletown and an off-site workforce housing in central Middletown. Access to the site is provided by SR 29 via Butts Canyon Road, a County Maintained Road. The off-site workforce housing is provided by SR 175 via Santa Clara Road, also a County Maintained Road.

The Lake County Department of Public Works is a responsible agency on this project and has the following comments:

1. Please include a traffic impact analysis that will show how the proposed project will impact the safety, capacity and maintenance of Butts Canyon Road and Santa Clara Road. There are three short segments along Butts Canyon Road where, due to either horizontal alignment issues and/or lack of adequate recovery areas, the collision rates exceed the average collision rates for similar facilities statewide. Please contact this Department for the specific locations.

2. Consider non-regulatory traffic control measures including roundabouts and other traffic calming measures along Butts Canyon Road at project access points rather than regulatory signs and/or traffic signals.

3. Include a walkability analysis for the off-site workforce housing facility to identify improvements needed for residents of the workforce housing to safely walk or bike to businesses and schools within the Middletown area.

4. In consideration of any future development, no additional surface runoff is allowed to be discharged into county drainage facilities.

5. Improvement plans and a cost estimate prepared by a registered Civil Engineer will be required for construction of any road improvements within the existing County right of way or proposed public right of way. A signed Inspection Agreement and a deposit of 2% of the engineers cost estimate will need to be submitted to the Department of Public Works prior to plan review.

Please continue to keep us informed of this project as it progresses. If you have any questions please do not hesitate to contact me at the number above.

Sincerely,

Scott De Leon, Director

1-LAK-29-6.36
Guenoc Valley Mixed-Use NOP

Ms. Michalyn DelValle, Director
Community Development Department
County of Lake
255 N. Forbes Street
Lakeport, CA 95453

Dear Ms. DelValle:

Thank you for giving us the opportunity to comment on the Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the proposed Guenoc Valley Mixed-Use Planned Development Project. The proposed development consists of a master planned mixed-use resort and residential community within the 16,000-acre Guenoc Valley Ranch property. The luxury destination resort consists of five hotels with up to 400 rooms/units, and up to 450 fractional ownership units, 1400 residential estate villas, 500 workforce housing units, recreational facilities, agricultural facilities and accessory uses. Workforce housing for employees is proposed to be located off-site at 21000 Santa Clara Road in Middletown. The primary access to the Guenoc Valley Ranch is from State Route 29 via Butts Canyon Road with a secondary access at Grange Road. We have the following comments:

- The Notice of Preparation for the project EIR states that the County will prepare a Traffic Impact Analysis (TIA) for the proposed project, which will address the potential impacts to surrounding roadways and include an evaluation of bicycle travel, pedestrian travel, and emergency access. We request that the TIA include the intersection of State Route 29 with Grange Road, Butts Canyon Road, Wardlaw Street, and State Route 175 among the surrounding roadways analyzed.

- The Traffic Impact Analysis is proposed to include an analysis of "overall Vehicle Miles Traveled" (VMT). If the County has not already established a threshold of significance for VMT, it is unclear whether any impacts can or will be identified. The State has set a target of reducing VMT Statewide by 15%. We recommend that the traffic analysis evaluate VMT per capita for the region (Lake County or Middletown, if data is available) as well as VMT (per capita) generated by the development. If the project does not help to achieve the Statewide goal of a 15% VMT reduction, we recommend that the resort provide mitigation that will help to reduce project VMT. Potential mitigation could include offering a shuttle service for employees and guests, electric vehicle parking for visitors and electric service vehicles, rental or loaner bikes, and robust pedestrian amenities.

- Any work performed within Caltrans right of way, including intersection improvements or surveying and traffic studies, requires an approved Caltrans Encroachment Permit. Prior to permit application submittal, the applicant is required to attend a pre-submittal meeting with the Caltrans Encroachment Permits staff in Ukiah. For more information or to request an encroachment permit, please contact Amber McCall or Jim Shupe at the Ukiah Permits Office at 707-463-4743. For future reference, the Caltrans Encroachment Permit is available online at: <http://www.dot.ca.gov/trafficops/ep/manual.html>.

Feel free to contact Rex Jackman at (707) 445-6412 or myself, at (707) 441-4693 with questions or for further assistance.

Sincerely,

JESSE ROBERTSON

COMMENTS TO REQUEST FOR REVIEW FOR THE NOTICE OF PREPARATION FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT, GUENOC VALLEY MIXED-USE PLANNED DEVELOPMENT PROJECT, SCH#2019049134, LAKE COUNTY

Pursuant to the State Clearinghouse's 23 April 2019 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Request for Review for the Notice of Preparation for the Draft Environmental Impact Report* for the Guenoc Valley Mixed-Use Planned Development Project, located in Lake County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore our comments will address concerns surrounding those issues.

I. Regulatory Setting

Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically

as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases, the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues.

For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:
http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/

Antidegradation Considerations
All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Implementation Policy is available on page 74 at:
https://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/sacsjr_201805.pdf

In part it states:

> *Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.*
>
> *This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.*

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

II. Permitting Requirements

Construction Storm Water General Permit
Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction Activities

(Construction General Permit), Construction General Permit Order No. 2009-009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP).

For more information on the Construction General Permit, visit the State Water Resources Control Board website at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml

Phase I and II Municipal Separate Storm Sewer System (MS4) Permits[1]
The Phase I and II MS4 permits require the Permittees reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

Industrial Storm Water General Permit
Storm water discharges associated with industrial sites must comply with the regulations contained in the Industrial Storm Water General Permit Order No. 2014-0057-DWQ.

---

[1] Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

For more information on the Industrial Storm Water General Permit, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/industrial_general_permits/index.shtml

Clean Water Act Section 404 Permit

If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACE). If a Section 404 permit is required by the USACE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements.

If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACE at (916) 557-5250.

Clean Water Act Section 401 Permit – Water Quality Certification

If an USACE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications.

For more information on the Water Quality Certification, visit the Central Valley Water Board website at:
https://www.waterboards.ca.gov/centralvalley/water_issues/water_quality_certification/

Waste Discharge Requirements – Discharges to Waters of the State

If USACE determines that only non-jurisdictional waters of the State (i.e., "non-federal" waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation.

For more information on the Waste Discharges to Surface Water NPDES Program and WDR processes, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_surface_water/

Waste Discharge Requirements – Discharges to Land
Pursuant to the State Board's Onsite Wastewater Treatment Systems Policy, the regulation of the septic system may be regulated under the local agency's management program.

For more information on waste discharges to land, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_land/index.shtml

Dewatering Permit
If the proposed project includes construction or groundwater dewatering to be discharged to land, the proponent may apply for coverage under State Water Board General Water Quality Order (Low Risk General Order) 2003-0003 or the Central Valley Water Board's Waiver of Report of Waste Discharge and Waste Discharge Requirements (Low Risk Waiver) R5-2013-0145. Small temporary construction dewatering projects are projects that discharge groundwater to land from excavation activities or dewatering of underground utility vaults. Dischargers seeking coverage under the General Order or Waiver must file a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Risk General Order and the application process, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf

For more information regarding the Low Risk Waiver and the application process, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2013-0145_res.pdf

Regulatory Compliance for Commercially Irrigated Agriculture
If the property will be used for commercial irrigated agricultural, the discharger will be required to obtain regulatory coverage under the Irrigated Lands Regulatory Program.
There are two options to comply:

1. **Obtain Coverage Under a Coalition Group.** Join the local Coalition Group that supports land owners with the implementation of the Irrigated Lands Regulatory Program. The Coalition Group conducts water quality monitoring

and reporting to the Central Valley Water Board on behalf of its growers. The Coalition Groups charge an annual membership fee, which varies by Coalition Group. To find the Coalition Group in your area, visit the Central Valley Water Board's website at: https://www.waterboards.ca.gov/centralvalley/water_issues/irrigated_lands/regulatory_information/for_growers/coalition_groups/ or contact water board staff at (916) 464-4611 or via email at IrrLands@waterboards.ca.gov.

2. **Obtain Coverage Under the General Waste Discharge Requirements for Individual Growers, General Order R5-2013-0100**. Dischargers not participating in a third-party group (Coalition) are regulated individually. Depending on the specific site conditions, growers may be required to monitor runoff from their property, install monitoring wells, and submit a notice of intent, farm plan, and other action plans regarding their actions to comply with their General Order. Yearly costs would include State administrative fees (for example, annual fees for farm sizes from 11-100 acres are currently $1,277 + $8.53/Acre); the cost to prepare annual monitoring reports; and water quality monitoring costs. To enroll as an Individual Discharger under the Irrigated Lands Regulatory Program, call the Central Valley Water Board phone line at (916) 464-4611 or e-mail board staff at IrrLands@waterboards.ca.gov.

Limited Threat General NPDES Permit

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Limited Threat Discharges to Surface Water* (Limited Threat General Order). A complete Notice of Intent must be submitted to the Central Valley Water Board to obtain coverage under the Limited Threat General Order.

For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2016-0076-01.pdf

NPDES Permit

If the proposed project discharges waste that could affect the quality of surface waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit.

For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at:
https://www.waterboards.ca.gov/centralvalley/help/permit/

If you have questions regarding these comments, please contact me at (916) 464-4812 or Jordan.Hensley@waterboards.ca.gov.

REQUEST: Guenoc Valley Mixed Use Project, including:

- Amendment to the General Plan and Special Study Area map of the Middletown Area Plan to include the area commonly known as the college parcels (GPAP 18-01);
- Zoning Ordinance Amendment to introduce a new zoning district to allow for future uses, Guenoc Valley District ("GVD"), to implement the goals of the Special Study Area, and subsequently rezoning of the Project Site from Rural Lands, Agriculture, Rural Residential, and an Agricultural Protection Zone to GVD (AM 18-04; RZ 18-01);
- Use Permit for the Specific Plan of Development (Master Development Plan) for the first phase (UP 18-01);
- Tentative Subdivision Maps for the first phase (SD 18-01);
- General Plan of Development (GPD 18-01);
- Development Agreement (DA 18-01);
- Environmental Impact Report (EIR 18-01);
- Grading permit for Installation of water line; and
- Tentative Subdivision Map for off-site workforce housing.

APPLICANT/OWNER: Lotusland Investment Holdings

APNs: Various – see attached

LOCATION: Butts Canyon Road

ZONING:	Various
GENERAL PLAN:	Various
FLOOD ZONE:	Portion
PROPOSAL:	See Below

Description of the type of requested permit:

The Proposed Project consists of the development of a master planned mixed-use resort and residential community within the 16,000-acre Guenoc Valley Ranch property (Project Site) in southeast Lake County and off-site workforce co-housing on an approximately 12.75-acre property located in central Middletown (Off-Site Workforce Housing Site). The Project Site is comprised of 49 parcels totaling approximately 16,000 acres in southeast Lake County. The Project Site is generally bounded by Long Valley and Coyote Valley to the west, a U.S. Coast Guard LORAN station military reservation to the northwest, the Cedar Mountains to the north, and the Lake County border to the east. The Project Site is located approximately three miles east of State Route (SR) 29 and 13 miles west of SR 16. Access to the site is provided by SR 29 via Butts Canyon Road to the northwest. Butts Canyon Road bisects the southern portion of the Project Site. The project proposal consists of multiple resort properties with 175 Hotel rooms, 144 Resort Residential units, and 381 Residential Villas, along with 98 on-site workforce housing units and an additional 50 short-term stay units.

