For example, trap EV241-8-EG1 is in grid EV241, subgrid 8, trap type is European grapevine moth (EG), and it is designated as number “1” EG trap within that subgrid (applicable only if more than one trap of the same type is in a subgrid).
 - b. Ensure that the unique trap number is placed properly on the outside of all traps, along with accurate placement, servicing, baiting, and rebaiting dates, and the trapper's initials for each activity.
9. Ensure that all sites trapped are GPS'd using Datum NAD83 in decimal degrees to 6 decimal points (e.g., 34.423301, -119.825056). Record GPS reading on the trap data card. New GPS points must be recorded for traps if they are relocated.

10. Ensure that all traps removed from the field are screened for EGVM suspects a second time at the trapping office by a supervisor or other qualified staff before disposal.
11. Participate in new delimitation activities if requested to do so by the CDFA.
12. Ensure that all activities are performed following CDFA's management practices and any necessary mitigation measures as required and consistent with CDFA's PEIR. A summarized list of pertinent practices and measures, PEIR Management Practices (MP) and Mitigation Measures (MM) for Trapping, is available from the CDFA District Entomologist. A Tiering Checklist must be completed prior to conducting trapping activities. A Checklist template is provided along with this agreement, which is to be completed and submitted to the PD/EP County Contracts Coordinator (CCC), currently Rudy Martinez (rudy.martinez@cdfa.ca.gov), at PD/EP headquarters. When the agreement ends, the county signs and dates a copy of the Checklist and sends that copy to the CCC to signify that the PEIR requirements were implemented. A blank Checklist and detailed descriptions of the CDFA's management practices and mitigation measures are found in PEIR Appendix C (PEIR, Appendix C, at http://www.cdfa.ca.gov/plant/peir/docs/final/Volume-3_Appendices_B-G.pdf), Mitigation Reporting Program at http://www.cdfa.ca.gov/plant/peir/docs/final/Volume-4_Appendices_H-P.pdf, and Findings of Fact at <http://www.cdfa.ca.gov/plant/peir/docs/final/Findings-of-Fact-and-Overriding-Considerations.pdf>.
13. Ensure that trap data is entered into the United States Department of Agriculture (USDA) Integrated Plant Health Information System (IPHIS), as detailed in the EGVMTG.
14. Maintain a Daily Trapping Summary (DTS) (Form 60-210) for each trapper. This form must be completed daily, signed by the individual who performed the work and submitted to the trapping supervisor. The current DTS (i.e., the DTS completed the day prior to a QC inspection) must be available for immediate review by the CDFA District Entomologist or designee conducting the QC inspection. All DTS forms must be kept on file, for the CDFA Audits Office, for three years. This form is available from the District Entomologist.
15. Complete a monthly Pest Detection Report Number One (Form 66-035), documenting all traps deployed, added, removed and serviced during the month. A servicing is an inspection of the trap for the presence of the target pest. Relocations are considered trap servicing. Do not count trap relocations as "removed" and then "added." A copy of this form must accompany the monthly invoice. This form is available from the District Entomologist.
16. Provide one set of trapping records for all traps. This set, in the form of either the "Trap Book" or electronic records, shall indicate the exact trap location using a

site map and all information regarding trap placement, servicing, baiting, relocation and removal.

17. Maintain an inventory of known host sites. The inventory shall be organized by square mile, contain the addresses of host properties traceable to the nearest cross street, and indicate all known hosts on that property. The inventory shall be updated yearly. The multiple trap card system will suffice for this inventory. This inventory must be available for the trapper to use in the field daily.
18. Attend trainings on the use of an electronic trapping database being developed, called CalTrap. Participate in implementation of CalTrap when it becomes operational for your county.
19. Allow CDFA detection personnel and/or USDA officers to perform quality control inspections on all EGVM trap lines with a 48-hour notice.
20. Allow CDFA detection personnel and/or USDA officers to accompany trappers and/or supervisors in the field on a 48-hour notice. This will be credited as field training for county personnel.
21. Provide vehicle accountability in the form of a log to include vehicle license plate number (or other identifying number), dates vehicle used on the EGVM project, daily mileage, and employee name.
22. Submit EGVM samples to the Plant Pest Diagnostics Laboratory in Sacramento via the most expeditious method. See **Submitting Specimens for Identification** in the EGVMTG for more information.
23. Submit invoices along with the corresponding Report Number One monthly by postal mail or e-mail to the County Contracts Coordinator:

Rudy Martinez
CDFA - PD/EP
2800 Gateway Oaks Drive
Sacramento, CA 95833
rudy.martinez@cdfa.ca.gov

- a. Submit monthly invoices and corresponding Report Number Ones no later than 30 days past the end of the month in which the invoiced activity occurred. Reimbursement will not occur unless the trapping Report Number One is submitted with the invoice.
- b. If the invoice carries a signature block, the block must be signed. Invoices with blank signature blocks cannot be processed.

- c. Only authorized charges matching the Financial Plan will be reimbursed; for example salaries, benefits, overhead, supplies, vehicle mileage and vehicle leasing costs. These expenditures must be itemized on the invoice with documentation to support the charges in the event of an audit (federal or state). Any expenditure that is not listed in the Financial Plan is considered unauthorized and cannot be reimbursed.
- d. A sample invoice is available from the District Entomologist. The county may use this form or submit their own invoice, but the invoice must contain the following:
 - i. County name
 - ii. Remit to address
 - iii. Date of submittal
 - iv. Invoice number
 - v. Agreement name
 - vi. Agreement number
 - vii. Billing period
 - viii. Employee name (or other unique identifying number), classification, hours worked on the pest detection program, hourly rate, benefit rate. NOTE: The number of hours worked claimed on the invoice must match those documented on the Report Number One.
 - ix. Vehicles license plate number (or unique identifying number), driver name, ownership of the vehicle (county, state, or leased), allowable mileage rate for the vehicle, and if leased, the monthly lease rate for the vehicle.
- e. Payment of the invoice is contingent upon submission of the Report Number One, and compliance with the required information as listed in item 2.24.c.
- f. All invoices, including any amendments, must be received within 30 days of the expiration date of the agreement. Invoices received more than 30 days after expiration of the agreement will not be paid.
- g. Please do not submit the invoice as a PDF file or use dark highlights. A low resolution PDF file or dark highlights may make the numbers illegible and the invoice unacceptable to the CDFA Financial Services Branch.
- h. Payment will be made monthly, in arrears, upon receipt of the Report Number One and approval of invoice.
- i. Please note that CDFA cannot reimburse for more than the total agreement amount. However, continue to send monthly invoices even if agreement funds are depleted, as this can be useful information for future budget allocations.

EUROPEAN GRAPEVINE MOTH (EGVM) TRAPPING GUIDELINES

Fiscal Years 2019-20 and 2020-21

1. Eligible Counties - Any county with commercial grape acreage that has previously been in the EGVM program.
2. General Trapping Instructions - Conduct trapping as per the Insect Trapping Guide (ITG), available at www.cdfa.ca.gov/go/ITG, and as outlined below. Should a conflict arise between the ITG and an item in these Guidelines, the Guidelines take precedence.
3. Trap - The trap consists of three parts: the red delta trap body (red is not attractive to honey bees), lure (rubber septum) and the trap hanger or zip tie.
4. Attractant - The attractant for EGVM is a male sex pheromone. This lure acts primarily as a male attractant. The lure does not contain any insecticide.
5. Trap Assembly and Numbering
 - a. Traps will arrive fully assembled and the lure will be placed inside the trap by the trapper. The county may request unassembled traps if they are able to fold and assemble traps themselves.
 - b. Write the trap number and date of deployment on the trap body prior to placing the trap.
 - c. Trap numbers for EGVM will include the five-digit alpha-numeric grid number, subgrid designation, the identifying letters "EG.", and trap number within the subgrid (if applicable). For example: EV241-8-EG1.
 - d. To prevent contamination of other surfaces, avoid direct contact with the pheromone lure or the inside surface of the pouch.
 - e. Open the lure pouch; squeeze the lure directly into the trap, securing it onto the stickum on the bottom of the trap or use forceps to place it. Discard the empty packet in a manner approved by the trapping office.
 - f. Do not dispose of lures or lure packages in the field. All trapping materials are to be disposed of at the inspector's field station.
6. Trapping Season
 - a. Deployment should be completed by March 15, 2020, or as soon as weather permits after that date.
 - b. Remove traps during the first servicing after August 31, 2020.
7. Hosts to be Trapped - Grapes.

8. Density

- a. Place up to 25 traps per square mile (1 trap per 25.6 acres).
- b. In square miles with a mix of vineyards and non-vineyards, the number of traps deployed in the vineyards is prorated based on the equivalent density of commercial grape acreage in that square mile.
- c. Relative to 2019, lower-risk grids may be left untrapped or trapped at a reduced density at the Commissioner's discretion in consultation with the District Entomologist. Grids with or near grape processors, crush facilities, wineries, and vineyard management companies that handle or receive host material should continue to be trapped at 25 traps per square mile if possible.

9. Trapping Locations

- a. Place traps in commercial grape vineyards.
- b. Use a 5x5 subgrid overlay, placing up to one trap per subgrid.
- c. For vineyards where the shortest dimension of the vineyard (width or length) is more than 1066 feet (325 meters), place the traps within the vineyard in order to space them as uniform as possible within the square mile.
- d. Place at least one trap in all vineyards within 300 meters of any grape processing facilities, even if this results in more than one trap per subgrid.

10. Trap Placement

- a. Vineyards – Place traps at the end of the rows of the major vineyard thoroughways, preferably at canopy height. Hang them from the vine support wires using zip ties or support poles away from the branches of the vines (unobstructed). As the vine grows, move the trap up higher so that it is in proximity of the flowers and fruit. It is also acceptable to hang the trap from metal Japanese beetle poles or from the branches of the vines. Avoid hanging any trap from small branches or cordons to minimize trap loss due to harvest, maintenance, pruning, or vine growth.
- b. In rare cases, where access to a vineyard cannot be obtained but it is deemed necessary to trap that vineyard, proximity trapping may be used. That is, the trap may be placed on a non-host or other structure outside the vineyard, but it must be no more than 20 feet from a vine.
- c. Priority should be given to areas within 300 meters of grape processing facilities (e.g., wineries).
- d. Ensure traps are at least 20 meters (65 feet) from any other trap that contains a pheromone lure for a different moth target species.
- e. Place traps in open spaces, unobstructed by branches or leaves. Align traps so that they are parallel to the vine row.
- f. Open the ends of the trap. The openings must be free from obstructions; this will allow airflow and dispersal of the pheromone.

- g. GPS the site and enter the data onto the trap card, for entry into the USDA's Integrated Plant Health Information System (IPHIS) (see below).
- 11. Inspection Frequency - Service the traps every two weeks, unless directed otherwise. If pesticide treatments or other factors in the vineyard preclude servicing a trap, document the missed servicing in both the trap book and IPHIS.
- 12. Baiting Interval - Replace the lure every four weeks. Old lures can be left in the trap until the trap is replaced, if they are not unduly obstructing access to the sticky surface.
- 13. Trap Replacement
 - a. It is recommended that traps be replaced at eight weeks under normal conditions. However, traps should be replaced earlier if dust, plant debris, or an excessive number of trapped non-target insects reduces the ability of trap to capture EGVM or inhibits the ability to screen for suspect EGVM.
 - b. Zip ties used to hang the traps should be reused, if not damaged.
- 14. Relocation
 - a. Do not relocate traps unless access to the trap is impaired for more than one servicing.
 - b. As the vines grow, move traps to the upper third of the vine, as practical
 - c. Follow all pesticide regulations before entering a vineyard that has been treated.
 - d. If a trap is relocated, GPS the new site and enter the data into the IPHIS database.
 - e. When relocating, always use a new trap.
- 15. Data Entry into IPHIS
 - a. Trap data must be entered into the USDA Integrated Plant Health Information System (IPHIS).
 - b. All sites trapped must be geocoded using Datum NAD83 in decimal degrees to 6 decimal points (e.g., 34.423314, -119.825056). If there are more than six digits, please truncate the figures (do not round up or down). The minimum information recorded in the global positioning system (GPS) unit is trap number, placement date, and degree decimal waypoint reading. New GPS points must be recorded if EGVM traps are relocated.
 - c. New GPS values must be taken and recorded for 2020. Do not re-use the 2019 GPS coordinates even if the 2020 trap site is utilizing a previously used map and trap card.
 - d. All GPS points will be verified by the United States Department of Agriculture (USDA) prior to being entered into IPHIS. Following completion of trap