Please find project materials at the following location:
http://www.lakecountyca.gov/Government/Directory/Community_Development/Planning/GuenocValley.htm

Located at the above website are the following documents:

- Specific Plan of Development (SPOD), including complete project description and detailed site maps
- Draft Zoning Ordinance for the Guenoc Valley Zoning District (GVD)
- Existing and Proposed Land Use Designations
- List of Project Parcels

An Initial Study has been prepared for the project, in compliance with the California Environmental Quality Act. An EIR is currently being written. Please advise us if additional information is needed, which permits are required from your agency (if any), and of your environmental concerns. Additionally, please advise if your agency recommends any modifications to the project that would reduce potential environmental impacts. Due to the provisions of state law, it is essential that we receive your comments as soon as possible but in no case later than **June 20, 2019** Please email your comments to Byron Turner at Byron.Turner@lakecountyca.gov or mail them to the address listed in the letterhead above. Additionally, please contact Byron if you need hard-copies of the site plans or subdivision maps.

COMMENTS: I have reviewed the Initial Study and related Dox and would like to know if the RWQCB and SWRCB will require a new public agency to be formed for Water and Wastewater services. If so, LAFCo will become a responsible agency. Normally for projects of this size a "Community Services District "or "Public Utility District" would be formed for public water and wastewater. Perhaps a "County Service Area" could be formed for Water and "LACOSAN" could provide the Wastewater Services. I find it very unusual that no public agency is mentioned anywhere for these services. At a minimum, the EIR should acknowledge that LAFCo may become a responsible agency should any public entity be formed to serve the development. So in the purposes of the EIR section, LAFCo should be mentioned for the formation of service districts and the EIR will be used for the

formation of or annexation to any special district. I believe the answer to my question as to whether or not a public agency is to be formed would be evaluated and determined in the environmental document and would therefore be required as a mitigation measure. Please email LAFCo a copy of the draft environmental document once completed.

As a footnote, Lake County has a Countywide CSA for Road Mainenance and the project is in the South Lake County Fire Protection District for fire and EMS. A concern would be the development may be located in a high fire hazard area.

Let me know if I can help with any service provision issues.

NAME John Benoit, LAFCo DATE 6-19-2019

Dedicated to preserving Lake County's natural resources through education, cooperation, and preservation.

Subject: Notice of Preparation of an Environmental Impact Report for the proposed Guenoc Valley Mixed Use Planned Development Project

Dear Ms. DelValle,

Thank you for the opportunity to provide input on the subject project. I apologize for the tardiness of these comments.

The proposed Guenoc Valley Project is within a major wildlife corridor connecting public and protected lands with the Mayacamas Mountains and the Berryessa Snow Mountain National Monument. The Project is within the corridor between Mt. St. Helena and the National Monument, probably the most important corridor between the Mayacamas Mountains and National Monument south of the Mendocino National Forest. The proposed development has the potential to disrupt this important connectivity.

The Mayacamas to Berryessa Landscape Connectivity Network (M2B) coordinated by the Pepperwood Reserve mapped structural and riparian connectivity. Attached is some basic information on M2B. The proposed development appears to disrupt at least two of the structural linkages. More information, including technical reports can be found on M2B by searching for "Mayacamas to Berryessa" on the databasin.org website or by contacting the Pepperwood Foundation. The link is:

https://databasin.org/galleries/8fd96e4df2f04896ae4234f5d50cf997

The Nature Conservancy (TNC) appears to have similar findings with their Omniscape Connectivity mapping, which identifies wildlife connectivity through the Guenoc properties. The results of their mapping may be viewed at:

Pepperwood PRESERVE

Protecting Habitat Corridors for Climate Adaptation

Mayacamas to Berryessa Landscape Connectivity Network (M2B)

The Mayacamas to Berryessa Landscape Connectivity Network (M2B) is a public-private collaboration between land trusts, open space and park districts, State and Federal land managers, and ecology researchers committed to assessing the landscape-level conservation needs of Northern California's Inner Coast Ranges. The goal is to co-create practical conservation strategies for addressing biodiversity and watershed health while protecting resiliency of these habitats in the face of climate change, drought and fire. Pepperwood serves as the team's backbone organization and facilitated team activities including habitat mapping, landscape linkage analyses, and climate threat assessments to build a habitat connectivity roadmap across Sonoma, Napa and Lake Counties. This landscape-level vision spans from the Mayacamas Mountains to the new Snow Mountain-Berryessa National Monument and identified priority locations for habitat corridor projects. The site-specific habitat corridor reports generated by the M2B network identify specific parcels for conservation and the resulting climate adaptation benefits. The resulting data products can be used by network partnership to support funding and implementation needs for corridor protection and enhancement.

Why habitat connectivity? Keeping landscapes connected via habitat linkages or corridors is the most frequently recommended approach to maintain ecosystem resilience in the face of climate change as it provides an "escape route" for plants and animals to relocate when their habitats are no longer viable due to climate or other changes. Linking also allows resources to pass between habitats that are increasingly confined by human development.

Approach: The M2B Network relies on the collaboration of diverse stakeholders to both acknowledge and anticipate the environmental needs of this region. Network scientists and land managers are developing habitat corridor plans based on the following assessments.

- Identification of potential habitat linkages based on terrestrial and riparian connectivity of natural habitats between existing protected areas
- Quantification of habitat corridor climate benefits by estimating the ability of species to escape rising temperatures via movement corridors, based on state-of-the art, high- resolution climate projections
- Generation of maps to compare the vulnerability of specific sites to fire, drought, and other environmental concerns with their contribution to the overall ecological health of the region, which will help guide priorities for land and easement acquisition and habitat restoration

Communications and Outreach: The M2B network created a standardized vocabulary for communicating key science concepts to public and private landowners about the climate adaptation value of keeping natural and working landscapes connected. This vocabulary and basic messaging materials will support a consistent outreach effort via diverse partners across the region, including local Resource Conservation Districts and extension agents.

Key Research Findings: The M2B network relies upon scientific research to design and implement habitat assessment tools. A technical *M2B Methodology Report* (Gray et al. 2018) describes the innovative scientific methods supporting our work, and is supplemented by six site-specific habitat corridor reports that illustrate how terrestrial, riparian, and climate connectivity can be used – in combination or independently – to identify locations of conservation value that provide connectivity benefits today and under scenarios of landscape change. Among our major findings was the importance of accounting for seasonality in Mediterranean climates with a coastal influence. Because the effects of climate change will likely differ by season and location, it is important to consider

the seasonal needs of wildlife across the landscape when planning for connectivity. Our research is integrated into a database that is shared by partners and visible to the public via Data Basin (databasin.org)

Key Conservation & Land Management Findings: By directly involving stakeholders in the modeling process and evaluation of results, we ensure that users can use the data and maps we have acquired to inform actionable local and regional strategies. The combination of high-resolution landscape permeability and climate datasets provides local decision-makers with flexible science-based tools for exploring, planning, and implementing habitat connectivity pathways. In the M2B region, parcel-scale acquisition and stewardship will be advanced primarily by private land trusts and public open space districts in concert with State and Federal land management agencies.

A Model for California and Beyond: Successful climate change adaptation requires building social and physical landscape linkage networks and cultivating a shared understanding of how land use and climate change will influence future connectivity. Our analytical results are designed to be scalable and reproducible throughout California. The formation of the M2B network provides a documented model for empowering local agencies and organizations to work effectively, and in a coordinated fashion, to achieve landscape-level conservation objectives.

The Mayacamas to Berryessa Steering Committee includes representation of ten leadership agencies, including Audubon Canyon Ranch, Blue Ridge Berryessa Natural Area Partnership, California Department of Fish and Wildlife, Lake County Land Trust, Land Trust of Napa County, McLaughlin Reserve, Sonoma County Agriculture + Open Space District, Sonoma County Regional Parks, Sonoma Land Trust, and the United States Bureau of Land Management.

Project support for *Building Habitat Connectivity for Climate Adaptation: Mayacamas to Berryessa Connectivity Network (M2B)* provided by the California Landscape Conservation Partnership, F16AC00574.

LAKE COUNTY COMMUNITY DEVELOPMENT DEPT.

COUNTY OF LAKE PUBLIC SCOPING MEETING

Guenoc Valley Mixed-Use Planned Development Project Environmental Impact Report

COMMENT FORM

(Comments Due by 5:00 PM on May 23, 2019)

Scoping meeting locations: County of Lake Board of Supervisors Chambers - 255 N. Forbes Street, Lakeport, CA and Middletown Community Room, Middletown Library - 21256 Washington Street, Middletown, CA

I would like the following topics, issues, and/or concerns to be covered in the Environmental Impact Report:

I would like to make the following statement: The location of the optional offsite well is one that will impact the Middletown Aquifer - is approximately 2 miles from a Geothermal Waste Site that has contaminents in the ground water. This plume is 75 acres - most outside the Fenced area. There is a plume headed toward Middletown approx 2000' long 300' wide & 30-50 feet deep. The proposed well will create a cone of depression that will draw water to try & fill the depression then piped to another aquifer that already has its level of water will create a push. So the depression will create a pull & pumping will create a push of->

(If you need additional room, please use reverse side)

Name: Lynn Dicht-Daems Phone Number: (707) 355-4747

Affiliation: Middletown Community Member

Address: PO Box 150, Middletown, CA 95461-0150

E-mail address: pinkywink05@gmail.com

Would you like your name to be added to the mailing list for this project? If you are on the mailing list you will receive notification of public meetings and notice of publication of environmental documents.

X YES ___ NO

NOTE: Please give this comment to meeting attendant or mail to the County of Lake, Community Development Department: c/o Byron Turner, Principal Planner, 225 N. Forbes Street, Lakeport, CA 95453. On the envelope, please include your name, return address, and the caption: Scoping Comment, Guenoc Valley EIR

water. Like a circulating pump. This leads to the very real possibility of moving the plume down toward private wells. Then eventually in the Middletown aquifer. The waste is more than drilling mud, although that is what is documented. The owners of that site prior to being closed, were accepting waste that should have been trucked to Benecia hazardous waste site. There are people who live here that worked there during the time & people who were impacted by contact with this waste.

To those making the decison as to whether to accept the location of this optional well, are you willing to take ~~[illegible]~~ responsibility that your decision if it is to accept this option could negatively impact the health & wellbeing of our community. Also, ask yourself if you would be comfortable having Yourself or a loved one live down from a plume of contaminants that has the real possibility of moving because of the volume of water that would be pulled out.

[sent May 21st, 2019]

To whom this may concern:

After reading the proposed EIR for the Guenoc Valley Development Project, I have deep reservations that the report does not address the Dark Skies Initiative in Lake County. Especially in light of the Board of Supervisors' approval of the Dark Sky Proclamation last November; this issue needs to be considered as part of the EIR. This development may be an overall plus for Lake County, but only if care is taken to have as little impact on the environment as possible, and maintain the night beauty we all hold valuable. Mitigation measures to alleviate light pollution should be taken to keep the light down at night such as: the use of downward facing lighting fixtures, dark-sky friendly light bulbs, limit night sky traffic, and an absolute minimal night lighting when all is closed for the evening etc.

Being able to see the stars at night is a big part of what makes Lake County so unique!

Thank you for the opportunity to be heard on this issue, and I hope my concerns are seriously addressed.

Sincerely,

Julie Kreis

Citizen of Lake County since 1978

[sent 05-21-2019, from the e-mail melissakinsel7@gmail.com]

Dear Michalyn,

In reading the proposed EIR for the Guenoc Valley Development Project, I am concerned that the report does not address the Dark Skies Initiative in Lake County. Especially in light of the Board of Supervisors' approval of the Dark Sky Proclamation last November, this issue needs to be considered as part of the EIR. I think the development will be an overall plus for Lake County, but only if care is taken to have as little impact on the environment as possible. Mitigation measures to alleviate light pollution should be taken to keep the light down at night, use downward facing lighting fixtures, dark-sky friendly light bulbs, limit night sky traffic, etc.

Being able to see the stars at night is a big part of makes Lake County so special!

I appreciate the opportunity to be heard on this issue.

[sent 05-21-2019, from the e-mail 4val944@gmail.com]

Dear Michalyn,

Please include Dark Sky criteria in the permits for the Guenoc Development. Lake County has some of the most beautiful dark sky in the state. Our Board of Supervisor recognized it's value last November. In allowing for progress we must consider the intrinsic value of why so many of us love it here.

Thank you,

Val Meyer Nixon

Kelseyville

Val Meyer Nixon

[sent 05-22-2019, sent from the e-mail liskaplan@gmail.com]

Dear Michalyn,

I am concerned that the EIR on the Guenoc Development does not adequately address our Dark Skies proclamation for Lake County which was Board of Supervisor approved last November. this should be considered as part of the EIR.

While economic development is important to Lake County, it should have the least possible impact on the natural environment which is our most important asset and attraction. Let's carefully mitigate and limit the impact on our dark skies.

Thank you,

RE: Scoping comments, Guenoc Valley Mixed-Use Planned Development Project

Dear Ms. DelValle:

Lake Group appreciates this opportunity to engage in discussion about the environmental impacts of this major project from the beginning. We have been involved in previous applications for development in this area for a number of years, including the 2008 Langtry Farms golf course (an application that the Sierra Club supported), and were also engaged in the Middletown Area Plan process.

Obviously a project of this magnitude has the enormous potential to impact Lake County both positively and negatively. It's therefore particularly important that all effects be subject to stringent evaluation, and every effort made to predict possible consequences. In general, we agree with the conclusions of the Initial Study regarding the scope of work needed, and will wait to comment on specific impacts and proposed mitigations when that analysis is made available in the Draft Environmental Impact Report (DEIR).

We do however have several concerns that seem worth mentioning at this time.

Land Use and Planning. The Middletown Area Plan (MAP) MAP devotes particular attention to the Guenoc Valley, which it designates as a Special Study Area with "up to 800" residential units. In contrast, the current application calls for 1400 residential units (1900 in Appendix C). We question the desirability of approving such a dramatic increase in density, not only because of direct impacts on the site, but also because of possible precedents that could affect other parts of the county. At a very minimum, compelling justification for disregarding the standards of the Area Plan should be required before considering such a variance.

In principle, we support the proposal to include workforce housing in the project, both on site and in Middletown, but question the appropriateness of constructing "co-living" facilities in 400 square-foot bedroom and bath units with "shared cooking and resting areas" rather that traditional multi-unit apartments or single family residents. To the best of our knowledge, this kind of living arrangement doesn't correspond with any residential category in either the MAP or Lake County General Plan.

The proposal to analyze the first phases of the project (covering the next 10 years) at the project level, and the remainder at the program level is fraught with problems unless the distinction between the two is made crystal clear, and the program/project analysis kept

separate to the greatest extend possible. with this approach, to succeed has to very clearly distinguish between the two categories.

Recreation. Table 1, 3.5 refers to the construction of a new golf course and also the possibility of reconstructing the existing course, which was damaged in the 2015 Valley Fire. We strongly recommend that the decision about whether to have one course or two be made as quickly as possible, and the analysis be conducted accordingly.

Table 1, 3.6 mentions a 45-acre "wilderness" area which will contain "semi permanent tents" and "off road courses." The word "wilderness" has a specific meaning in state and federal law, a meaning that doesn't allow any sort of permanent or semi-permanent structure. Although this designation doesn't apply to private lands and landholders are at liberty to call their properties anything they please, we recommend that confusion be avoided by choosing different nomenclature such as "natural recreation area" or something similar.

The project site is adjacent to BLM lands in the Berryessa Snow Mountain National Monument. It would be to the benefit of developers, hotel guests, residents and the general public to explore the possibility of collaborative recreational use.

Energy. We commend the proposal to set aside 50 acres for alternative energy production, but wonder why this part of the project can't be integrated into construction generally, by systematic installation of rooftop solar generating facilities on residences and commercial property? Inclusion of solar generation into parking lot shade structures could also do a lot to offset the project's energy consumption.

Open Space It is proposed to designate 2675 acres as permanent open space, but it's not clear what kinds of uses will be allowed in these areas. Will they include various recreational functions (eg golf course and equestrian areas?) or maintained kept as natural habitat? How are current and proposed vineyard areas calculated, and "managed grazing" areas?

Traffic. Both construction and operations are certain to have major impacts on traffic which are almost certain to extend beyond the immediate vicinity of Middletown and likely to be significant on the stretch of Highway 29 that crosses Mt St Helena. This segment appears to be at or near carrying capacity already, especially during commute hours.

The Sierra Club also concurs with the Redbud Audubon Society about the necessity of addressing both climate change and wildlife connectivity in the upcoming EIR.

Please keep us advised of any future opportunities to participate in the dialog about this project.

Sincerely,

Victoria Brandon
Conservation Chair, Sierra Club Lake Group

MAY 20 2019

LAKE COUNTY COMMUNITY
DEVELOPMENT DEPT

May 20, 2019

Lake County community Development Department
255 North Forbes Street
Lakeport, CA 95453

Attn: Mark Roberts, Senior Planner

As Conservation Chair for the Redbud Audubon Society I'm requesting issues to be addressed in the Environmental Impact Report (EIR) that is being prepared for the Guenoc Valley Mixed Use-Planned Development.

Issues that need to be addressed along with those already mentioned in the scoping document include Habitat Corridors to ensure wildlife habitat connectivity. This issue is becoming a major concern as more of our wildlands are being fenced and developed. Habitat connectivity for wildlife passage is a must to consider in this scoping document. This will require establishing a data base of current wildlife passages.

At the scoping meeting held on May 15 it was discussed that the residential units will be on 5 acres parcels. This is one of the worst scenarios for development to ensure habitat connectivity. Numerous fenced off five acre parcels will block wildlife passage and simply leaving it up to the residents to encourage wildlife is not adequate. Many people do not want deer in their yards. More clustered housing with larger areas of open space makes more sense. This sounds like a development of high end ranchettes which is not a conservation friendly approach to development. I'm wondering if you are familiar with the work of Christopher Duerksen who has written several books on creating Nature-friendly communities. I'm a little surprised that after seven years of work planners are still looking at ranchette style development. The developer is asking residents of Lake County to accept the creation of a new town; if we are to do so, every effort must be made to create a nature-friendly community.

I did not see any mention of Night Sky friendly development. As you know, our Lake County Board of Supervisors recently approved a Resolution in support of lighting ordinances consistent with Dark Sky Certification as a Dark Sky Community for the county. Please address this in the EIR.

Another issue is climate change. What energy use will be required and carbon dioxide releases occur not only in the building and maintaining of this project, but its continued existence. If the EIR is to go out many years, the review of Climate Change is a must; especially considering that new laws and requirements may be established as time goes on. I was at the May 15 meeting so I learned that solar energy is part of the plan, but I still want the specific issue of climate change addressed.

I have a question about the use of animals for vegetation control. This sounds like a great idea and of course is better that herbicides, but how much thought has been given to the care of these herds of animals when it comes to predators? How will the coyotes, cougars and bobcats be kept from attacking the sheep and goats? Also, grazing animals pretty much eat anything, not just what we want them to eat. Has a survey of Native California Bunch grasses been conducted? It seems that much of this territory would be conducive to this type of vegetation.

Requiring only 2,000 plus acres of guaranteed open space is a small requirement for a total acreage of 16,000 acres. Please review this as well.

Sincerely
Roberta Lyons
Conservation Chair, Redbud Audubon Society

Please continue to send all communication to: roberta.lyons@att.net.

Subject: Comment on Guenoc Development

Dear Michalyn,

As with many of the people I have talked to, we at *Lake County Rural Arts Initiative* are also concerned that the EIR for the Guenoc Valley Development Project does not address the Dark Skies Initiative in Lake County. It is becoming, and will continue to become, a unique attraction for our county. There are "best practices" to mitigate light pollution that I'm sure can be found and applied.

As you may know, LCRAI is working to make/support Lake County an *art destination* that can accelerate our economic success while also preserving what we love about the county. Our hope is that all the developments will engage in supporting our genuine and amazing LC arts & culture (as it also supports their tourism or relocation goals too) as well as our other attractions like Dark Skies. Has any discussion/planning happened with the Guenoc Valley project as to this topic?

Please let me know....
Thank you

Martha

Subject: Notice of Preperation of an Environmental Impact Report for the proposed Guenoc Valley Mixed-Use Planned Development Project
MTR THPD File No. 19-04-023

Dear Ms. DelValle:

The Middletown Rancheria ("Tribe") is in receipt of your notification dated April 23, 2019 regarding the above referenced matter. The Project site and its surrounding landscape have since time immemorial been considered a site of cultural, historical, and religious significance for the Tribe. The Tribe is aware of and concerned about significant cultural and sacred resources that, while known to the Tribe, may not be properly identified through record and survey searches. Moreover, the potential for cumulative impacts to tribal cultural resources must be adequately assessed.

Due to the high likelihood of disturbing tribal cultural resources which include, but is not limited to, Native American human remains, funerary objects, items or artifacts, sites, features, places, landscapes or objects with cultural values to the Tribe, during the Project, the Middletown Rancheria is requesting to be an active participant in all aspects of the Project and development of the Environmental Impact Report (EIR).

We request that all notices and documents be mailed or personally delivered to the Tribe with an electronic copy provided, as early as possible to allow the Tribe adequate time to provide information and to facilitate meaningful consultation to ensure protection and mitigation of tribal cultural resources.

This correspondence is without prejudice to any rights and remedies of the Tribe, all of which are expressly reserved.

We appreciate your time and consideration on this matter. Please contact as soon as possible to discuss next steps.

Thank you.

Subject: Notice of Preparation of an EIR for the proposed Guenoc Valley Mixed Use-Planned Development
Importance: High

Hello Tribal Members,

This email is in regards to the Notice of Preparation of an Environmental Impact Report (EIR) for the proposed Guenoc Valley Mixed Use-Planned Development. The above attachment is a detailed Notice of Preparation Packet regarding the proposed use for you to review and provide the necessary comments. Please keep in mind, the commenting period is from April 23, 2019 through May 23, 2019. If you have any questions, please let me know.