- placement, submit GPS points on an Excel spreadsheet (include county, trap number and GPS points) to William Yoder at William.E.Yoder@usda.gov.
- e. Enter weekly trapping data reports into the United States Department of Agriculture (USDA) Integrated Plant Health Information System (IPHIS). If this cannot be accomplished, send weekly reports for entry into IPHIS to Matt Kaiser (matthew.kaiser@cdfa.ca.gov). Weekly submission of data reports is required in order for reimbursement to be processed.
16. Maps - Counties must use maps displaying the square mile grid and appropriate subgrids as determined by the California Department of Food and Agriculture (CDFA). If needed, maps or the geographic information system (GIS) layers will be provided. If the county has the ability to produce these, verify the accuracy with the CDFA before use.
17. Trap Double-Screening - All traps inspected and removed from the field shall be screened for EGVM suspects a second time at the trapping office by a supervisor or other qualified staff before disposal.
18. Submitting Specimens for Identification
- a. The entire trap containing the suspect moth should be collected and returned to the office for supervisory inspection. Before leaving the site, replace the old trap with a new one.
 - b. The trapping supervisor should contact the District Entomologist when suspect moths are discovered. Send suspect specimens to Sacramento by the quickest means possible.
 - c. Submit the entire trap, leaving the suspect moth in the trap, for identification to the CDFA Plant Pest Diagnostics Laboratory, 3294 Meadowview Road, Sacramento. If the suspect moth is alive in the trap, place the trap in the freezer for at least one hour to kill the moth. Do not send live specimens!
 - d. All suspect specimens should be submitted along with Form 65-020, the electronic version of the Pest and Damage Report (e-PDR). The website for the e-PDR is <http://phpps.cdfa.ca.gov>. Persons completing this form will need a username and a password.
 - e. Notify Jason Leathers (jason.leathers@cdfa.ca.gov) and Matt Kaiser (matthew.kaiser@cdfa.ca.gov) via email upon all submissions. Include the e-PDR number in this communication.

PEIR Management Practices (MP) and Mitigation Measures (MM) For Trapping

July 2019

MP-SPRAY-2: Properly clean and calibrate all equipment to apply chemicals uniformly and in the correct quantities.

- Use dedicated specific equipment for specific products when appropriate.
- Ensure equipment is cleaned properly per the manufacturer's specifications and any pesticide label directions.

MP-SPRAY-3: Follow pesticide application laws and regulations, and label directions.

- Comply with Pesticide label.
- Be aware of any regulations or internal procedures before application.
- Use appropriate application methods and rates.
- Mix and load chemicals in areas where spills can be contained. Limit mixing and loading in the field.

MP-SPRAY-6: Clean equipment and dispose of rinse water per label directions.

- Rinse equipment according to manufacturer's label instructions.
- Discharge rinse water only in areas that are part of the application site or at a certified waste treatment facility.
- Dispose of surplus chemicals and containers according to label instructions.

MP-SPRAY-7: Follow appropriate product storage procedures.