Sincerely,

Mark Roberts – Senior Planner

Lake County – Community Development Department

Attachment A MAHA Guenoc Valley Oak Preservation Plan

1.0 INTRODUCTION

The Guenoc Valley District (GVD) is a proposed rezoning and planned development project located in southern Lake County within an approximately 16,000-acre boundary (Guenoc Valley Site), (**Figure 1** and **Figure 2**). The first phase of planned development includes luxury resorts and a master-planned residential community to be sited in clusters (Phase 1). The GVD incorporates low impact designs that prioritize large residential parcels with low density and clustered development, preserving surrounding open space and agricultural cultivation. The plan to develop a portion of the GVD will be accompanied by this Oak Mitigation Plan.

This Oak Mitigation Plan (Plan) addresses development for both Phase 1, which is under project-level environmental review, as well development of future phases, which are under programmatic-level review in the same EIR (Proposed Project). This Plan addresses the impacts to oaks resulting from the Proposed Project as analyzed in the EIR, defines specific impacts in the Phase One development, and outlines a system of impact identification and mitigation that can be applied consistently to all phases of development. Therefore, mitigation measures applied in Phase One as they relate to oaks will also apply to future phases.

A portion of the Guenoc Valley Ranch was evaluated for environmental impacts related to planned water diversion and use of surface water for land conversion to vineyard. The appropriation and use of water and conversion of land to vineyard was approved by the State Water Board based on an EIR completed in March of 2009 (AES, 2009; FEIR). Development of these approved acreages is still in progress. An Oak Tree Replacement Plan was completed in September of 2008 to mitigate for impacts to oaks within the Places of Use (POUs), where surface water was approved for use, identified in the 2009 FEIR (AES, 2008). The previous Oak Mitigation Plan continues to apply to the development of vineyards and use of water approved under the 2009 EIR.

1.1 PROJECT LOCATION

The Guenoc Valley Site is located approximately three miles east of the town of Middletown and is accessible via Butts Canyon Road (**Figure 1** and **Figure 2**). Long Valley and Coyote Valley occur to the west of the Ranch, and the Cedars Mountains occur to the north. Terrain varies from areas of level valley to areas of steep, rocky terrain. Several vegetative communities exist within the Ranch including; agriculture, annual grassland, oak woodland, pine-oak woodland, cypress forest, mixed conifer forest, and chaparral. Aquatic habitats include ephemeral drainages, perennial streams, seasonal wetlands, groundwater seeps, freshwater marsh, and manmade ponds and reservoirs. Climate of the area consists of hot dry summers and cool, moist winters. Annual precipitation averages approximately 44.1 inches, with zero to insignificant snowfall (WRCC, 2016).

1.2 EXISTING USES

The current land uses within the Guenoc Valley Site are a mixture of agriculture, recreation, and open space. These land uses utilize existing water rights, which allow for irrigated pastures, dry land grazing and open space, vineyards, golf courses, and water bodies (reservoirs). The main reservoirs on the Guenoc Valley Site and connected reservoirs provide approximately 10,390 acre feet of water storage. The agricultural activities include cattle and sheep grazing and vineyards.

Figure 2
Site and Vicinity

The Guenoc Valley Site is currently farmed with 990 acres of vineyards, and an additional 970 acres of vineyard is anticipated and allowed pursuant to previous entitlements. The entitlement for water appropriation for use in vineyard irrigation, and the cultivation of land to vineyard was authorized by the Division of Water Rights following the Guenoc Ranch Water Rights Final EIR (AES, 2009). No additional vineyard area is proposed with the GVD or Phase 1, and approximately 1,700 acres of previously-approved vineyard will be placed under an Agricultural Preserve Combing Zoning district. Impacts to oaks resulting from the planting of the existing and expanded vineyards were mitigated for through provisions in the 2009 Water Rights FEIR (AES, 2009).

1.3 PROJECT DESCRIPTION

Development plans for Phase 1 are comprised of multiple resort communities including residential parcels, boutique hotels, an equestrian center, golf course, and other recreational attractions and associated roadways and supporting facilities. The Phase 1 would result in the development of the following six resort communities described in the Specific Plan of Development (SPOD; MAHA, 2019):

1. Equestrian Center Community - This community includes a clubhouse, stables, paddocks, manmade lake, and several riding arenas and polo fields. Residential parcels will also be located within this community.
2. Maha Farm Community - This community is designed around the existing agricultural history of the Ranch by establishing residential parcels with potential for vineyard or other agricultural development. Maha Farms also includes sales centers, a hotel, wineries, barns, and other supporting infrastructure.
3. Red Hills Estates Community - This community includes the Red Hill hotel, residential parcels, and an 18-hole golf course with clubhouse.
4. Bohn Ridge Resort Community - This community consists of the Bohn Ridge hotel and surrounding residential parcels.
5. Spa Community - This community consists of a few residential parcels, a walking path, and the main spa building.
6. Resort at Trout Flat Community - This community includes residential parcels, resort cottages, and a hotel.
7. Camping Area: This area includes semi-permanent tent structures to provide short-term guests with high-end “glamping” recreational opportunities that are set back from the larger resort communities.

These communities plus supporting infrastructure and workforce housing are included within the Proposed Project. Phase 1 of the Proposed Project will result in multiple hotels, resort residential units near hotels, residential estate villa units, short term staff hotel rooms, campsites, and workforce housing units (i.e. bedrooms). Future phases and the approval of the GVD anticipates up additional hotel units, resort residential units, residential estate units, and additional supporting workforce housing units/bedrooms. A map outlining the different resort communities shown with identified oak habitat impacts is presented in **Attachment A**. Future phases of development are anticipated to include additional hotel units, resort residential units, residential estate units, and supporting workforce housing units. All phases and all aspects of development will occur entirely within Lake County.

2.0 IMPACTS TO OAKS

Oak woodland habitat is a unique component of California's natural heritage. Oak trees serve several important ecological functions including temperature moderation, reduction of soil erosion, facilitation of nutrient cycling, and maintenance of water quality. Oak woodlands also have inherent aesthetic value, are a characteristic feature of the state, and have cultural significance to Native Americans. In addition, oak woodlands provide essential habitat and/or food for many wildlife species including insects, invertebrates, amphibians, reptiles, birds, and mammals.

2.1 IMPACT MINIMIZATION MEASURES

Minimization measures are included as part of the project design where possible in order to minimize oak impacts. Minimization measures include maximum avoidance of oak woodland and individual oaks, maximum avoidance of sensitive habitat that supports oaks and oak dispersal, and incorporation of oaks into landscape design.

Following the sale of a residential lot, a development plan for that lot will follow the general outline described below:

- Residential lots larger than two acres that are entirely within oak woodland habitat will be restricted to a one-acre maximum buildable area. This buildable area is designed to provide footprint size and location guidance to avoid impacts to oaks within residential lots.
- For residential lots in which a significant impact to canopy cover is unavoidable, the impact will be analyzed for the grading, driveways, and building areas, not to exceed 1.5 acres. Mitigation for this type of impact will occur through recordation of same-species oak woodland in long term preservation prior to the issuance of building or grading permits.
- For impacts in which cover is sparse, or significant woodland impacts can be avoided, an exact tree removal and size inventory will be required prior to a building or grading permit. The mitigation will include transplanting, compensatory planting, and/or enhancement as described below.
- These methods will be applied to residential lots developed as a result of either Phase 1 or future phases of development.

In addition to the general impact minimization measures, development of commercial lots has followed the general outline below:

- The footprint of development was reduced to only that area required for the function and design of a commercial lot.
- Placement of structures maximized avoidance oak woodlands.
- Individual oaks will be preserved or transplanted through intentional landscaping or design.
- For commercial lots in which a significant impact to canopy cover is anticipated, the impact will be analyzed for as the greatest maximum potential impact and mitigated through oak woodland preservation prior to impacts.
- For impacts in which cover is sparse, or significant woodland impacts can be avoided, an exact tree count and size inventory will be required followed by mitigation through transplanting, compensatory planting, and/or enhancement as described below.

2.2 OAK IMPACTS BY HABITAT TYPES

Approximately 4,278.2 acres of the Guenoc Valley Site has been identified as oak woodland, with an additional 1,238.7 acres of oak savannah, and 174.9 acres of mixed-oak woodland. **Table 1** provides a summary breakdown of oak habitats impacted by Phase 1.

Infrastructure impacts were calculated based on linear impact features such as roadways along with a thirty-foot grading buffer on each side. Acreages were calculated for illustrative purposes to show the scale of potential impacts. Because of the ability to design around specific oak trees, roadway impacts will be addressed on a tree-by-tree basis. Maximum potential impacts for residential lots are based on the 1.5-acre allowable development area set by the GVD for a given parcel and a 1.0-acre lot development restriction on a parcel that lies entirely within oak woodland habitat, which will be recorded with the parcel's final map. Maximum potential impacts for commercial lots are based on the maximum development footprint as proposed in the Specific Plan of Development (SPOD) for the intended use of the lot positioned to minimize potential impacts to oaks and includes the building footprint as well as the grading extent area.

Vegetative cover in oak savanna habitat is typically dominated by non-native annual grasses with interspersed individual oaks. An Oak savanna is approximately 60% or less total canopy cover and with less than 2/3 of the canopies touching (WRA, 2020a; WRA 2020b). Oak savanna impacts described in **Table 1** are based on the total acreage of oak savanna rather than representative acreage based on percent cover of oaks. Similar to roadway impacts, because of the low density of trees and the ability to avoid them, oak savanna impacts will be measured on a tree-by-tree basis for the purpose of mitigation.

TABLE 1
OAK HABITAT TYPES AND POTENTIAL PHASE 1 IMPACTS BY ACREAGE

Habitat Type	Acres on Guenoc Valley Site	Maximum Roadway Impacts	Maximum Residential Impacts	Maximum Commercial Impacts	Maximum Potential Impacts
Interior Live Oak Woodland	756.5	19.0	31.0	22.0	72.0
Valley Oak Woodland	49.3	1.0	0.0	1.0	2.0
Blue Oak Woodland	3,472.4	91.0	97.0	69.0	257.0
Mixed Oak Woodland	174.9	0.0	0.0	0.0	0.0
Total Oak Woodland	**4,453.1**	**111.0**	**128.0**	**92.0**	**331.0**
Blue Oak Savanna	1,238.7	50.0	52.0	44.0	146.0
Total	**5,691.8**	**161.0**	**180.0**	**136.0**	**477.0**
Source: WRA, 2020a; WRA 2020b; **Attachment A**					

Oak Woodland

The project site contains interior live oak woodland, valley oak woodland, blue oak woodland, and mixed oak woodland. This habitat type was identified in a Biological Resource Analysis performed by WRA Inc. (BRA; WRA, 2019). Oak habitat identified was overlaid on a georeferenced map of the Phase One development in order to determine potential impacts. Identification of oak woodland impacts from future development phases will be performed in a similar fashion. A maximum of approximately 220 acres (**Table 1**) of oak woodland habitat has the potential to be impacted by residential and commercial development. Potential impacts from future development will be assessed in a similar fashion. Roadway impacts of approximately 111 acres of oak woodland along 7.5 miles of roadway will be

defined through tree counts as specified in detail in **Section 3.0** as impacts to individual oaks may be avoided.

Blue Oak Savanna

The project site includes 1,215 acres of blue oak savannah where oak trees occur, but in lower density than in oak woodlands. This habitat type was identified by areas of low-density oak presence interspersed within a grasslands-type setting that was verified through aerial imagery, biological surveys, and GIS mapping overlaid with the development footprint. Specifically, an oak savanna is identified as 60% or less total canopy cover and with less than 2/3 of the canopies touching (WRA, 2020a; WRA, 2020b). Identification of oak savannah impacts from future development phases will be performed in a similar fashion. The Proposed Project has the potential to impact up to 96 acres of oak savanna within commercial and residential development as well as approximately 50 acres of oak savanna along 4.5 miles of roadway. However, the majority of this habitat type is dominated by herbaceous cover and the impacts to individual oaks may be avoided. Therefore, impacts to oak savanna will be defined through tree counts as specified in **Section 3.0**.

Mixed Oak Woodland

The project site includes 175 acres of mixed oak woodland. Mixed oak woodland is comprised of multiple co-dominate oak species and, in some cases, non-oak species. This habitat type was identified by areas with mixed oak species interspersed within a larger canopy co-dominated by other tree species. Mixed oak habitat mapping was verified through aerial imagery, biological surveys, and GIS mapping overlaid with the development footprint. There are no anticipated impacts to mixed oak woodland during Phase 1 of construction. Potential impacts from future development will be assessed in a similar fashion. Depending on the canopy cover of sensitive oaks within mixed oak woodlands, potential impacts may be measured based on acreage or on a tree-by-tree basis.

Oaks Occurring Outside of Mapped Oak Habitat

Because of the continuous nature of habitat types on the Ranch, it is likely that the Proposed Project will result in impacts to individual oak trees present within habitat types for which they are not a dominant species. Individual oaks, specifically blue oaks, have occasionally been observed on the project site within other habitat types such as foothill pine woodland. While an acreage cannot be assigned to oaks potentially occurring throughout the project site, these impacts are to be mitigated for on a tree-by-tree basis as defined in **Section 3.0**.

3.0 PROPOSED OAK MITIGATION PLAN

3.1 MITIGATION GOALS AND OBJECTIVES

Oak habitat on site will be avoided to the maximum extent possible to preserve the aesthetic, ecological, and cultural benefits provided by oaks. Acreages calculated in **Table 1** are based on the reduced impacts as a result of avoidance measures outlined in **Section 2.1**.

The goal of this Plan is to replace the function and value of impacted oak habitat as a result of the Proposed Project. The impacts from the Proposed Project will be fully mitigated in compliance with the 2009 Water Rights EIR, 2008 Oak Tree Replacement Plan, and Lake County General Plan. Success metrics will be utilized to meet mitigation criteria and ensure long-term success of the oak mitigation. Proposed mitigation is comprised of protecting existing oak woodlands as possible and creating or enhancing habitat in suitable locations. These mitigation methods are described in detail below.

3.2 OAK MITIGATION RECOMMENDATIONS BY IMPACT TYPE

As described in **Section 2.1**, the Proposed Project has the potential to impact oak woodland, oak savanna, and individual oak trees. Impacts to these habitat types can be further described by the level of impact. Therefore, mitigation is best determined through an analysis of the habitat types and the level of impact. **Table 2** provides a mitigation matrix summary following the methods described below.

Impacts to Oak Woodland with Significant Loss of Canopy Cover

While impact minimization measures have been incorporated as part of the Proposed Project (**Section 2.1**), the Proposed Project has the potential to impact oak woodland such that a significant loss of canopy cover may occur. In this circumstance, suitable mitigation will occur through preservation of in-kind habitat at a ratio of 1.5 acres preserved to 1 acre of impacts. These methods apply to residential and commercial lot development for which a qualified biologist has determined that a significant loss of cover has occurred. This method of mitigation is suitable for Phase One and future phases of development.

Impacts to Oak Woodland without Significant Loss of Canopy Cover

Due to impact minimization measures presented in **Section 2.1**, the Proposed Project will likely have impacts on individual oak trees within oak woodland habitat such that the overall character and quality of the habitat is not significantly impacted. Consistent with the Biological Resources Assessment of the Guenoc Valley Site, impacts that result in a reduction in woodland canopy cover to 60 percent or less and less than 2/3 of the canopies touching would be considered conversion of habitat from oak woodland to oak savanna. In circumstances where removal of trees does not convert oak woodland to oak savanna, the following mitigation is recommended:

- For oaks removed with a diameter at breast height (dbh) between 3 inches and 15 inches, full transplant or replanting at a 2:1 ratio as detailed in **Section 4.0**.
- For oaks removed with a diameter at breast height of 15 inches or greater, transplantation or replanting at a 5:1 ratio as detailed in **Section 4.0**.
- For oaks that are transplanted, they will be monitored for the success of transplanting as described under **Section 5.0** and replaced via replanting ratios described above should the transplanting fail.
- Locations of removed oaks will be documented such that oaks removed within a POU will result in compensatory plantings within POU consistent with the 2009 Water Rights EIR. The Phase I of the GVD proposes approximately 32 acres of potential impact to oaks within the POU, which will be mitigated in accordance with the 2009 Water Rights EIR requirement for like compensation within POU. In addition to this existing requirement, the 32 acres will also comply with this 2020 GVD Oak Mitigation plan as described in the below table with a preservation of similar oak woodland at a ratio of preservation of 1.5 acres to 1.0 acres of impact, which may occur outside of the previously defined POU, but within the Guenoc Valley Site.

These methods apply to oaks impacted by infrastructure and fire-protection vegetation management. These methods also apply to residential and commercial lot development for which a qualified biologist has determined that a significant loss of cover has not occurred. This method of mitigation is suitable for Phase 1 and future phases of development.

TABLE 2
SUMMARY MATRIX OF RECOMMENDED OAK MITIGATION

Habitat Type	Habitat Impact Type	Mitigation Recommended
Interior Live Oak Woodland	Significant loss of oak canopy cover	Preservation of interior live oak woodland at a 1.5:1 ratio
	No significant loss of canopy cover	Exact tree count followed by replanting interior live oak at the following ratios: ▪ 2:1 for dbh 3”-15” ▪ 5:1 for dbh < 15” Transplanted trees that fail are subject to these replanting ratios.
Valley Oak Woodland	Significant loss of oak canopy cover	Preservation of valley oak woodland at a 1.5:1 ratio
	No significant loss of canopy cover	Exact tree count followed by replanting of valley oak at the following ratios: ▪ 2:1 for dbh 3”-15” ▪ 5:1 for dbh < 15” Transplanted trees that fail are subject to these replanting ratios.
Blue Oak Woodland	Significant loss of oak canopy cover	Preservation of blue oak woodland at a 1.5:1 ratio
	No significant loss of canopy cover	Exact tree count followed by replanting of blue oak at the following ratios: ▪ 2:1 for dbh 3”-15” ▪ 5:1 for dbh < 15” Transplanted trees that fail are subject to these replanting ratios.
Mixed Oak Woodland	Significant loss of oak canopy cover	Preservation of mixed oak woodland at a 1.5:1 ratio
	No significant loss of canopy cover	Exact tree count followed by replanting mixed oak at the following ratios: ▪ 2:1 for dbh 3”-15” ▪ 5:1 for dbh < 15” Transplanted trees that fail are subject to these replanting ratios.
Blue Oak Savanna	Any impact	Exact tree count followed by replanting blue oak at the following ratios: ▪ 2:1 for dbh 3”-15” ▪ 5:1 for dbh < 15” Transplanted trees that fail are subject to these replanting ratios.
Individual Oak	Any impact	Exact tree count followed by replanting in-kind oak at the following ratios: ▪ 2:1 for dbh 3”-15” ▪ 5:1 for dbh < 15” Transplanted trees that fail are subject to these replanting ratios.

Impacts to Oak Savanna

Impacts to oak savanna will be handled in the same manner as impacts to oak woodland without significant loss of canopy cover. This method of mitigation is suitable for Phase One and future phases of development.

Impacts to Individual Oaks

Impacts to oaks that occur outside of habitat mapped as oak woodland or oak savanna will be handled in the same manner as impacts to oak woodland without significant loss of canopy cover. This method of mitigation is suitable for Phase One and future phases of development.

4.0 OAK MITIGATION

Detailed tree counts will be maintained as necessary in order to ensure full mitigation within the appropriate area of the Guenoc Valley Site.

4.1 OAK WOODLAND PRESERVATION

A significant portion of oak woodland within the development area is avoided through residential development restriction or project design. The area of potential oak woodland preservation was identified based on the type and quality of habitat impacted by the Proposed Project. **Attachment A** shows potential oak impacts resulting from Phase 1 and illustrates the existing and proposed preservation areas under Phase 1. Of the oak preservation presented in **Attachment A**, a total of 464 acres are preserved within Lake County and located within the POU pursuant to the 2009 Guenoc Valley Water Rights FEIR (AES, 2009). In addition to the 464 acres of oak woodlands required to be preserved within Lake County and located within the POU, 853 acres of oak woodlands are in long term preservation within the Preserved Open Space Area, which will be in long-term management, for a total of 1,317 acres of existing preserved oak woodlands. Additionally, based on a preservation ratio of 1.5 acres to 1 acre impacted, additional acres of oak woodland would be preserved through restrictions on residential lot development and avoidance of woodland within commercial lots. The total area of existing and proposed oak preservation within the Guenoc Valley Site following Phase 1 development would be 1,633 acres. **Table 3** shows a summary of proposed oak preservation areas related to Phase 1 impacts.

TABLE 3
PHASE 1 MAXIMUM OAK WOODLAND PRESERVATION REQUIREMENTS FOLLOWING IMPACT MINIMIZATION

Habitat Type	Maximum Acres of Significant Cover Loss	Maximum Acres Required for 1.5:1 Preservation
Interior Live Oak	53	80
Valley Oak	1	1.5
Blue Oak	166	249
Mixed Oak	0	0
Total	**220**	**331**

Acres of oak woodland preservation will be protected prior to the issuance of a building or grading permit of a commercial property or the recordation of the final map prior to the sale of a residential parcel. This Oak Mitigation Plan will serve as an agreement between the property-holder of the Guenoc Valley Site and Lake County, restricting future development on the identified oak woodland preservation areas. Any future modification of such preservation areas would require additional identification of oak preservation such that acreage of preserved oak woodland by species is not lost. Since these

conservation areas will be filed as a deed restriction and recorded as a development restriction on the title, a formal conservation easement filed with Lake County is not necessary.

4.2 OAK TREE PLANTING

Because exact tree counts are dependent upon final development plans, this section serves to outline a method for determining suitable oak planting locations. Suitable oak habitat replacement or preservation should be of similar quality to support successful oak establishment.