- Ensure proper storage of all pesticides per label instructions.
- Ensure all pesticides removed from their original container are properly sealed for use within a service container.
- Seal all service containers within a tool box.
- Lock tool boxes when unattended.

MP-GROUND-3: Train personnel in proper use of pesticides.

- Conduct training for personnel in the safe and proper mixing, loading, and application of pesticides, in compliance with both federal and State pesticide regulations and the product label.

MP-HAZ-1: Implement a Spill Contingency Plan.

- Contain spill immediately to minimize the risk of further pesticide exposure to people, animals, and the environment.
- Be prepared to respond to pesticide spills.
- Provide clean-up of small spills (50 gallons or less) and properly dispose of residual materials. For larger spills notify the Chemical Transportation Emergency Center at 800-424-9300.
- Follow instructions for First Aid Measures as listed on the Material Safety Data Sheet.
- Call an ambulance in the event of a spill involving severe personal injury.
- Remove anyone exposed to pesticides to a safe location. If applicable, remove their clothing and wash contaminated skin with soap and water.
- Do not move a seriously injured person unless it is absolutely essential because of the risk of further injury.

- Do not leave injured or incapacitated persons until proper medical assistance arrives.
- Provide a pesticide label and/or material safety data sheet for medical personnel.
- For any spill incident, contact the California State Warning Center/Governor's Office of Emergency Services at 916-845- 8911 or warning.center@oes.ca.gov.
- Call the fire department and notify department personnel of the presence of pesticides for a spill involving fire, if a fire hazard exists. Eliminate all sources of ignition (electric motors, gasoline engines, or smoking) to prevent fire or explosion.
- Contact the California Highway Patrol by calling 911 for a spill occurring on a highway.
- Call local police or the county sheriff for a spill occurring off-road.
- For minor spills of 50 gallons or less:
 - Wear rubber boots, coveralls, rubber gloves, and eye protection.
 - Confine the leak or spill to the smallest area possible by using natural terrain, soil, or absorbent material.
 - Shovel contaminated material into a leak-proof container.
 - Do not hose down the area.
 - Work carefully and safely; do not hurry.
 - Dispose contaminated material in the same manner as for excess pesticides or hazardous wastes.
- For major spills of 50 gallons or more:
 - Follow the steps listed for all above and include the additional number below.
 - If the spill is too big, or uncertainty exists as to the appropriate action, notify the Chemical Transportation Emergency Center at 800-424-9300.

MP-HAZ-2: Use a safety and cleanup materials checklist.

- Follow a checklist for safety and cleanup materials to accompany mixing-loading vehicles during treatment activities, which should include the following:
 - For Safety: a first-aid kit; a fire extinguisher (516, type A-B-C), and goggles.
 - For Clean-up: one shovel, large heavy-duty plastic bags, rubber boots, disposable coveralls, water, rubber gloves, a broom and dust pan, liquid detergent, several bags of "kitty litter" or other absorbent materials.

MP-HAZ-3: Implement decontamination.

- Decontaminate paved surfaces per site specific protocols and Accidental Release Measures on the Material Safety Data Sheet.
- Shovel contaminated material into a leak-proof metal drum for final disposal.

MP-HAZ-4: Follow appropriate disposal procedures.

- Dispose all materials that have been contaminated by spillage or exposed to large volumes of pesticides, including cloth, soil, and wood that cannot be decontaminated, in the same manner as done for excess pesticides.
- Store contaminated absorbent material and materials that cannot be

decontaminated in a leak-proof container and dispose the container at a Class I landfill.

Mitigation Measure HAZ-GEN-4a: Determine Potential for Hazardous Materials Exposure.

- Before conducting any activities under the Proposed Program, CDFA staff (or the entity conducting the activity) shall determine whether the potential exists for the activity, based on its characteristics and location, to result in exposure to existing sites of hazardous materials contamination.

Mitigation Measure HAZ-GEN-4b: Conduct a Hazardous Materials Records Search before Beginning Proposed Program Activities at a Given Site.