Additionally, locations for mitigation plantings should consider practicality of planting and maintenance based on the location. Oaks may be planted in suitable habitat where oaks to not substantially occur, or where cover is low. These locations also considered surrounding land use and targeted those areas most likely to be preserved throughout all phases of development. Potential locations were selected for plantings based on suitable supporting habitat, continuity of the landscape, and other metrics that would increase the success and functionality of mitigation plantings. Selection also considered the accessibility of the location for the purpose of planting, maintenance, and monitoring. Habitat of similar quality and practicality for mitigation plantings may be utilized.

A qualified biologist will confirm the tree removal count and the required number of compensatory plantings for a development area. Tree counts and planting locations will be carefully documented in order to ensure compliance with this Plan. Oak plantings will be initiated no later than the suitable planting season following oak removal for which a parcel or area of development has been impacted. Oak seedlings will be planted with the intent of replacing not only the trees themselves, but restoring the functionality of the habitat impacted by the Proposed Project.

Source and Size of Mitigation Plantings

Oak planting required for mitigation may be obtained from a variety of sources. An on-site nursery currently produces seedlings from acorns collected on site and could be used to provide for a portion of plantings. Direct plantings of acorns and seedlings collected on site may also occur. Each individual oak planting, whether it be sourced from the nursery or planted directly, will count as one individual for the sake of tree replacement mitigation ratios, and subject to the monitoring requirements outlined in **Section 5.0**. Should needs exceed the on-site production of acorns and seedlings, locally sourced nurseries within 200 miles of the project site may be used to provide seedlings.

Transplanting of Oak Trees

When possible, transplanting of trees removed during development will also be used in oak woodland creation areas. Due to the value of mature trees, preferential selection for transplanting should be given to those trees with a dbh equal to or greater than 15" when possible. If the tree planned to be removed is successfully transplanted, then there is no additional required mitigation. Transplanted trees will be monitored as outlined in **Section 5.0**. Should a transplanted tree fail, replanting as outlined in **Section 2.2** will occur. The following outlines the methods used for transplanting of oaks previously performed on the Guenoc Valley Site to be used for oaks transplanted through construction of the Proposed Project:

- Select tree to be salvaged / transplanted;
- Evaluated current health of selected tree taking into consideration age, vigor, presence of sickness, fungus, pest/disease;

- Evaluate the type and conditions of the soil where the tree is growing (sandy, rocky, clay, etc.). Root pruning and transplant methods will vary based on these conditions;
- Evaluate labor and machinery available to transplant. Size of root ball, root-pruning methodology and system of containerization will vary based on these variables;
- Determine root ball dimensions based on size of tree, conditions of soil, and target final weight of root ball/tree;
- Initiate exploratory digging around root ball perimeter. This exploratory dig will reveal extent of lateral root system and soil profile;
- Once root ball perimeter is determined and marked, initial digging is initiated around all or a portion of the root ball;
- Depending on the species and its root system, often main lateral roots are left intact to a) minimize shock to the tree and b) to maintain tree stability, so it does not fall down;
- Ideally perform initial root ball digging during the dormant season;
- Once the first stage of root ball digging is complete, the ball is wrapped tightly in heavy duty black plastic, or a layer of burlap followed by then black plastic. The purpose of this is to retain humidity within the root ball while reducing direct sunlight on the exposed roots;
- Depending on the tree species, the tree will often be left for a matter of months or even up to a year following the initial root prune. The purpose of this is to allow the tree to recover from the shock of root pruning prior to cutting main lateral roots and lifting the tree;
- During this rest period the tree is regularly monitored for overall health and to ensure adequate moisture, etc.;
- The following stage involves gradual cutting of lateral roots, finalized shaping of the root ball and in many cases, construction of a box or container around the root ball. Very heavy trees will often be lifted from this box;
- Once the tree is containerized, the tree is ready to be lifted. Ideally this will occur during or just prior to a dormant season (typically fall or winter), although this is not always possible;
- Lifting / transplant methods vary from species to species and are also dependent on soil type, proximity of tree to final planting location, and the type of machinery being used to transplant. In the case of blue oaks, a large articulating forklift is used to lift the tree from the bottom of the box. The tree is then transported by the articulating forklift to its designated staging area or final planting location., and
- Following tree extraction and relocation, the tree hole is backfilled, and erosion control measures are implemented.

Planting Specifications

There are several methods to increase the success of direct acorn plantings. The following specifications are to be followed for the collection and direct plantings of acorns:

- Collection of acorns for planting should occur within the same year that tree planting would occur. Acorns are ready to pick from trees when the acorn cap can be easily separated from the acorn without tearing the seed coat.
- If unable to plant acorns immediately, acorn caps should be removed, and acorns will be stored under cool moist conditions until ready to be planted.
- Three to four acorns will be planted two to four inches deep on their side approximately three inches apart in order to maximize the germination success of at least one seedling.
- Organic mulch may be applied after planting, extending to a three to four-foot radius, and to a height of two to three inches over the top of the soil. Water following the planting.

The following planting specifications will be followed to increase the success rate for seedlings and transplanted trees:

- Should needs exceed the production capabilities of the on-site nursery, seedlings are to be sourced from a nursery that is growing trees from locally sourced acorns.
- Organic mulch will be applied after planting, extending to a three to four-foot radius and to a height of two to three inches over the top of the soil. Water following planting.
- Seedlings planted from starter pots are to be planted in holes dug slightly deeper than pot height and twice the width. Holes should be dug by hand when possible with smooth edges loosened to promote root growth.
- Any trees that are staked should be done so such that the straps are loose enough to allow for natural bending and movement of the tree while being tight enough to protect the tree from structurally damaging movements such as high-wind storms. Stakes should be removed following successful establishment.

Oak woodland planting areas should be planted with irregular spacing and clumps of trees to reflect the natural and aesthetic qualities of the existing oak woodlands.

Methods of Irrigation

Irrigation methods will vary based on the locations of the planting sites within the mitigation areas. Some planting sites may not need supplemental irrigation if there is a sufficient source of groundwater. If tree planting takes place during the rainy season, supplemental irrigation is not anticipated to be necessary during the first year. Irrigation methods for mitigation areas planted in the dry season will likely include the installation of temporary drip irrigation systems. Tree plantings will be irrigated in the absence of enough groundwater during the dry season in their first two years of growth in order to promote seedling survival. The plantings should not need to be irrigated during the wet season.

Planting Schedule

Acorn and seedling planting will be conducted between the months November and December, pending availability of seedlings or acorns. Planting during the fall will facilitate establishment of the planted acorns and seedlings during the rainy season. Plantings should begin no later than the first suitable planting season following oak tree removal for the Proposed Project.

Seedling Protection

In areas that have issues with herbivory, seedlings or acorn planting sites will be provided with adequate protection from damage to increase survival rates. These protections usually consist of tree shelters, or small wire mesh cages covering the seedling to reduce the likelihood that deer or other herbivores will consume the young trees. Mesh should be of an appropriate size to prevent entrapment of songbirds.

4.3 Oak Habitat Enhancement

These areas may be used for tree-by-tree mitigation or restoration activities and will follow the specific planting instructions above. Oak habitat enhancement may occur in areas of oak savannah and pine-oak woodland but may include the enhancement of other mixed-oak habitat.

4.4 MITIGATION AREA MAINTENANCE

Maintenance of the mitigation areas will consist of weed removal, removal of trash and litter, inspection of tree shelters and wire mesh, fencing (as needed), irrigation systems, tree stakes, and inspection for evidence of vandalism or other uses conflicting with the goals of this Plan.

Weed Control

Three primary techniques are available for weed control maintenance activities in the oak planting areas: mowing, hand weeding, and herbicide application. Mowing and/or hand weeding are the preferred methods of weed control. If herbicides are used, they will be applied only by licensed personnel in strict accordance with the manufacturer's regulations. No herbicide should contact the leaves or stems of the oak trees. Herbicide use will be as restricted as possible; spot applications are preferred, and extreme care should be taken when applying herbicides in the vicinity of open water, wetlands, existing native vegetation, and revegetation plantings. No weed control is necessary in the oak preservation areas.

Removal of Trash and Litter

Trash and litter, which may blow into the mitigation areas, will be removed periodically. Any trash observed within the mitigation areas during the monitoring visits will be reported and/or removed.

Other Inspections

Planting equipment such as tree shelters, wire mesh, fencing, irrigation systems, or tree stakes if used, will be inspected during quarterly monitoring visits by a qualified biologist described in **Section 5.0** below. Instructions to correct any defects will be included in the biological monitoring reports. Evidence of any uses conflicting with the goals of this tree mitigation plan will be included in the monitoring reports.

Maintenance Schedule

The oak planting mitigation sites will be visited by the Ranch staff at least twice monthly during the first six months to assess the effectiveness of the irrigation system (if applicable) and to inspect any tree shelters, wire mesh, fencing, or tree stakes used. Quarterly visits, as described in **Section 4.3**, will also ensure that plantings and irrigation are functioning as designed. These quarterly visits will be performed by a qualified biologist throughout the remainder of the three-year monitoring period, described further in **Section 5.0** below.

5.0 MONITORING PLAN

5.1 DATA COLLECTION

Mitigation sites will be inspected by a qualified biologist or certified arborist for three years after planting. Monitoring site visits will involve assessing the status of the replacement plantings, determining the need for irrigation, identifying weeds for removal, and assessing the overall integrity and success of the mitigation sites.

Monitoring reports will, at a minimum, include the following metrics of successful oak establishment: survival rates, overall health, dbh of mitigation plantings, and the status of competing woody vegetation. Criteria described below will apply to both Phase 1 and future phases of development.

5.2 SUCCESS CRITERIA

Oak Preservation Areas

The oak preservation areas do not have success criteria. Because the oak preservation areas are ecologically functional oak woodlands, these areas need only to be protected from future development in order to offset the impacts to oak woodlands elsewhere on the property.

Oak Habitat Planting Areas

The oak replanting mitigation will be considered successful when, after three years, the tree plantings have achieved an 80 percent success rate. If additional plantings are necessary to increase the total plantings to meet the 80 percent survival rate, these seedlings will be monitored for a full 3 years to ensure success of those additional plantings. A high level of replanting success is anticipated with the use of protective measures, along with placement of the plantings in appropriate habitat.

Oak Habitat Enhancement Areas

Oak woodland enhancement areas are deemed successful when, after three years, the tree plantings have achieved an 80 percent success rate. If additional plantings are necessary to increase the total plantings to meet the 80 percent survival rate, these seedlings will be monitored for a full 3 years to ensure success of those additional plantings. A high level of replanting success is anticipated with the use of protective measures, along with placement of the plantings in appropriate habitat.

5.3 REPORTING

A qualified biologist or certified arborist will inspect the site during planting to ensure that it is completed in compliance with this plan and to create a baseline of the locations for future inspections. Due to the size of the property, the projected development timeline, and the associated mitigation plan, restoration areas may be broken into Mitigation Units. Each Mitigation Unit will be mapped with an approximate tree count and submitted to Lake County immediately following mitigation plantings. A total of three annual reports will be completed for each Mitigation Unit, with additional reports as necessary until all success criteria are met. Annual reports will include the quarterly report along with an analysis on the projected success of mitigation and any adaptive management recommendations.