- If exposure to hazardous materials contamination is determined to be a possibility, before conducting the activity under the Proposed Program, CDFA staff (or the entity conducting the activity) shall search the EnviroStor database to identify any area that may be on sites containing known hazardous materials. If hazardous sites are encountered, CDFA shall coordinate with the property owners and/or site managers, and regulatory agencies with jurisdiction over these sites for proper protocols to follow to protect worker health and safety. At a minimum, these protocols shall ensure that workers are not subjected to unacceptable health risk or hazards, as determined by existing regulations and standards that have been developed to protect human health.

Mitigation Measure HAZ-GEN-4c: Stop work and implement hazardous materials investigations/ remediation for contamination health risks.

- In the event that during the activity, previously unknown hazardous materials not related to the Proposed Program are encountered that may pose a health risk to those implementing Proposed Program activities, all activities will stop and CDFA (or the entity conducting the activity) shall consult the landowner and appropriate agencies to determine the extent of the hazardous material and determine what safety protocols need to be implemented to continue Proposed Program activities. At a minimum, these protocols will ensure that workers are not subjected to unacceptable health risk or hazards, as determined by existing regulations and standards that have been developed to protect human health.

Mitigation Measure HAZ-CHEM-1a: Conduct Public Information Sessions Regarding Pesticide Safety Practices.

- CDFA shall continue to work with CDPR and CACs to conduct public information sessions in the local communities where Proposed Program chemical management activities are proposed to be conducted. The focus will be on educating residents whose properties are being treated or who live in proximity to areas being treated on MPs for pesticide applications, including an emphasis on notification, signage, re-entry periods, potential adverse health effects, and how to seek proper help if an accident is suspected. As necessary, sessions will be conducted or translated in a language understood by the target audience, such as Spanish.

Mitigation Measure HAZ-CHEM-1b: Conduct Training Sessions and Prepare Educational Materials Regarding Safe Handling and Application of Pesticides.

- CDFA shall continue training sessions for its staff and contractors

regarding safe pesticide handling and application.

- In addition, for quarantine areas, CDFA shall include materials in its compliance agreements with regulated entities (e.g., growers) with information for pesticide applicators and agricultural workers regarding MPs for pesticide applications, including an emphasis on notification, signage, re-entry periods, potential adverse health effects, and how to seek proper help if an accident is suspected. A regulated entity is defined as someone who has to comply with the quarantine requirements in order to move their products outside of the regulated area. This may include but not be limited to growers, nurseries, and commodity shippers. The compliance agreements will require that regulated entities distribute these materials to applicators and workers.
- As necessary, all materials will be presented in a language understood by the target audience, such as Spanish.

Mitigation Measure HAZ-CHEM-3: Require Compliance with the Proposed Program's Authorized Chemical Application Scenarios.

- CDFA shall require Proposed Program staff and contractors to conduct chemical applications in a manner consistent with the Proposed Program's authorized chemical application scenarios, resulting in acceptable human health risk as described in Chapter 2, Proposed Program Description and the HHRA (Appendix B). Deviations from the authorized chemical application scenarios may be allowed if:
 - An evaluation is conducted pursuant to the CEQA Tiering Strategy (Appendix C), which concludes that the alternative scenario will not exceed the level of concern for any receptor; or
 - A certified industrial hygienist concludes that the alternative scenario will not result in risk exceeding the level of concern for any potential receptor, and the scenario is implemented by a licensed or certified applicator. This conclusion may be based on site-specific factors that minimize potential for exposure, absence of a particular receptor, use of additional or different PPE, or monitoring of the exposure, such as regular blood tests to ensure blood concentrations in the exposed individuals are below the risk threshold.
 - The results of the evaluation or hygienist's conclusions will be documented, along with any monitoring results.
 - CDFA will conduct training for its staff and contractors on these approaches. CDFA also will require adherence to these scenarios by including requirements in contractual agreements, such as compliance agreements (for quarantines), permits (e.g., for movement of certain materials outside quarantine areas), contracts (e.g., with CDFA contractors), or other similar means.