The first annual inspection will occur approximately one year after installation and will include a report documenting the results of the monitoring efforts. Annual reports will be submitted to the Lake County within six months of the monitoring event for a total of three years, starting the year following the initial planting. This reporting scheme will be followed such that all mitigation plantings on the Ranch associated with Phase 1 and future phases of development receive a full three years of mitigation monitoring in order to reach success criteria, with additional mitigation and monitoring as needed to meet success criteria. Should adaptive management recommendations and supplemental plantings occur, the annual report will include the notice of new plantings needed to replace failed trees, along with documentation (summary data and photos) to illustrate the condition and location of plantings. The report should include the success of natural revegetation, establishment, survival, and height of replacement tree plantings, and the status of the oak improvement area's competing woody vegetation.

5.4 SCHEDULE

Oak plantings may occur during the appropriate planting season prior to the development of the Proposed Project and must be initiated no more than one planting season following tree removal. The

first annual monitoring of the mitigation sites will be conducted the year following the initial planting, with a total of three yearly monitoring reports.

5.5 Adaptive Management

If trees planted in the mitigation areas are deemed to be performing poorly, a contingency plan may be submitted to Lake County requesting modifications to this Plan. Modifications may only be requested related to the location and management of mitigation plantings and will not result in the reduction of plantings or success criteria described herein.

6.0 COMPLETION OF MITIGATION

Once the minimum three-year monitoring period is completed and success criteria met for all mitigations, Lake County will be informed that the mitigation requirements have been completed. A qualified biologist will prepare the Notice of Completion of mitigation activities and will include the final annual report for each mitigation unit detailing the achievement of success criteria. Therefore, completion of mitigation activities will include the following reports and documentation:

- Mapping submitted to and approved by Lake County detailing all oak woodland preservation locations;
- Mapping submitted to and approved by Lake County detailing potential oak planting locations;
- Maps submitted to Lake County detailing Mitigation Units as they are designated;
- A minimum total of three annual reports for each Mitigation Unit submitted to Lake County;
    - The first annual report will document the specific planting details such as location of plantings, species, number of trees, and other important tracking information.
    - Additional annual reports may be necessary if additional supplemental plantings occur.
    - A request may be sent to Lake County to amend mitigation planting location(s) and monitoring activities based on tree performance and subject to County approval.
- A Notice of Completion of mitigation activities submitted to Lake County; and
- A final site visit with the County, if requested by the County.

Lake County may require a site visit to confirm that the success criteria have been met and that the required mitigation has been completed. The landowner will retain the oak mitigation areas and will not use them in a way that significantly degrades the ecological value of the mitigation area without notice to and approval by the County. With prior notification, the property may be periodically inspected by the County to ensure compliance with this Plan.

6.1 Assurance of Mitigation Permanence

This document will serve as an assurance that the mitigation measures will be performed as described. Any future development of this property within Lake County will be bound to this agreement. Future development on the Ranch in Lake County occupied by oak trees, specifically the areas of oak replanting and oak woodland preservation covered in this document, will require consent from Lake County. The landowner agrees to the mitigation and reporting requirements described in **Sections 3.0**, **4.0**, and **5.0**, and acknowledges that the completion of the mitigation described in **Section 6.0** does not permit the cutting or development of the oak mitigation areas.

Further development or cutting of oaks on this property beyond the Phase 1 and future phases of development plans outlined here would require consent from Lake County and consistency with this

Oak Mitigation Plan. Future development plans would be contingent on the continued protection and upkeep of the oak preservation and oak replanting areas. The applicant consents to not implement any activity on the property that may result in an impact to oak woodland habitat or is inconsistent with this Plan without first consulting with the County. Therefore, modification of development plans not specifically authorized by this Plan will occur only with the understanding and required approvals by Lake County.

1.0 INTRODUCTION

The 2008 Open Space Preservation Plan (2008 OSP) addressed impacts related to the 2009 Water Rights Modification Project within the 24,000-acre Guenoc Valley Ranch (Ranch) (**Figure 1** and **Figure 2**). The Guenoc Valley District (GVD) is a proposed rezoning and planned development project located within the approximately 16,000-acre boundary portion of the Ranch exclusively within Lake County (Guenoc Valley Site). The first phase of development includes luxury resorts and a master-planned residential community to be sited in clusters (Phase 1), and future phases of development would result in similar design within the GVD (Proposed Project). The GVD incorporates low impact designs that prioritize large residential parcels with low density and clustered development, preserving surrounding open space and agricultural cultivation.

This amendment to the 2008 OSP addresses the portion of the Proposed Project that impacts the Open Space Preservation Area. This amendment identifies methods of alternate preservation of acreage, and presents an analysis on habitat quality and sensitivity to ensure that proposed preservation areas satisfy the goals outlined in **Section 2.1**.

1.1 PROJECT LOCATION

The Ranch is located at the border of Lake County and Napa County, CA (**Figure 1** and **Figure 2**). The Study Area consists of the area of impact that falls within the Phase 1 development footprint of the Ranch. Long Valley and Coyote Valley occur to the west of the Ranch, and the Cedar Mountains occur to the north. Terrain varies from areas of level valley to areas of steep, rocky terrain. Several vegetative communities occur within the Ranch including agriculture, annual grassland, oak woodland, pine-oak woodland, cypress forest, mixed conifer forest, and chaparral. Aquatic habitats include ephemeral drainages, perennial streams, seasonal wetlands, groundwater seeps, freshwater marsh, and manmade ponds and reservoirs. Climate of the area consists of hot dry summers and cool, moist winters. Annual precipitation averages approximately 44.1 inches, with zero to insignificant snowfall (WRCC, 2016).

1.2 PROJECT DESCRIPTION

Development plans for Phase 1 of the Proposed Project are comprised of multiple resort communities including residential plots, hotels, an equestrian center, golf course, and other recreational attractions and associated roadways and supporting facilities. The Proposed Project would result in the development of seven resort communities described in the Specific Plan of Development (SPOD; MAHA, 2019), further summarized below.

1. Bohn Ridge Resort Community: This community consists of the Bohn Ridge hotel and surrounding residential parcels.
2. Equestrian Center Community: This community includes a clubhouse, stables, paddocks, manmade lake, and several riding arenas and polo fields. Residential parcels will also be located within this community.
3. Maha Farm Community: This community is designed around the existing agricultural history of the Ranch by establishing residential parcels with potential for vineyard or other agricultural development. Maha Farms also includes sales centers, a hotel, wineries, barns, and other supporting infrastructure.
4. Red Hills Estates Community: This community includes the Red Hill hotel, residential parcels, and an 18-hole golf course with clubhouse.

Figure 2
Site and Vicinity

5. Spa Community: This community consists of a few residential parcels, a walking path, and the main spa building.
6. Resort at Trout Flat Community: This community includes residential parcels, resort cottages, and a hotel.
7. Camping Area: This area includes semi-permanent tent structures to provide short-term guests with high-end "glamping" recreational opportunities that are set back from the larger resort communities.

These communities plus supporting infrastructure and workforce housing are included within the Proposed Project. A map outlining the different resort communities within the project site is included in **Figure 3**. Phase 1 of the Proposed Project will result in multiple hotels, resort residential units adjacent to hotels, residential estate villa units, and workforce housing units. Future phases of development are anticipated to include additional hotel units, resort residential units, residential estate units, and additional supporting workforce housing units. Phase 1 and future phases of development will occur within Lake County.

1.3 PROJECT IMPACTS

Open space and contiguous habitat provide important ecological services to plants and wildlife. Dedicated open space allows for plant and animal dispersion, conservation of ecosystem services, and preservation of high-quality habitat. **Table 1** provides a summary of potential project impacts to the existing OSPP area. The existing open space preservation area is outlined in **Figure 4**. Impacts were calculated based on where proposed development areas overlapped with the existing Open Space shown in **Figure 4**.

Streams	40.66	63.13	22.48
Reservoirs	33.05	1.52	-31.53

1.4 IMPACT MINIMIZATION MEASURES

Because of the ecological and aesthetic significance of open and contiguous habitat, avoidance measures are included where feasible in the project design to minimize impacts to wildlife movement and areas with high densities of sensitive vegetation. These minimization measures include provisions for setbacks along riparian corridors and wetland habitat, buffers around identified special-status plants, maximized avoidance of sensitive habitat types, and construction best management practices. Residential lots will each be subject to biological surveys and a development plan that follows the general outline below:

- Each lot will be evaluated and assigned a maximum 1.5-acre buildable area. This includes restrictions on total lot development areas and/or locations of allowable development within a lot.
- Through the new GVD zoning ordinance, residential lots will be allowed a maximum development footprint. The remainder of the lot that falls outside of a residential lot's development footprint will be non-dedicated open space. Fencing will be minimized.
- All lots are subject to Landscape Improvement Zones for fire management practices.
- Each lot will be evaluated for impacts to oak trees and will be subject to deed restrictions regarding proper avoidance and/ or mitigation for impacts to oaks. This provision maximizes habitat quality of non-dedicated open space by promoting preservation of valuable oak habitat within each lot.

- These methods will be applied to residential lots developed in any phase of development. In addition to the impact minimization and mindful lot development standards listed above, the following practices will also allow for dedicated areas of open space to occur throughout development:
- For fire management purposes, two-lane roads will be maintained with a buffer from the shoulder of open space subject to vegetation management.
- Resort communities have been clustered to reduce the overall development footprint and increase the amount of non-dedicated open space throughout the Ranch.
- The Proposed Project does not result in the development of land within the Napa County portion of the Ranch.
- Avoidance of natural corridors such as creek setbacks outside of designated open space will be maximized.

Incorporation of the above practices will preserve not only a single large and contiguous core of acreage, but also numerous patches of deed-restricted and undesignated open space scattered throughout the Ranch. These impact minimization measures will be implemented for all phases of development. By doing so, this OSPP amendment provides a significant land dedication through the development in perpetuity, as well as a patchwork of open habitat to further maintain the aesthetics and functionality of the environment. This network of dedications further protects sensitive vegetation, provides additional refugia for wildlife, and provides developmental relief for ecosystem functions such as groundwater recharge.

2.0 EXISTING OPEN SPACE PRESERVATION PLAN

2.1 GOALS AND OBJECTIVES

A map showing the existing open space preservation area on the Ranch is shown in **Figure 4**. The existing Open Space Preservation Plan was designed to prioritize the protection of sensitive biotic communities and habitats for special-status species, establish viable movement corridors for animals and plant dispersal, and promote overall natural biodiversity on the Ranch. General goals of the 2008 OSP and this Plan are defined by the following metrics:

- Conserve high biodiversity by protecting a diversity of biotic communities and preferentially conserve sensitive biotic communities in the OSPP areas;
- Conserve habitats known or likely to be occupied by threatened and endangered species in OSPP areas;
- Conserve viable wildlife movement areas through terrestrial and riparian corridors across the Ranch, thereby maintaining connections to the regional landscape for the long-term health of OSPP areas;
- Preclude the degradation of the existing natural resources in the designated OSPP areas; and
- Develop site-specific adaptive management plans to monitor and manage significant threats (e.g., detrimental exotic species invasions, illegal dumping) that degrade the habitat quality of the OSPP areas relative to their baseline status.

The 2009 Water Rights EIR resulted in 2,765 acres of mitigated POU within the Ranch. This required a 2,765-acre open space preservation area to be established (**Figure 4**). The open space area was not designed as a functional wildlife corridor, but as a continuous open space that captured portions of existing natural corridors. While the open space area is not defined as a wildlife corridor, its continuity

through the Ranch may allow for wildlife movement through and within the Ranch. **Section 2.3** lists those activities that are permissible within dedicated open space.

2.2 Existing Open Space Preservation Location

At the time of the approval of the 2009 FEIR water rights application, a total of 2,765 acres of potential designated open space were identified in the 2008 OSP (**Figure 4**). Acreage was identified at a 1:1 impact ratio, and bisects the Lake County portion of the Ranch in a net northeasterly direction. The existing open space preservation area was selected based on biological surveys that identified serpentine soils, rare plant communities, riparian habitat, and other biologically significant features within the Ranch.

The existing open space area begins on a large piece of land at the Lake County/Napa County border, directly north and adjacent to Butts Canyon Road. The open space area then runs as a strip of open space northeasterly until reaching Bucksnort Creek. The open space then follows Bucksnort Creek until the northern extent of the property. The majority (94.0 percent) of the existing open space area is retained in the proposed open space area.

2.3 Adaptive Management Provisions

The following approved activities occur under the 2008 OSP and are also considered allowable through this Plan:

- The maintenance, repair, replacement, expansion, and use of existing groundwater wells and other irrigation improvements within the Open Space Preservation area, and the construction of new water sources, including the drilling of additional wells and the construction or siting of water storage improvements, fixtures, and pipelines for water and utilities;
- The construction, maintenance, repair, and use of roads within the Open Space Preservation area; and
- Ongoing grazing or other currently approved agricultural operations or existing recreational uses including hunting and fishing.

The 2008 OSP and this Plan additionally allow for modifications of the boundaries presented in **Figure 4** for approved activities on the Ranch, provided that acreage removed from the existing open space be replaced contiguous to the remaining open space at a 1:1 ratio such that the goals and objectives of the 2008 OSP remain fulfilled. Should the EIR for the Proposed Project described in **Section 1.2** be approved, the following outlines a proposed modified open space that retains the required acreage and replaces impacted acreage in compliance with the 2008 OSP.

3.0 PROPOSED OPEN SPACE PRESERVATION AMENDMENT

Development of the Proposed Project would impact areas of open space as described in the 2008 OSP (**Table 1**). A map showing the proposed open space preservation area compared with the existing open space preservation area is shown in **Figure 5**. The development area of the Proposed Project and the POU on the Ranch are also included to illustrate those areas not eligible for inclusion within the open space preservation area. A habitat map of those features captured by the proposed open space is included as **Figure 6**. Lot lines of the Proposed Project are included within **Figure 6**. The following outlines the quality and characteristics of habitat selected for preservation as it relates to the OSPP goals.

Figure 6
Habitat Types Within Open Space Preservation Area

3.1 ACREAGE SUBJECT TO REPLACEMENT FROM OPEN SPACE

Development of the Proposed Project would result in the removal of approximately 165 acres from the existing open space area. Removal of open space is the result of conflicts with lot lines; impacts to open space from covered activities such as road construction; and the preferential removal of well-represented habitat within existing open space in exchange for habitat of greater quality, functionality, or of lacking representation within the open space. While residential lots Residential lots range from 2-20 acres with a 1.5 acre maximum building envelop per residential lot. Impacts to the existing Open Space Preservation Area are defined as those areas where lot lines overlap with the existing Open Space Preservation Area. Habitat types present within this impacted and are presented in **Table 2** and consist of blue oak woodland, chamise chaparral, deer weed scrub, interior live oak woodland, leather oak chaparral, whiteleaf manzanita chaparral, and ponds and reservoirs. Removal of these acres does not result in the complete removal of special-status plants, sensitive habitat, or natural corridors included in the original open space plan. Developed habitat (roadways) does not count towards the 2,765 acre requirement.

TABLE 2
HABITAT SUMMARY OF ACREAGE TO BE REMOVED FROM OPEN SPACE

Habitat Type	Acreage Removed from Open Space
Blue oak woodland	21.81
Chamise chaparral	15.48
Deer weed scrub	0.51
Developed	5.91
Interior live oak woodland	9.16
Leather oak chaparral	68.15
Whiteleaf manzanita chaparral	13.46
Ponds and reservoirs	31.53

3.2 ACREAGE SUBJECT TO INCLUSION INTO OPEN SPACE

In order to offset the 165 acres of impacted open space, newly designated open space has been proposed and identified in **Figure 5** and **Figure 6**. Habitat types present within this area are described in **Table 3** and include blue oak savanna, foothill pine woodland, non-native annual grasslands, rock outcrop, valley oak woodland, white alder grove, wetlands, and streams. Inclusion of this acreage would result in 2,765 acres within the designated open space preservation area.

TABLE 3
HABITAT SUMMARY OF ACREAGE TO BE ADDED IN OPEN SPACE

Habitat Type	Acreage Added to Open Space
Blue oak savanna	27.97
Foothill pine woodland	43.39
Non-native annual grasslands	30.42
Rock outcrop	3.19
Valley oak woodland	9.78
White alder grove	3.80
Wetlands	14.54
Streams	22.48

Section 3.2.1 through **Section 3.2.4** describe in detail the qualifying characteristics that make this acreage suitable for inclusion in the OSPP. Habitat was selected to satisfy the goals and requirements outlined in **Section 2.1**. A large portion of the inclusion runs along the northeastern extent of Bucksnort Creek, a perennial stream that is a tributary to Putah Creek. The secondary inclusion of habitat into the open space plan widens and smooths the strips of land that connect the southern extent of open space up to Bucksnort Creek and other stretches along Bucksnort Creek where additional surveys have revealed sensitive habitat or special-status plants. **Figure 7** shows representative site photographs of the open space preservation area.

Preservation of Contiguous Core Habitat

The main goal of this OSPP amendment is to set aside a core of connected habitat that provides environmental benefits such as plant and wildlife dispersal and refugia. The 2008 OSP defines this large block of habitat as a "core" that protects dispersal and interactions between species from the disturbances of potential development. While the open space is not by definition a wildlife corridor and is not intended to function as such, it does provide a continuous passageway through the development.

The proposed acreage of open space preservation includes the portion of Bucksnort Creek and associated habitat from the existing open space plan through to the northern property boundary. The original OSPP included much of Bucksnort Creek due to the dispersal value offered by riparian passageways, but did not include this natural corridor to its fullest extent (**Figure 4**). By incorporating additional portions of Bucksnort Creek, the modified open space provides a more complete and continuous corridor that captures the full value of this natural passageway. Additional benefits of this core preservation include increased opportunity for species recovery, an undisturbed scenic vista, and ecosystem functions such as groundwater recharge that require larger areas of dedicated undisturbed space.

Conservation of Special-Status Plants

Acreage proposed for inclusion in the open space preservation area targets known locations of special-status plants identified in the 2009 EIR, as well as from biological surveys conducted since the approval of the 2008 OSP (WRA, 2019a; WRA, 2019b; WRA, 2019c). Information provided by recent biological surveys has allowed for greater inclusion of special-status plants within the OSPP. A total of nine special-status plants have been observed on the Ranch: Colusa layia *(Layia septentrionalis*), Green jewelflower (*Streptanthus hesperidis*), Greene's narrow-leaved daisy (*Erigeron greenei*), Keck's checkerbloom (*Sidalcea keckii*), Konocti Manzanita (*Arctostaphylos manzanita ssp. elegans*), Lake County western flax (*Hesperolinon didymocarpum*), Narrow-anthered brodiaea (*Brodiaea leptandra*), Three peaks jewelflower (*Streptanthus morrisonii ssp. elatus*), and Two carpellate western flax (*Hesperolinon bicarpellatum*).

The proposed boundaries of the open space preservation area includes representation of seven special-status plant species that have been identified on the Ranch. Of these plants, one was not included in the original open space preservation area: federally endangered Keck's checkerbloom. **Table 4** outlines special-status plants that occur within the existing and proposed open space preservation area. In addition to the inclusion of additional special-status plants, the proposed open space preservation area expands the overall acreage of known special-status plant locations included within open space. Those special-status plants not included within proposed open space occur on a portion of the Ranch offset from the Proposed Project and the existing open space preservation area.

TABLE 4
SPECIAL STATUS PLANTS WITHIN OPEN SPACE MODIFICATION

Special Status Plant	Status	Presence within 2008 OSP	Presence within Proposed OSPP
Colusa layia	CNPS 1B.2	Yes	Yes
Green jewelflower	CNPS 1B.2	Yes	Yes
Greene's narrow-leaved daisy	CNPS 1B.2	Yes	Yes
Keck's checkerbloom	Federal Endangered, CNPS 1B.1	No	Yes
Konocti Manzanita	CNPS 1B.3	No	No
Lake County western flax	State Endangered, CNPS 1B.2	Yes	Yes
Narrow-anthered brodiaea	CNPS 1B.2	Yes	Yes
Three peaks jewelflower	CNPS 1B.2	No	No
Two carpellate western flax	CNPS 1B.2	Yes	Yes

CNPS Rank 1B – Plants Rare, Threatened, or Endangered in California and Elsewhere
CNPS Rank 2B – Plants Rare, Threatened, or Endangered in California, But More Common Elsewhere

Threat Rank 0.1 – Seriously Threatened in California
Threat Rank 0.2 – Fairly Threatened in California
Threat Rank 0.3 – Not Very Threatened in California

Preservation of Sensitive Habitat

Habitats that are considered sensitive are also considered priority preservation areas in the 2008 OSP. In the proposed open space preservation area, special attention was given to the nearby sensitive habitats that were not included in the original open space area. The proposed open space preservation area includes a significant increase in valley oak woodland inclusion. Valley oak woodland is a CNPS state rank "vulnerable" vegetation alliance and CDFW state rank "Vulnerable-Sensitive." The Ranch contains areas of valley oaks that are long-lived and mature, therefore, this habitat is considered a priority for preservation.

Adjacent high-quality habitat suitable for valley and other oak planting is included in the proposed open space to provide suitable habitat restoration areas should individual oak trees be impacted elsewhere on the Ranch. Oak woodlands within the open space preservation area may also be considered oak woodland preservation areas for the sake of mitigating for the Proposed Project's impacts to oaks. This provides additional assurances that those oak woodland areas are preserved in perpetuity. Inclusions to the open space preservation area include sensitive habitat types such as those with serpentine soils, rare plant areas, and riparian corridors. This includes an increase in represented wetlands and stream habitat, as well as associated riparian vegetation such as white alder groves.

Inclusion of High-quality Habitat

Protection of high-quality habitat increases biodiversity and improves ecosystem stability through a native, undisturbed environment. Biological surveys around Bucksnort Creek and other areas proposed for inclusion into open space have identified active nests, special-status plants and animals, and potential habitat for additional species not observed during surveys (WRA, 2019a; WRA, 2019b; WRA, 2019c). Addition of these areas maximizes the environmental and aesthetic benefits of the open space preservation area.
